

RA-URX Towel Rail Valves

## Accurate and aesthetic

The perfect finishing touch  
to your towel rail

- A range of bathroom solutions specifically designed for towel rails
- Modern, aesthetically pleasing design
- Innovative self-sealing valve to radiator connection reduces installation time
- Self-sealing valve
- Lockshield valve offers drain-off feature and matching cap

### Innovative self-seal connection

ensures that the valve  
to radiator connection  
is easy and seamless.

## Bathroom Solutions RA-URX

Designer radiators and bathroom towel rails are growth areas in the heating market. Danfoss offers TRV's that are aesthetically pleasing and easy to install.

### Thermostatic Towel Rail Valves

The new luxury RA-URX is a valve specifically designed for towel rails. Its completely new and innovative self-sealing 1/2" valve to radiator connection makes for a seamless, elegant and easy installation.

### Radiator Thermostat

A room temperature sensor, developed with the purpose of controlling the room temperature in bathrooms where the towel rail is the primary source of heating. Both towel rail valve sets includes a matching lockshield valve with drain-off function.

The valves and sensors are available in white and a highly polished chrome version, matching the most common towel rail colours. The elegant RA-URX range provides the perfect finishing touch for towel rails. The aesthetically pleasing and compact design allows the sensor to be mounted underneath the towel rail, parallel with the wall, avoiding the risk of accidentally knocking the sensor.

### Return Temperature Limiter

Ideal for applications, where the towel rail is the secondary source of heating and where keeping the towel rail warm, disregarding the room temperature, is a priority. To ensure that towels are always warm and dry, the RTX measures the temperature on the return flow, which can be adjusted independent of the room temperature.

### VHS-UN

The VHS valve is specifically designed for use with towel rails or designer radiators, having 50mm spaced connections.

The VHS valve, which is available in versions with either bottom connections for pipes rising from the floor or with back connections for pipes coming from behind, integrates the functions of radiator thermostat, lockshield valve and connection system into one compact, easy to install unit.

The valve can be used together with RAS-C<sup>2</sup> or RAS-D<sup>2</sup> sensors. In addition a snap-on cover can be added to enhance the aesthetic appearance.

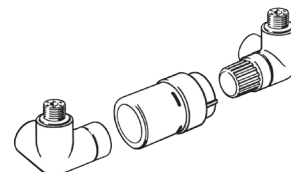

### Available colours

- Valve screws directly into towel rail, completely hiding the tail piece
- Valve is self-sealing, reducing installation time
- Lockshield valve offers drain-off feature and matching cap
- Standard Danfoss drain-cock can be used

RTX sensor, RA-URX left mounted and RLV-X right mounted.

RTX sensor, RA-URX right mounted and RLV-X left mounted.

RA-URX Set <sup>(1)</sup> complete with TRV valve body & sensor plus lockshield valve	Chrome	Bright White RAL 9016	Temp. Range Xp = 2°C
	Code No		
RAX Left Mounted Sensor <sup>(2)</sup>	013G400400	013G400800	8 - 28°C
RAX Right Mounted Sensor <sup>(2)</sup>	013G400300	013G400700	
RTX Left Mounted Sensor <sup>(2)</sup>	013G413300	013G413700	10 - 50°C
