

NEW side-fix rafter bracket

Lindab RainwaterSystem

Lindab Rainline™

Lindab is launching a new bracket, KRT. This bracket is a side-fix rafter bracket which can be used on buildings with no fascia or where the top of the rafter is not easily accessible.

Side-fixing makes it easy to adjust the fall of the gutter by installing the brackets at different heights on the rafters. The length of the bracket enables fitting to buildings even with short rafters. The bracket is bent to 38 degrees and is available in both 125 mm and 150 mm sizes.
