

## LiquidGuard® for Keylex

...break the hand-surface-hand  
infection cycle

Unless doors are fully automated, door hardware is one of the few surfaces within any built environment where hand to surface interaction is unavoidable.

To address this concern, Relcross Door Controls now offers optional additional antimicrobial protection (both pre and post installation) on many of its products - including lever sets, exit hardware and the complete Keylex Mechanical Digital Lock Range:

**Keylex 2100 Series | Keylex 900 Series | Keylex 700 Series | Keylex 500 Series**

Liquid Guard® can be applied to individual hardware items or in bulk as required. Please call the Sales Office (01380 729600) to discuss your requirements - including prices.

**Liquid Guard®**  
**antimicrobial coating applied**

additional information available here  
[www.nano-care.co.uk/](http://www.nano-care.co.uk/)

Liquid Guard® self-disinfecting wipe-on glass coating is the newest generation of surface protection that ensures all surfaces stay clean. Not only does it repel liquids and dirt and prevent micro-scratches, it boasts also an antimicrobial function that kills viral and bacterial pathogens that come into contact with hard surfaces - including door hardware. This antimicrobial nano-coating is certified to kill enveloped viruses on contact – 24/7, 365 days of the year.
