

## Telehouse North Two

*ACO delivers 316mm pipe solution for London datacentre*

Telehouse North Two is the fifth London-based data centre to be opened by Telehouse. Based in the Docklands area of the city, Telehouse North Two has more than 8,000 sq ft of secure collocation space and is one of the most advanced data centres in Europe.

### THE PROJECT

The new data centre forms part of Telehouse's London Docklands campus which has access to 73,400 sqm of space, has over 530 carriers, ISPs and ASPs, and is Europe's leading connectivity hub.

### THE BRIEF

Contractors DH Stainless asked ACO Building Drainage to provide a high quality stainless steel pipe solution which could cope with the site's proximity to salt water. They also needed the pipe to be delivered to site during a set two week timeframe.

### THE SOLUTION

ACO Building Drainage delivered 316mm stainless steel pipe to site within the given timeframe and budget. Manufactured to the very highest standards, ACO PIPE® products are pickle passivated as standard for optimum long-term durability, virtually zero maintenance and an estimated product life of 50 years. They are also fully compatible with ACO gully and channel systems.

Carl Green of DH Stainless said: *"This was the first time we worked with ACO Building Drainage. We are delighted by the quality of products and the service they provided. They delivered high*

*quality stainless steel products to site quickly, efficiently and within budget, and we're delighted to be working in partnership with them going forward."*

The ACO PIPE® range includes pipe products from 50mm to 250mm in diameter and a comprehensive range of accessories. Of a lighter weight than pipe made from other traditional materials, ACO PIPE® products benefit from a push-fit design to minimise cut, fit and assembly time, and ease commissioning post installation. Stock levels mean that delivery to site can usually be made within two weeks of order.

## COMMERCIAL & INDUSTRIAL DRAINAGE

We recognise that when you're looking for a drainage system for an industrial or commercial facility, the drainage you choose needs to complement the building's design and look as good as it performs.

Manufactured from fully pickle passivated stainless steel, our drainage systems combine aesthetic appeal with high performance, corrosion resistance and durability. The range is complemented with a comprehensive range of pipe products and accessories. We also employ an in-house design team who use their expertise to provide technical support at every stage of your project.

Our drainage is used across a wide range of commercial and industrial applications including: manufacturing and industrial sites; logistics facilities; offices; supermarkets, and shopping malls.

## SECTORS IN WHICH WE OPERATE

ACO Building Drainage specialises in the development and manufacture of high performance drainage systems for a wide range of sectors including:

- Commercial Kitchen
- Food & Drink Manufacturing
- Hotels
- Infrastructure
- Commercial & Industrial
- Education
- Sport & Leisure
- Healthcare
- Residential Development
