CASE STUDY

Our customer had originally enquired about a GRP Water Tank to use as a break tank in a new Biomass Project in Yorkshire. They were intending to put the tank inside a container along with the necessary pumps they needed.

A sparge pipe is included to ensure complete water circulation.

6x2x2mtr Combined Housing Tank

We introduced the combined housing tank to our customer and they soon realised that we could save them money by incorporating the plant housing in the tank so that they no longer needed the container.

With internal measurements of 6x2x2m this plant tank gives a nominal capacity of 20,000Ltr and includes a 5x2x2m tank & 1x2x2mtr housing with double doors.

It is fully insulated and complies with the current water regulations to CAT 5 with (AB) Airgaps.

Available in our full range of tank sizes up to 13x3x2.5m – 97,500Ltr
