

KEIM DESIGN-LASUR

THE MINERAL STAIN WITH A METALLIC EFFECT
THAT ENHANCES ARCHITECTURE

KEIM DESIGN-LASUR

ENJOYING COLOURS, INFINITE CREATION POSSIBILITIES

To design exterior architecture or to decorate interior spaces, the Design-Lasur range and its palette of metallic effect shades allow you to give free rein to your creativity. Developed from a double sol-silicate binder and exceptional quality pigments, Design-Lasur ensures the durability and aesthetics of the works. Its shades are highly durable, bright and UV resistant. Design-Lasur can be applied to all types of mineral substrates (concrete, lime, brick, stone etc.) and offers great flexibility. Thanks to its complete range, you can play with the transparency of the shade until you obtain the desired effect.

THE AVANTAGES :

- High water vapour diffusion capacity
- Incombustible (A2-s1, d0)
- Certification Cradle to Cradle
- High resistance to weathering and pollution
- Ease of implementation and maintenance
- Preserves the authenticity of the mineral substrate
- Endless design possibilities

DISCOVER THE DESIGN-LASUR RANGE

KEIM Design-Lasur is a metallic effect mineral stain based on sol-silicate. It can be used indoors and outdoors to design creative stains on all types of mineral surfaces. Diluted with KEIM Design-Base and/or KEIM Design-Fixativ, KEIM Design-Lasur allows you to play on the effects of transparency and opacity without distorting the authenticity of the substrate.

KEIM Design-Base is a consistent, non-pigmented sol-silicate thinner. Combined with KEIM Design-Lasur, it allows you to produce matte and transparent mineral colourwash with increased density.

KEIM Design-Fixativ is a sol-silicate based thinner and primer. On very absorbent substrates, it makes it possible to homogenise and reduce the absorption of the surface. Used as a thinner, KEIM Design-Fixativ allows you to obtain very transparent and luminous stains with a very low layer thickness, thus respecting the natural appearance of the substrate.

THE ONLY LIMIT IS...

The KEIM METALLIC colour chart consists of 40 mineral shades, exclusively manufactured by KEIM, based on very high quality mineral pigments. Depending on the light, the metallic effect shades give the surface very intense iridescent reflections. Modern and fascinating, the KEIM METALLIC palette offers you the possibility of designing unparalleled architecture.
