

TORTRIM

Roof Trims and Accessories

Developed to complement the Tor Elastaseal® waterproofing systems and provide a professional finish

WHEN SHOULD TORTRIMS BE USED?

- In the construction of a warm roof system, to allow protection and a neat finishing of the system.
- To encourage water movement off the roof edges, or to stop water leaving the roof.
- With a cold, liquid roof installation to allow professional terminations.

PRODUCT RANGE

The range is made from High quality GRP resins and is supplied with the fascia pre-finished in black (external trims only). Tortrims are supplied complete with a reinforcing strap, which allows easy gluing of the trim lengths before fixing.

The range comprises of standard 90° drip trims, water check trims with drip details, a hard edge for insulation terminations, an internal angle for upstand detailing and a termination bar. It also accommodates the vertical trim depth requirements for the common Tortherm Insulation depths, to ensure a quality, professional finish is achieved.
