

CREATIVERADS

SHAPING THE FUTURE OF ITALIAN DESIGN

THE NEW FORMS OF MARBLE THAT'S KINDER TO THE ENVIRONMENT

“Our mission is to enhance our customer’s well-being by providing ‘healthy heat’ for the environment of their homes. The comfort and quality of their lives are the goal of our passion”

To this end, CreativeRads combine recycled materials, with new, technologically advanced production processes,

enabling infinite architectural design possibilities, whilst always respecting indissoluble, environmental values.

It is now obvious, that only a sustainable philosophy, and responsible conduct, will allow us to preserve resources for future generations

This is what we believe at CreativeRads, and by combining the creativity, innovation and commitment which has always distinguished ‘Made in Italy’ products, this is what we achieve

 made in Italy

Electric Heating becomes beautifully intelligent with maximum comfort and minimum energy

FIVE REASONS TO CHOOSE
*CREATIVE*RADS

CREATIVERADS
SHAPING THE FUTURE OF ITALIAN DESIGN

1

Sustainable and Patented Technology

CreativeRads marble powder radiators are the product of exclusive production processes and dedicated patented systems

The marble powders, a natural waste of the cutting process, are agglomerated using only cold water and special thickeners.

They are hand cast in moulds and left to rest for at least four days in order to separate the moisture from the marble agglomerate

The protective coating is then applied with water-based, environmentally friendly, 100% recyclable products.

At the end of their life cycle, after separating the marble from the elements, the CreativeRads panels are crushed to powder by mechanical compression and 100% recycled, to be re-used in other applications

This creates material capable of regenerating themselves and because the process of manufacture is performed at low temperature, the amount of energy used is minimal

2

Energy Saving

CreativeRads have designed their radiators to be used with renewable energy

By converting the Sun's radiation into usable electricity, a PV system allows the CreativeRads panels to produce energy at zero cost.

In addition to being able to use self-produced energy, they are also equipped with an intelligent thermostat, that can be programmed weekly and daily.

Thinking of future generations, CreativeRads sustainability, guarantees 'zero kilometres products', to further reduce the already minuscule carbon footprint. All materials and components used to manufacture our products are sourced from Italian companies and are 100% Made in Italy.

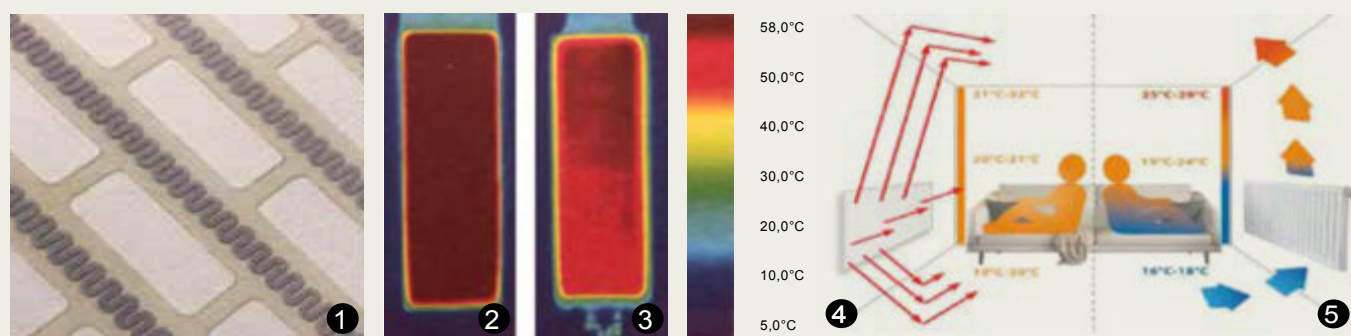

3

Health and Well-being

CreativeRads exploit radiant heat technology. Heating by radiant energy is observed every day, the warmth of the sunshine being the most commonly observed example,

Using the principles of radiant heat to transfer energy from an emitting heat source to an object, heat is distributed evenly and uniformly

- 1) Electrical element with techno-polymers
- 2) Electrical element thermal image
- 3) Water based element thermal image
- 4) Radiant heat
- 5) Convection heat

How does it work?

Like the Sun on a warm stone, on a hot summer's day, the bespoke, internal, integrated elements, transfer their energy through the radiator. The agglomerated marble quickly absorbs this, then gently releases the resulting conserved heat into the room. Temperature sensors within the stone control the correct heat distribution, to ensure maximum comfort, with minimum energy use.

Up to 25% more efficient than traditional heating systems

CreativeRads radiators are also a powerful ally against allergies. Traditional radiators transfer heat by convection which heat the air causing it to increase in volume and rise. This process facilitates movement of dust, promoting the onset of allergies in sensitive people.

