PARTITIONS  
**SYSTEM 68**

QIC double glazed System 68 divides spaces by designing and manufacturing internal glazed partitions with integrated door sets.

We are high quality UK manufacturers, proud of our long standing relationships built on service, flexibility and technical support. Our knowledgeable and experienced specialists deliver the architect's vision through our extensive installer network.

The QIC System 68 brand of internal glass partitioning and transition profiles offer sleek minimal head and base track solutions.

Our Double-Glazed partition system offers a practical and innovative solution for the discreet division of office space - providing high acoustic performance and visual privacy while allowing natural light through. Our partitions add a contemporary feel that increases visibility across work-spaces.

Available in either straight lines or faceted, QIC System 68 Double Glazed is designed with the minimum of components, thus facilitating speed of installation without compromising quality. The various glass joint options ensure a virtually frameless system with the addition of vertical mullion post if required between modules. Our framed door sets can take timber, glass, framed single and double glazed doors to provide a wide range of design options within the system.

- Hidden Minimal Gaskets
- Standard Glass Thickness 10mm - 12.8mm
- Acoustically Tested
- Stock Ironmongery Options
- Track & Frame Cleat Seamless Joints
- Single to Double Synergy
- Minimal Aluminium Faces
- Blind Options
- Mullion Post for integral blinds
- Manifestation
- Double Glazed
- Standard or Bespoke Frames
- Banding Effects
- Glass Doors
- Standard Lengths
- Stock Options
- Bespoke Colour Options
- Express Delivery

