

Tanalith™

Specification Clause

To specify Tanalith™ pressure treated timber the following wording is recommended . . .

The timber as detailed.....(*insert species, quantity, dimensions whether sawn or round and its end use/description of component*).....is to be vacuum/pressure treated with TANALITH preservative (*state with TANATONE colour additive, if desired*) to comply with the Treatment Code.....(*insert relevant Treatment Code from the current TANALITH Specifier's Guide leaflet*) and Use Class.....(*insert relevant Use Class from EN 335*).

Following treatment, any areas of treated timber revealed by cross cuts, holes, notching or boring must be liberally brushed with a suitable end grain preservative in accordance with the manufacturer's instructions to maintain the integrity of the preservative protection.

Timber which is rip sawn, equalised, planed or heavily sanded must be returned to the treatment plant for re-treatment.

On no account are fence posts to be pointed after treatment. The shortening of posts and columns should be avoided. In any event, cross cutting must be restricted to the top of the post or column and cut ends of fence posts must not be placed in ground contact.

Treated Timber User Guide

A Tanalith™ Treated Timber User Guide with full information on all aspects of the use of Tanalith™ pressure treated timber is available from the Knowledge Centre of our web site - **www.trusttreatedtimber.com**
