A ceiling system that delivers
BOTH ACOUSTICALLY AND AESTHETICALLY

Now you can design a ceiling system that not only looks good but also delivers incredible acoustic performance – Introducing HeartFelt® Origami

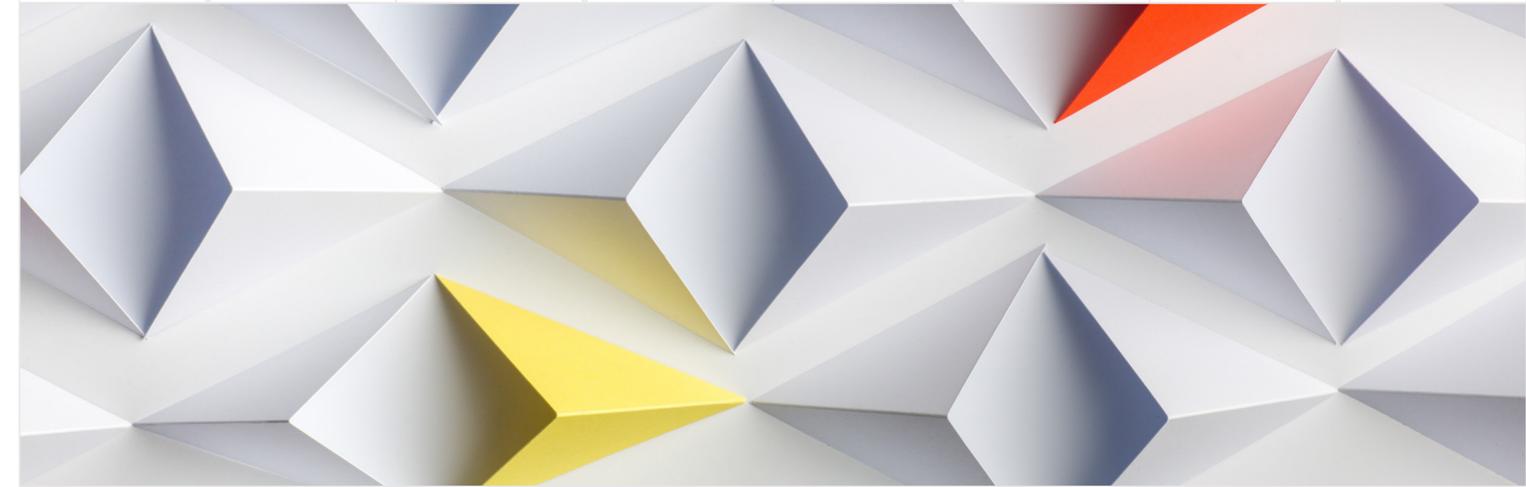

The origin

HeartFelt® Origami is based on the principle of a stiffening technique that requires less material and a felt product that has special acoustic properties.

