

**PRESS RELEASE****KAWNEER EXPANDS LOUVRE SYSTEMS RANGE WITH K-LOUVAIR**

Leading supplier of architectural aluminium products and services Kawneer UK is launching the [K-LouvAir](#) Ventilation System, delivering industry-leading air control alongside attractive aesthetics.

Ideal for residential buildings, offices, schools and care centres, the K-LouvAir integrates beautifully with Kawneer's window and curtain wall systems.

With each louvre extensively tested and optimised, the K-LouvAir delivers exceptional natural ventilation, with excellent airflow created by the low resistance of the high-performance blades, helping to deliver a comfortable and healthy indoor climate for occupants.

An extensive range of paint colours is available from Kawneer to enhance the aesthetics of the K-LouvAir and match other architectural systems in the Kawneer product range.

With a frame depth of 42mm, the K-LouvAir is available with three ventilation capacity options, all designed to offer a uniform appearance. Each option delivers a different degree of perforation on the louvre blades, therefore offering varying levels of resistance to insects, rodents and birds as required. Each K-LouvAir system is also vandal-proof.

Already at the global forefront of architectural aluminium glazing systems, Kawneer's K-LouvAir is the latest addition to the company's market-leading Louvre Systems range, which also includes [K-LouvreShield](#).

Kawneer's regional architectural advisers, as well as a central Architectural Services Team based at Kawneer UK's head office in Runcorn, Cheshire, are available to provide project advice and support.
