

Technical specification

Triple Walled Polycarbonate

Blocks 99.9% of UV A & B rays

100% waterproof

The 16mm triple clip polycarbonate system is used to create a hard wearing roof covering for our canopies.

They are designed for an endless range of glazing and roofing applications, for extreme weather conditions, and are known for their light-transmitting (32%) and reflective qualities. They are attractive, durable, and easy to install.

Fordingbridge's polycarbonate clad structures all conform to Class B non fragility standards in accordance with ACR (M) 001.2014 – Fifth Edition test for non-fragility of profile sheeted roofing assemblies. The polycarbonate is guaranteed for 10 years.

Characteristics

- Blocks 99.9% of UV A & B rays
- Fast installation
- High longevity
- Impact resistant (ASTM D-1003)
- Simple maintenance

Polycarbonate

A hard roof option to create large covered spaces