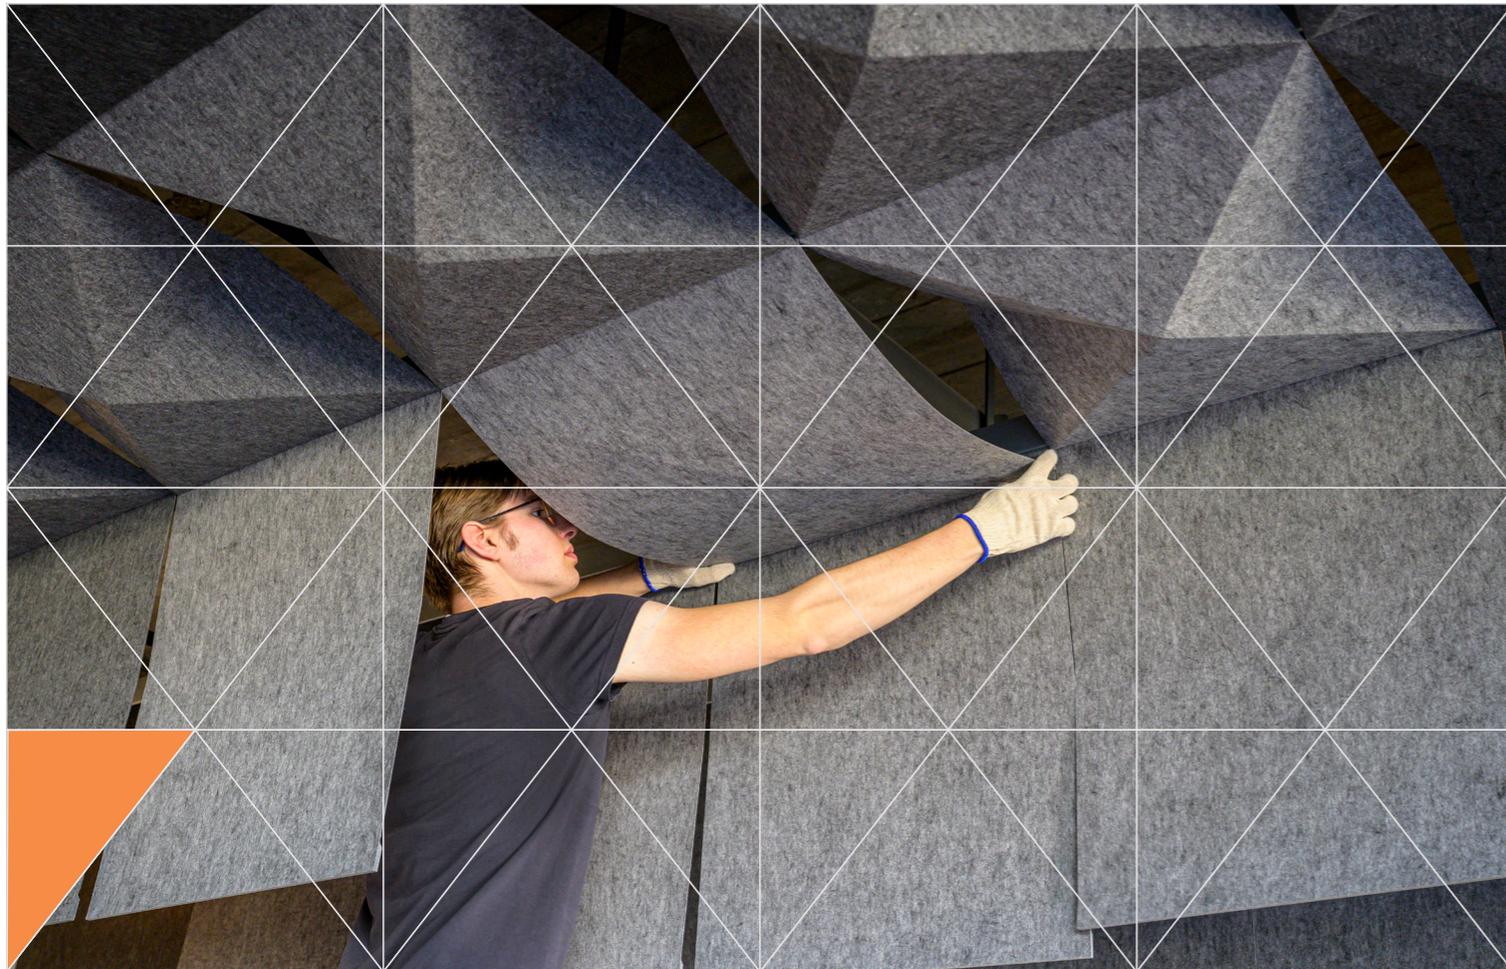

Ancient tradition

CONTEMPORARY APPLICATION

Origami is the Japanese art of folding paper; the aim is to transform a flat square piece of paper into a finished sculpture through folding and bending. The principles of Origami can be found in countless technical designs, such as airbags in cars, the design of unfolding a minuscule robot in the human body and in architectural designs such as The Tel Aviv Museum of art and the Park Pavilion in Cuenca Spain.

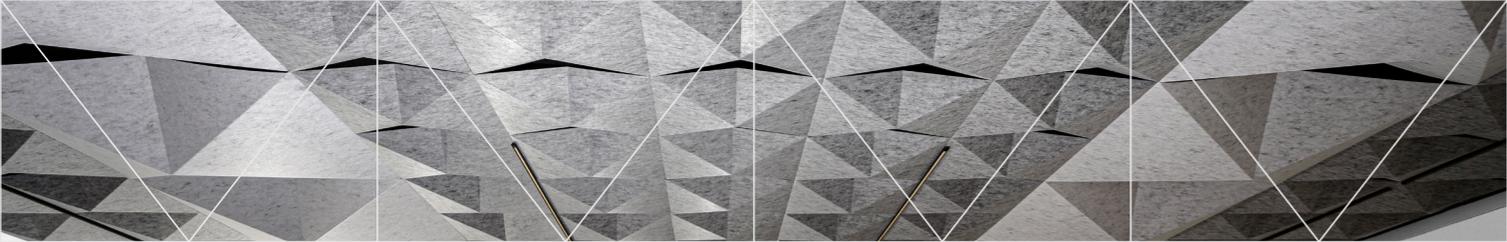

Sustainable & circular

The origami folding technique offers us a very practical way of adding rigidity to materials without the need to add other materials. Few other technical products are required during installation.