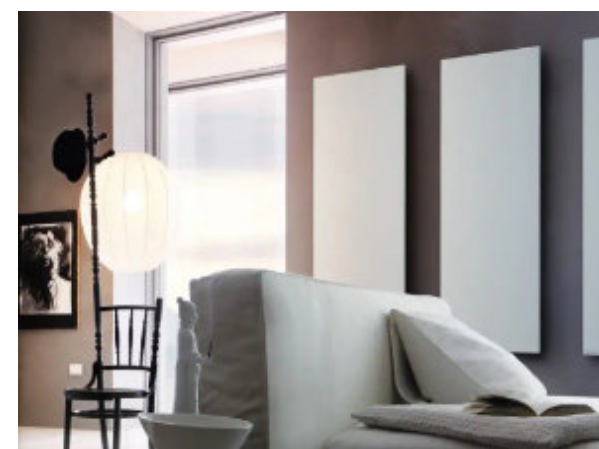

By transferring heat radiantly, CreativeRads radiators do not move any dust, keeping the air clean. They create comfortable temperatures at the source and by eliminating duct losses, is more energy efficient than traditional heating systems.

4

Aesthetics & Functionality

An added value of CreativeRads is the perfect combination of cutting-edge technology and craft details, where the skilled hands of our craftsmen mould the shapes with attentive passion

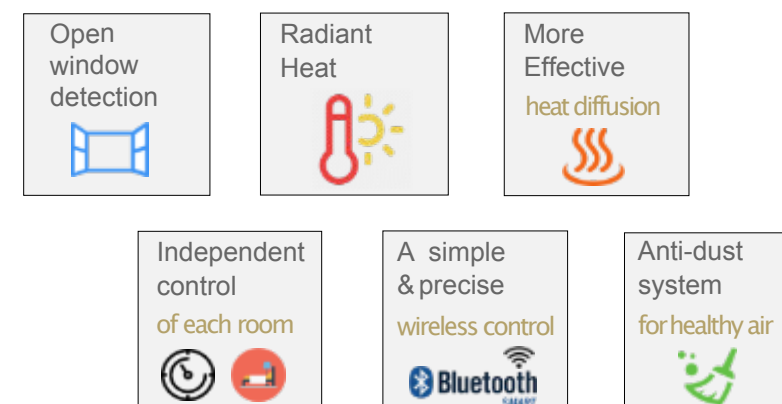

Style and Comfort in perfect harmony...

Full control at your fingertips

CreativeRads ranges are created with tranquil and linear designs giving your walls a hint of modernism with discretion. They can be used as a decorative display if placed in a visible position, or absorbed into the environment due to their discrete presence

CreativeRads can be controlled with our innovative, magnetic wireless control; placed by the radiator, the thermostat regulates and adjusts the amount of heat necessary for each room, automatically reducing the energy consumption in unoccupied rooms by activating the "Night Mode"

5

Simplicity of Application and Installation

CreativeRads products can be used in any type of environment and due to their high degree humidity resistance (IPX4 protection) they can also be used in bathrooms

