H: 1300, 1500 or 1700
W: 900 or 1200
Bespoke sizes available

RESISTANCE
BS EN 356 P4A

CONSTRUCTION
Steel, glass, polycarbonate and anti physical attack materials

COUNTERSHIELD

CounterShield is an anti-physical attack sash style security window, designed to facilitate open counter trading and staff protection. The ability to set the electrically driven moving screen at any position between fully open and fully closed allows staff protection to be varied in the face of changing risk or for a position to be temporarily closed as required. Typical applications include A&E and hospital reception desks, local authorities, police and schools.

MAIN FEATURES

- Fits to existing counterwork
- Ability to electronically drive the screen to any position from fully open to fully closed
- Can be quickly closed by a panic button on the staff side
- Safety beam across leading edge of the screen to prevent being trapped by the moving screen
- Requires 240Vac 5A power
- Nationwide installation and service contracts available

OPTIONAL

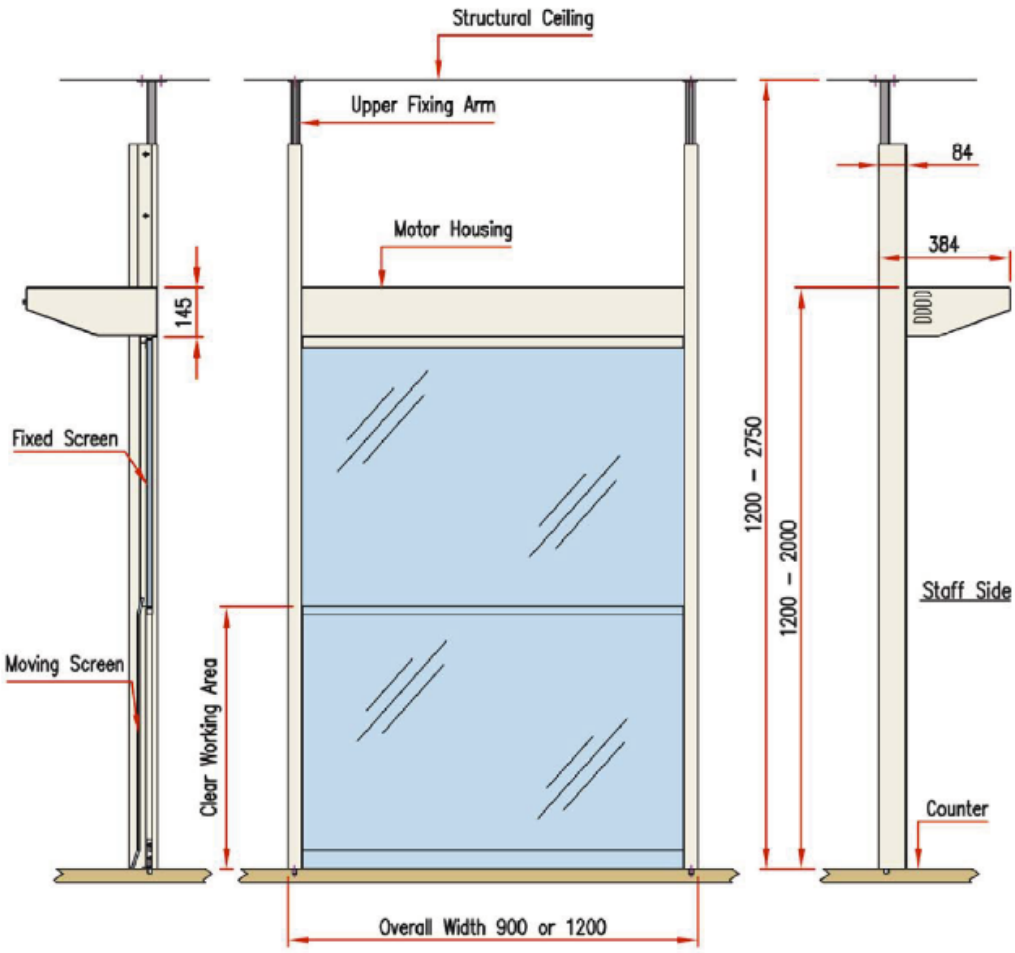

- Where multiple Countershields are installed, the system can be supplied so that pressing any of the reactive closure buttons will close all of the screens
- Framework finish can be Polyester Powder Coated to match surrounding environment
- Standard and bespoke sizes are available