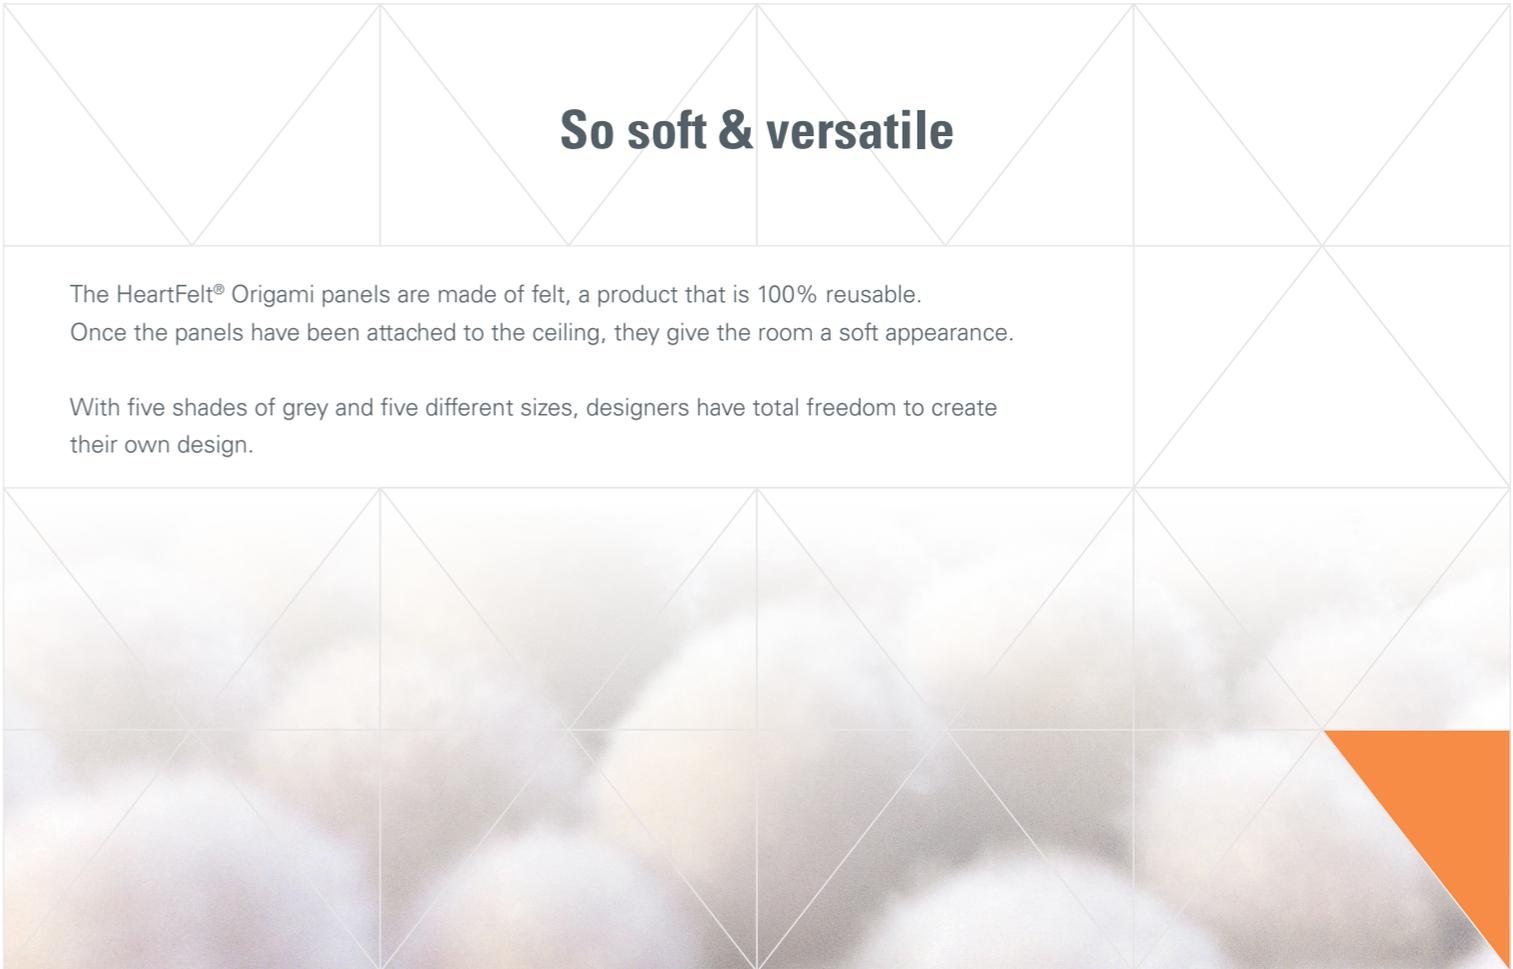

The materials that are needed can easily be (dis)assembled and reused. That way, HeartFelt® Origami plays a key part in our desire for and pursuit of circular and sustainable construction.

Serene silence

A ceiling with a folded structure according to the art of origami results in superior acoustic properties. A playful plane of triangles ensures a high degree