

### LAYFAST TECHNOLOGY

**Our underfloor heating systems benefit from our unique pipe lay pattern and ball routed channels helping you to lay our systems faster and easier than ever before.**

LayFast Technology makes the most of our patented and completely unique pipe channel pattern. This pattern not only allows for panels to be laid in a similar method to flooring panels, but enables almost infinite flexibility as to where the pipe can be laid. This means you can easily work around complex unheated areas, room shapes and better manage flows and returns.

Combined with our unique pipe channel pattern, LayFast Technology has led to the development of the ball routed pipe channel. This means that the pipe, when inserted into the channel doesn't pop out, especially when laying around return loops or when working into complex shapes such as avoiding unheated areas.

**Products such as our ClipPlate and Staple systems are also quick to install systems however they do not benefit from the features above but will feature the LayFast badge.**

Products available with LayFast Technology will show the badge below;

### PRODUCTS AVAILABLE WITH LAYFAST TECHNOLOGY

TORFLOOR SUSPENDED

TORFLOOR BATTEN

TORFLOOR RDB

FOILBOARD SUSPENDED

FOILBOARD BATTEN

FOILBOARD FLOATING

LOWBOARD

LOWBOARD RDB

STAPLES - This is a quick to install system due to the system configuration only.
