EUROBRICK
BRICK SLIP SYSTEMS

The modern face of construction

The original real brick cladding

Eurobrick was the first company to introduce a comprehensively designed brick and stone slip cladding system to the UK in 1990 and remain market leaders for this specialist product.

We have a long established track record of supplying high quality systems to all sectors of the construction industry. Our cladding provides a fast, effective way to get the look, feel and durability of traditional masonry. The systems are all simple, versatile and low maintenance. A wall finished with Eurobrick is indistinguishable from a traditionally constructed wall and will weather and age in the same way.

Eurobrick cladding is suitable for a wide range of applications including renovation, solid wall insulation, new build, modular, high rise and interiors. Our experienced team can provide advice on which system is best suited to a specific project.

Our products

We have cladding systems for exterior and interior applications, which can be fitted to most substrate types, with or without insulation. Please contact us to discuss which option is most suitable for your project.

A-CLAD

All components of this brick faced wall system have been fully tested to achieve an A1, non-combustible fire rating. This specially developed rainscreen system uses a 12mm thick fibre cement panel and is suitable for application to buildings of any height.

P-CLAD

An external brick faced wall cladding system designed with new build projects in mind, providing a rainscreen system for structures requiring a cavity behind the cladding. P-Clad has a cement particle backer panel, forming a rigid sheathing for the building.

X-CLAD

A brick faced external wall insulation (EWI) system suitable for new build, modular and retrofit projects. The extruded polystyrene composite backer panel is available in a range of thicknesses from 17-100mm. X-Clad is lightweight, easy to handle, environmentally sustainable and is a highly effective insulator.

V-CLAD

A budget brick faced external wall system suitable for both new build and retrofit projects. V-Clad is a cut expanded polystyrene (EPS) insulation panel and can be supplied in 20-100mm thicknesses. It may also be used for interior projects for fixing direct to existing surfaces.

I-CLAD

A brick faced internal wall system developed specifically for interior application. Can be fixed directly to steel or timber framed studs and wall linings. With a slim profile starting from 28mm thick (including the installed panel and brick slips) I-Clad can reduce the loss of valuable interior space.

Brick finishes

**We have a wide range of brick slips available in stock.
For full details and colour options please see our Product Guide
or visit our website www.eurobrick.co.uk**

Britannia range

A wide ranging collection of kiln fired, extruded natural clay brick slips and corners in a choice of colours and textures, manufactured in standard UK sizes. Special angles can also be manufactured to order.

Classic range

A range of manufactured and specially cut slips, offering traditional warmth and character. Cut or manufactured to standard UK size with corners available. Special angles can be manufactured to order.

Europoint pointing mortar

Specially formulated for our cladding systems, Europoint is an A1 fire-rated mortar that is easy to use.

It is a dry pack mortar that is available in 8 colours to complement your choice of brick or stone facings.

Cut to order

If a project requires a particular type of brick or stone, Eurobrick can source these and have them cut to fit within the systems.

Stone finishes

Bespoke quarried and reconstructed stone slips are available in various sizes, colours and dressings.

Please note that stone slips are specially cut or manufactured to order so lead times vary. For more information about availability of stone products please contact us.

Bespoke products

We also source and supply pre-formed products such as arches and soffits to add architectural details to your projects, as well as engraved bricks and brick slips for flooring too. Please contact us for more details.

How it works

All our systems follow the same premise; a backer panel with Eurobrick's horizontal ribbed profile to align and support the brick slips forming courses accurately and easily.

1. The backer panel is mechanically fixed to the substrate. Panels and fixings vary according to the system and application.

2. The brick slips are attached with an adhesive, which may vary according to the system. The horizontal ribs align and support the brick slips.

3. Brick slips are pushed into place leaving 8-12mm perpendicular gaps between bricks.

4. Specially formulated Europoint mortar is then piped or gunned into the brick joints.

5. The mortar is tooled in the manner of traditional pointing.

6. Once the mortar has set but not dried the brickwork is brushed to finish.

Please note

Eurobrick's systems include panel, fixings, adhesive, and may be supplied with or without brick slips and pointing mortar.

Ancillary products include corner bricks, base trim and installation tools. All items can be purchased separatly.

> "Versatile products that are quick and easy to install."

Installation and training

The installation methodology of our systems is straightforward. Installation may be carried out by one of our Approved Installers or by your own contractor.

We hold training courses for our systems or can provide on site training by special arrangement. Our training courses are suitable for anyone undertaking a Eurobrick installation including DIY projects.

If you would like more information on the fitting process, please visit our website to view installation videos and download our Installation Instructions.

If you are interested in our training courses please contact us:

Visit our showroom

You can see all of our cladding systems and finishes at our showroom which is open to visitors Monday-Friday (excluding bank holidays) 9am-4.30pm. An appointment is not necessary but if you would prefer to make one you can do so by calling us on 0117 971 7117.

Please note

Our brick slips are kiln fired natural clay products and while every effort is made to ensure consistency, variations in size, colour shade and texture can occur.

This should not be viewed as a fault in production and should be taken into account at the design stage of the project.

Mortar colour variations can be expected due to the porosity of the brick, finishing techniques, mixing procedures and weather conditions (temperature, humidity and wind) at time of application.
