Excellent Construction Products

Naylor Specialist Plastics Secondary Operations & Special Projects

Standard & Bespoke Solutions for any requirement using our Specialist Secondary Operation & Special Projects Department

Shaping, Threading, Drilling, Routing & Punching Operations

Our secondary operations department can carry out many different functions to enable us to supply a finished product, without the requirement to double handle your product prior to delivery. We can fit bearings in rollers, fit caps and plugs as well as drilling, routing, punching, shaping and threading.

Bespoke Product

Plastic High Visibility Bollards with Caps, are available in any colour, size and diameter. Bespoke tube sizes can be offered to create a ground sleeve with drip tube if required to suit your bollard.

Markings/Print

Tube markings can be hot foil for standard lettering or ink jet printed for individual specialist markings. We have used UV ink to invisibly print product details which are only visible under UV light. We are happy to own brand your product with the exact details you require.

Antimicrobial Plastic

An antimicrobial active ingredient can be added to the raw material that will reduce microbes on the surface of the product making it more suitable for certain environments. An added benefit is that moulds and mildew can be reduced. The active components used in the additive are notified on the biocidal products directive and have EFSA and FDA approval for use in food contact applications

Wide Selection of Tooling and Gauges

Go / No Go gauges can be made in house to ensure customer tolerances are met.

Calibrators and tooling can be manufactured in house enabling a quick turn around for new products, tooling adjustments can be made and trials resumed very quickly. We hold a vast range of tooling and the chances are, we have the tool for the size and shape of tube/profile required.

Special Projects Bridge Deck Weep Pipe

Every project needs problem solving ideas to enable turnkey solutions to be found. With our vast experience we can find a solution for most of our customers requests. This request consisted of a 1.5m length of 50/60mm tube with holes drilled at 50mm centres over 450mm of its length and an abraded surface for keying into a concrete deck along the remainder of the tube. The system ended in a 45 deg angle.

Working with other materials

Tubes can be manufactured to suit dimensions of other material such as steel and aluminium tubes as well as glass fibre and other plastics

Shapes & Profiles

Tubes of many shapes and profiles can be manufactured from a wide variety of materials & colours with secondary operations as required

Precision Extrusion