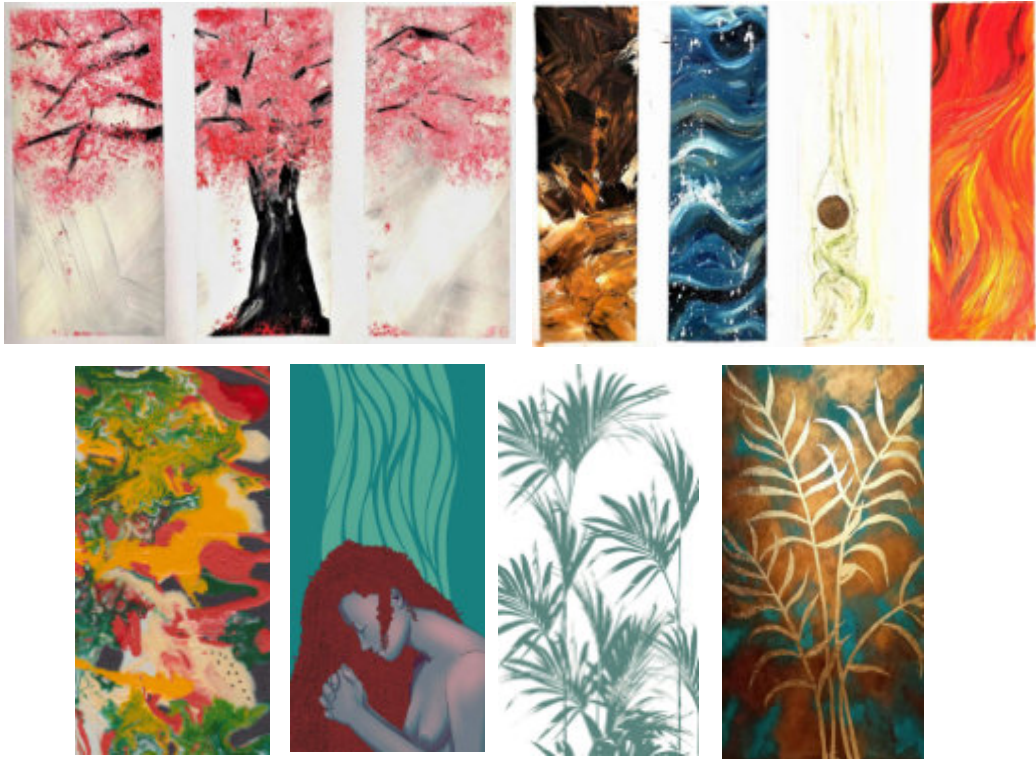

Customisable...

In the kitchen, living room, bedroom, bathroom, basement and even the cellar CreativeRads are an indispensable presence.

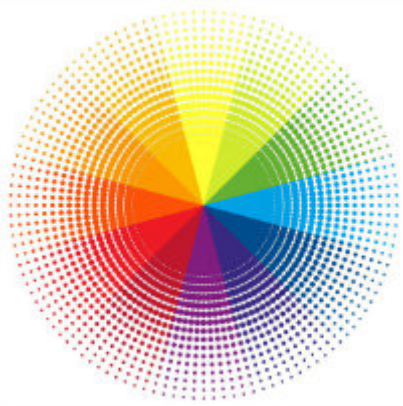

Reconciling aesthetics and purity, shape and volume, visibility and discretion CreativeRads can be personalised in a variety of colours and finishes. An image of your choice can be printed on the radiator's surface making it possible to transform the radiator into a picture, print or painting, a distinctive feature which combines the heating function with personal design.

Customising your radiator can complement your furnishings, or even blend with your wallpaper. Attention to the environment and sustainability are the principles on which CreativeRads entire philosophy is based. This is also reflected in the materials used to customise the panels. The colours are water based, fixed with bio compatible UV rays and free of fumes.

PROSPECTIVE TO YOUR INTERIOR *

Choosing the right wattage

How to calculate the correct heating requirement

The first step to determine the correct wattage necessary for a room is to determine its energy requirement according to the level of insulation. There are a number of variables that effect the energy required to heat a room or property. These must be taken into consideration in any calculation.

These include:

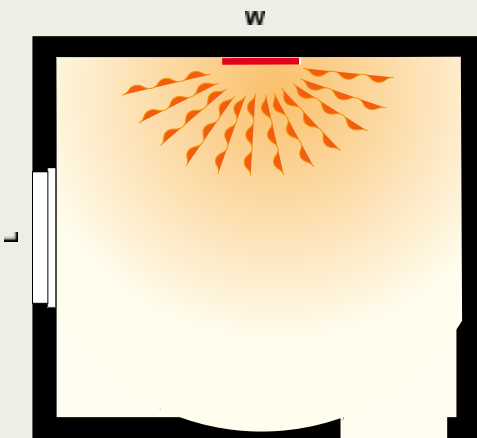

Temperate location - A property in southern England will require substantially less energy than a similar property in northern Scotland.

Insulation - The standard of insulation plays a major role in energy calculations.

Glazing - Double or triple glazing will signif icantly reduce energy requirements.

Because CreativeRads work by radiant heat, the energy requirement is calculated in relation to the surface area to be heated and not the volume of the room.

$S = L \times P \times W / m^2 = \text{Necessary wattage}$

Example:

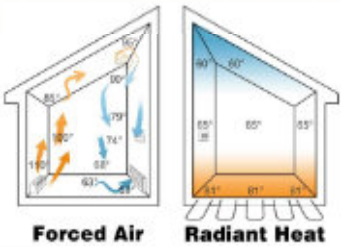

Room 4mt x 4mt = 16 M²
Medium insulation 60w/M²
Wattage required =960W

New build high insulation 30-60 W/M²
Medium insulation 60-100 W/M²
Low/no insulation 100-150 W/M²

$L \times P \times W / M^2 = \text{Wattage required}$

Radiant energy is the oldest form of heating used to provide heating comfort. Radiant heat uses invisible electromagnetic infrared waves to heat you. It doesn't heat the air. It delivers the heat to the ground level versus heating the surrounding area. The objects that are in the direct pathway absorb the energy immediately. Once they heat up, they radiate heat to other objects in the room. It's a fascinating way to transfer heat very efficiently. CreativeRads takes advantage of this principle, heating like the sun. This all translates into better comfort, and more efficient heating

- 1 Instant uniform heat
- 2 Higher efficiency than convention heating
- 3 Better indoor air quality reducing allergies
- 4 Comfort at lower air temperatures with no cold spots
- 5 Gentle room air circulation
- 6 Reduced heat loss
