

## DRYSYSTEM TECHNOLOGY

We draw on years of experience to develop and manufacture systems that are easily installed into timber constructions such as suspended, batten or acoustic floors.

Our unique DrySystem technology means exactly that. All our systems for timber floors do not require any wet elements such as bonded screeds or fills, simply lay and complete, with no mess and no fuss. Our DrySystem Technology incorporates pre-bonded foil emitter layers to further enhance performance in dry and timber constructions.

Products available with DrySystem technology will show the badge below;
