saving water.

NovoSix

Water saving showering solutions for hotels

with **isoflow**

- **Multi-functional shower head with 6 spray patterns**
- **Constant volume flow beyond a given water pressure**
- **Fast payback from water saving**
- **Reduced lime-scale build up**

The NovoSix hand held shower head not only provides low water usage but provides six different spray patterns ranging from a strong massaging jet to one that is soft and relaxing.

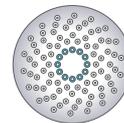

The NovoSix is ideally suited for the hotel and commercial sector where shower users will change frequently with each one having their own shower pattern preference. The wide range of settings ensures that everyone will find one to meet their requirements.

The patented isoflow flow rate control technology keeps the water flow constant independent of water pressure once the limit is reached. Water flow can be maintained at either 10 l/min or 8 l/min depending on desired volume usage.

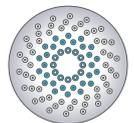

The shower head is robustly constructed and finished off in chrome. The design and material selection ensure lime-scale build up is reduced.

What is isoflow?

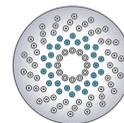

isoflow is a unique, patented design that protects the O-ring from the water and ensures water flow is precisely controlled whilst having a long service life.
