PRODUCT & COLOUR GUIDE

About Sandtex

There may be several brands in the construction industry boasting a 50 year pedigree, but few claim to serve the very same purpose today as they did when they first appeared in the market. Sandtex® however has stayed true to its origins, and continues to serve the same industry needs in very much the same way as it did in 1961, ie protecting and decorating the nation's external substrates using a system approach.

Originally for sale from the Cement Marketing Company Limited (later to become Blue Circle Industries) in 1961, Sandtex Matt and Sandtex Textured were the two decorative finishes available in the system.

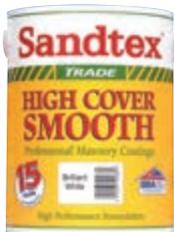

Over the decades Sandtex has gone from strength to strength and with the launch of a brand specially developed for professionals. The Sandtex Trade brand and its product portfolio has benefited from extensive investment in research and development, and features state of the art coatings technology. That's why you will find BBA accreditations and anti-carbonation certificates, which ensure our formulations include the most durable, weather resistant and lightfast products money can buy. The Sandtex Trade system now consists of products that encompass wood, metal and even uPVC as well as stone, brick, pebbledash and render, and of course concrete which is where it all began.

TOP TIP

ENHANCES CLASSICAL ARCHITECTURAL FEATURES AND DETAILING

FOR MASONRY & ARCHITECTURAL FEATURES

WATER BASED | GLOSS FINISH

A premium protective and decorative smooth gloss finish for use on most exterior surfaces including those that may have been painted with a solvent based gloss paint.

- More durable alternative to conventional alkyd gloss systems
- Good gloss and colour retention
- Moisture vapour permeable
- Can be used over weathered solvent based finishes

For technical reasons connected with colour reproduction, the colours shown may not exactly match the paint colours and do not represent a particular finish

CASE STUDY

Sandtex Trade 365 Tackles Cumbrian All Weather Challenge

When South Lakes Housing Association refurbished 276 fully rendered properties in the depth of the Cumbrian winter, Sandtex Trade 365 All Weather Masonry Paint helped keep work on schedule.

The majority of the work to the properties on the Kirkbarrow Estate in Kendal started in November 2014 and finished in late Summer 2015 – with Sandtex Trade 365 being applied throughout winter, spring and summer.

The product is specially formulated for use in adverse weather conditions and features high performance Pliolite® Resin to combat difficult weather conditions.

It can be applied at temperatures as low as -10°C, and is also rain-resistant in 20 minutes, so can be used when there is a threat of showers. These qualities enable decorators to extend the traditional exterior painting season in the UK and take advantage of more opportunities to paint outdoors.

The works at Kirkbarrow Estate have included wall tie replacement, patch render repairs and full render paintwork and are part of a £38 million, five year investment programme across the association's housing stock. Crown Paints has been selected as a supplier, with a number of contractors working on the various sites.

Lisa Maguire, Customer Experience Manager at South Lakes Housing Association said: "We chose Sandtex Trade 365 because we can use it all year round and in 20 minutes it's water resistant."

"Because of our climate that's really important to us."

As well as exceptional performance in poorer weather conditions, Sandtex Trade 365 also offers 15 years' proven durability, with exceptional adhesion providing a long-lasting finish which has been independently certified by the British Board of Agrément.

Lisa added: "As well as the application benefits, a major bonus for us is that it has made the properties look good."

"We've had different contractors using it and it's been a really good product to apply. It covers render patching very well."

Nigel Jones, Quantity Surveyor at Keepmoat Regeneration has been involved in the works at Kirkbarrow Estate. He said: "We've done the majority of the work from November 2014 onwards through the worst time of the year."

"Sandtex Trade 365 can be applied in poor weather conditions and we've managed to progress through the estate although the weather has been bad."

"If you look at the quality of the paint work on the external elevations where patch render has taken place the paint gives the impression that full render repair has been undertaken."

"We're really happy with the end result and the technical back up we've had from Crown Paints has been excellent."

A video has been produced about the Kirkbarrow Estate project, which can be viewed by scanning the QR code.