of sound absorption. The room is filled with a serene silence!

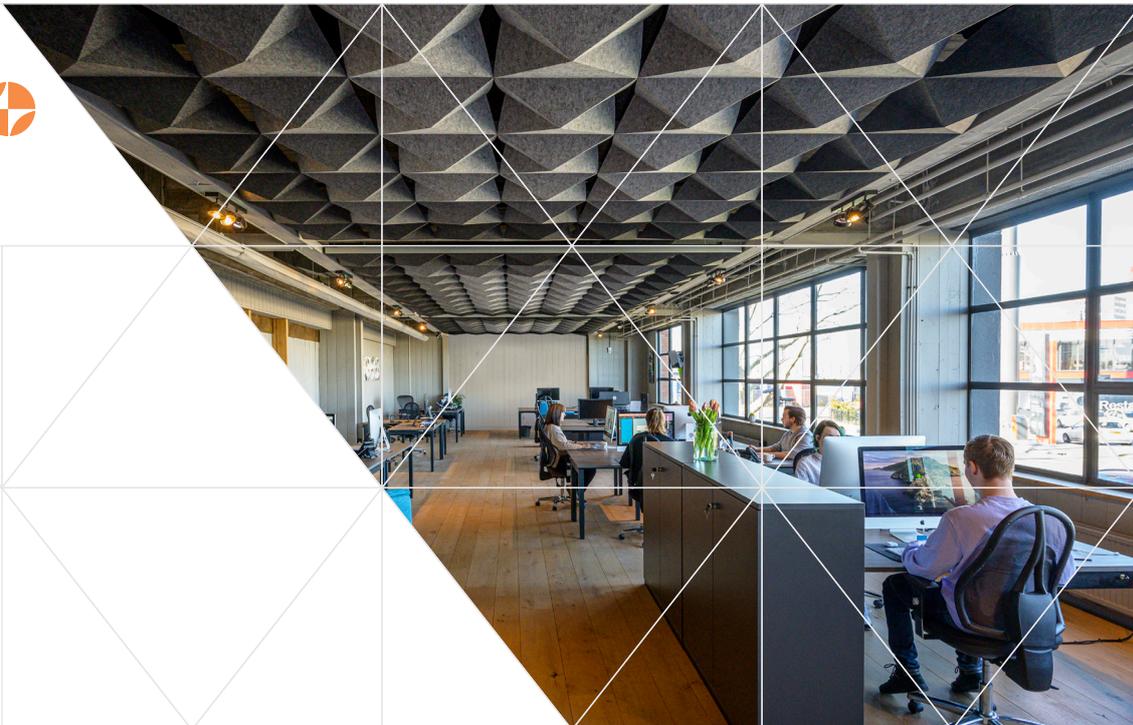

So soft & versatile

The HeartFelt® Origami panels are made of felt, a product that is 100% reusable. Once the panels have been attached to the ceiling, they give the room a soft appearance.

With five shades of grey and five different sizes, designers have total freedom to create their own design.
