

SOLAR BRIDGING LADDER

The Solar Ladder offers a safe, practical way of working when installing or maintaining solar panels. The bridging ladder provides 23cm clearance from the roof to the underside of the stile and up to 4.6m free span over the roof. The ladder is simply rolled up the roof on its soft rubber wheels and then flipped 90° into position on the roof. The ladder can also be easily traversed along the ridge with the use of special wheels fitted to the roof hooks.

Technical Specification

▶ Weight	29kg
▶ Length	5m (alternative lengths supplied to order)
▶ Width	320mm