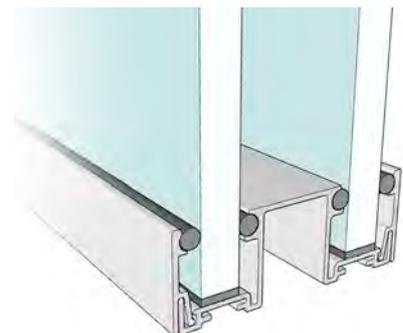

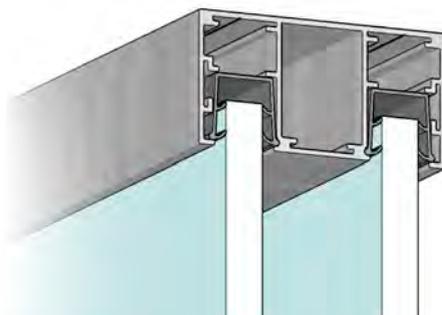

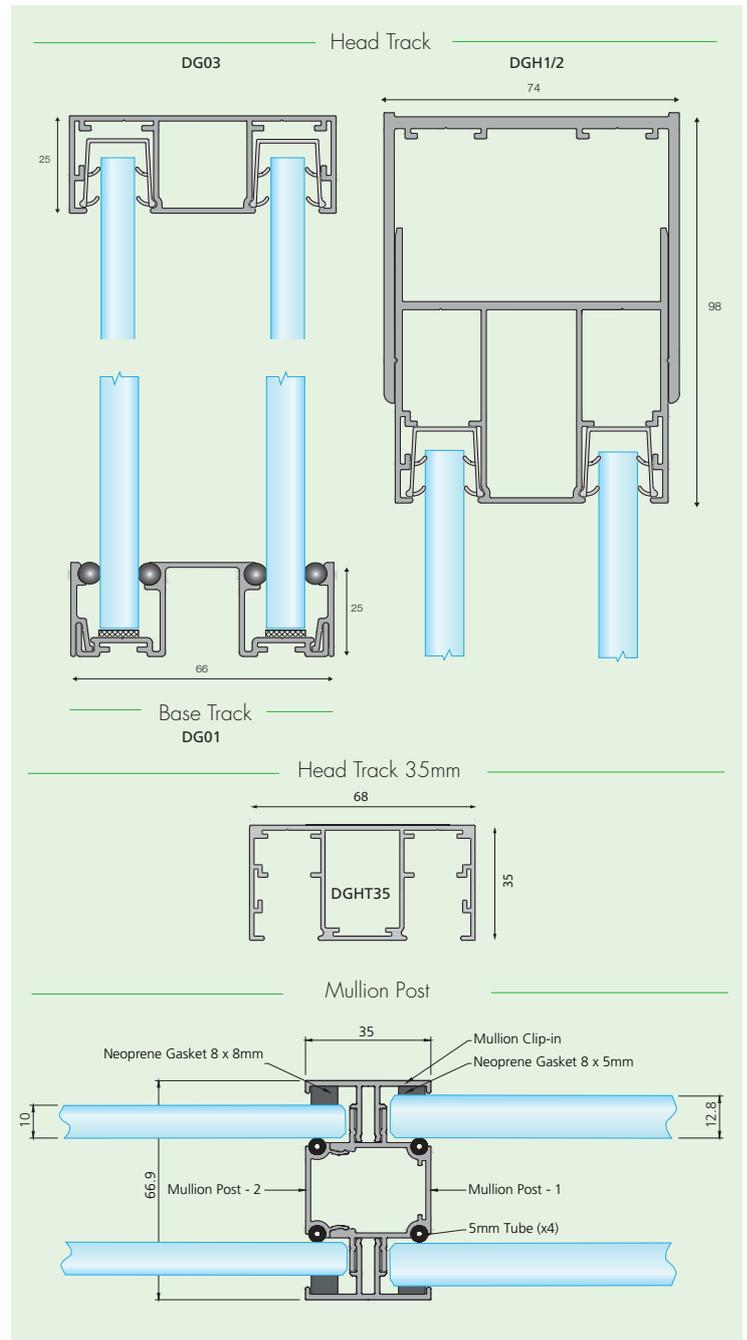

**System 68 Double Glazed** is a double glazed minimalist frameless glass partition system, creating an impression of space and natural light.

Our double glazing is a stunning dry jointed system which achieves outstanding acoustic ratings, comparable to blockwork partitions. It has its own range of specially designed high acoustic doors. This system easily converts from double to single glazing or vice versa, allowing you to maintain the same visual appearance across a work space, whilst addressing varying acoustic requirements.

With a range of double glazing configurations within a single slimline system. Different thicknesses of glass can be accommodated to deliver a solution that meets your acoustic specification and your budget. It has the added flexibility of being able to incorporate integral blinds for privacy due to an aluminium mullion that sits within the glazing cavity.

The excellent acoustic performance, aesthetic appeal and adaptability of System 68 Glazed makes it one of our most popular systems. It integrates seamlessly with generic drywall with the use of our aluminium tapeable glazing channel, making it an ideal solution for glazed fins or clerestory glazing, where acoustic performance and design aesthetics cannot be compromised.

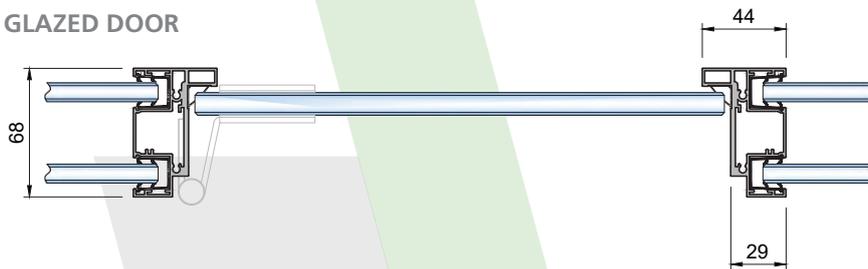

System 68 2 part deflection head has been designed to achieve the same high-performance standards as the rest of the QIC range whilst incorporating a deflection tolerance on site.

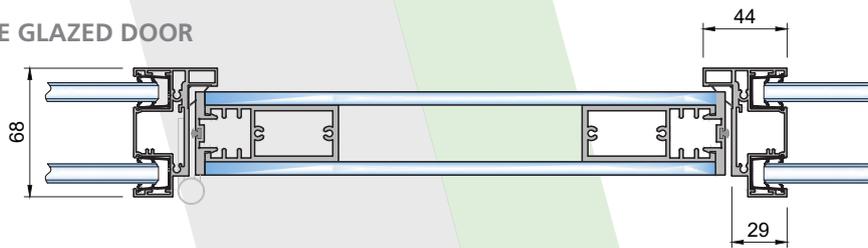

The glass/dry joint and discreet mullions, or 'ghost posts', and framework of System 68 Double Glazed combine contemporary aesthetics, elegance and durability. It is a well-established solution that creates a stunning look in any working environment. The Door Frame can be manufactured to suit Glass, Timber, Framed Glass and our Acoustic Double-Glazed door.

**System 68 Double Glazed Drywall Integration** - QIC System 68 is the only solution for a truly integrated frameless glazed and drywall junction.

QIC partitions double glazed drywall integration can be uniquely designed to the user's specification requirements. System 68 Double Glazed can integrate between glass and drywall at any point in a partitioning floor plan, to offer choice between glazed and solid partitioning. The use of multiple junctions provides innovative design layouts. Junctions between the glass and drywall are recessed to provide a clean and seamless joint and are manufactured with a range of in-line integration profiles available.

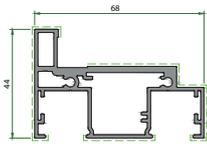

**System 68 Drywall Transition** - Our Drywall System offers the option of high levels of sound reduction.

QIC 68mm wide system is available with a range of glass configurations. Our slimline double glazed system provides flexible design solutions for the recent architectural trend of narrow-gauge glazed partitioning, without compromising on strength and performance. The frameless glazing and minimal trackwork creates a stunning environment for any interior.
