COATINGS

SPECTRUM® **GREEN**

Spectrum® **GREEN** is a bio-based coating with a thickness of 50 µm in which the fossil component has been replaced with rapeseed oil. UV resistance of RUV4 and corrosion class RC5+ makes Spectrum® **GREEN** an ideal solution for a wide variety of applications.

SPECTRUM®

Spectrum® is a polyurethane coating with a thickness of 50 µm that delivers aesthetic brilliance and guaranteed performance in a variety of applications.

PVDF

PVDF (polyvinylidene fluoride) is fine-looking exterior coating featuring colour purity, strength, resistance and stability. PVDF coatings vary in thickness from 27 µm to 45 µm and consist of 2 or 3 layers of paint.

CLEANsafe

CLEANsafe coatings have particular properties suited to different environments. CLEANsafe 25 - standard applications, CLEANsafe 120 and CLEANsafe 304/316L - food-safe, controlled environments, and special applications.
