Technical Information

Overview of BLÜCHER® Technical Information 1-6

BLÜCHER® EUROPIPE

EuroPipe	9
EuroPipe Fittings	10 - 22
EuroPipe Accessories	23 - 27
Below Ground Fittings and Specials	28
EuroPipe Installation & Technical Data	29 - 38

BLÜCHER® ROOF DRAINAGE

Roof Drains	40 - 46
Roof Drain Accessories	47 - 50
Balcony Drains	51
Roof Drainage Installation & Technical Data	52 - 70

BLÜCHER® DOMESTIC & DESIGN DRAIN

Shower Drains Concrete & Tiled	74-80
Shower Drains Vinyl	81-83
Accessories, Gratings, Lower Parts, Traps and Baskets	84 - 98
Rodding Eyes	99-100
Multi Line Channels	103
Multi Line Lower Parts	104-107
Multi Line Accessories	108
Water Line Channels	112 - 115
Water Line Accessories	116-122

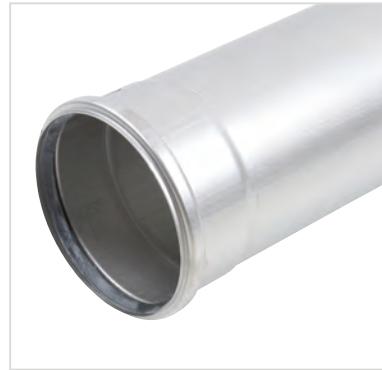

BLÜCHER® INDUSTRIAL DRAIN

Industrial Drains Concrete & Tiled	127 - 129
Industrial Drains Resin	130 - 131
Industrial HygienicPro	132
Industrial Drains Vinyl	133 - 134
Industrial Upper Parts	137 - 139
Industrial Lower Parts	140 - 143
Accessories, Gratings, Lower Parts, Traps and Baskets	144- 156
Industrial Rodding Eyes and Gastight Drains	157
Access Covers	158

BLÜCHER® CHANNEL

Channels	161 - 163
HygienicPro Channel	164 - 166
Kitchen Channel	167 - 168
Accessories, Gratings, Lower Parts, Traps and Baskets	169 - 186

Stainless steel

Long product life

Fire resistant

Lightweight

Hygienic

Long product life

- Corrosion resistant
- Resistant to impact damages
- Resistant to temperature variations

Fire resistant

- Non combustible
- No need for special fire insulation
- No toxic fumes are released in case of fire

Light-weight

- Low weight - high strength
- Weight only one third of cast iron
- Large pipes are easily handled by one man

Hygienic

- Low surface roughness
- High flow capacity
- Smooth surface prevents bacterial growth
- Smooth surface prevents blockages

Available in stainless steel AISI304/EN 1.4301 or
AISI316L/EN 1.4404

Material properties of stainless steel

What is stainless steel?

The designation stainless steel covers a wide range of alloys with different properties. One property common to all stainless steels is that they contain at least 12% chromium.

The stainless steels can be divided into three main groups and a few mixed types according to the structure of the steel:

- Austenitic stainless steel
- Ferritic stainless steel
- Martensitic stainless steel

Austenitic stainless steel is the most important, representing approx. 90% of total stainless steel consumption. Austenitic steel is also the only stainless steel suitable for drainage installations, and it is, of course, the type used by BLÜCHER.

Importance of alloying elements

Austenitic stainless steel contains at least 18% chromium and 8% nickel – thus the well-known designation »18/8« steel. Corrosion resistance generally increases with increasing content of chromium. In alloys with 12-13% chromium, the passive layer is strong enough to prevent the steel from corroding in normal or mildly aggressive media. The main effect of the alloying element nickel is on the structure of the steel and its mechanical properties. The steel's structure is austenitic with an adequate content of nickel. In contrast to the pure chromium steels (ferritic stainless steel), this results in significant changes in the mechanical properties, such as increased workability and ductility, better resistance to thermal stress and improved weldability. The austenitic structure also results in a change in the physical properties of the steel. For example, the steel is not magnetic and has higher thermal conductivity.

Material Specification

Material	AISI 316 L 1.4404	AISI 304 1.4301
Analysis		
Carbon (C %)	Max. 0,03	Max. 0,07
Chromium (Cr %)	16,5 - 18,5	17,0 - 19,0
Nickel (Ni %)	11,0 - 14,0	8,5 - 10,5
Molybdenum (Mo %)	2,0 - 2,5	-
Manganese (Mn %)	Max. 2,0	Max. 2,0
Silicium (Si %)	Max. 1,0	Max. 1,0
Sulphur (S %)	Max. 0,030	Max. 0,030

Physical Properties

Structure	Austenitic (nonmagnetic)	Austenitic (nonmagnetic)
Non-annealed		
State		
Specific gravity (g/cm³)	7,98	7,9
Melting point (°C)	Ca. 1400	Ca. 1400
Decarburization temperature in air (°C)	800 - 860	800 - 860
Expansion coefficient 20 - 100 °C (m/m · °C)	$16,5 \times 10^{-6}$	$16,5 \times 10^{-6}$
Specific resistance (20°C) (Ohm · mm²/m)	0,75	0,73
Heat conductivity (20°C) (W/°C-m)	15	15
Specific heat (J/g · k)	0,5	0,5

Mechanical Properties

Ultimate tensile strength (Rm) (N/mm²)	490 - 690	500 - 700
Yield point (Rp02) (N/mm²)	190	195
Modulus of elasticity (E) (20° C) (N/mm²)	$2,0 \times 10^5$	$2,0 \times 10^5$
Hardness Brinell (HB) (N/mm²)	120 - 180	130 - 180

CHEMICAL RESISTANCE TABLE

The table is based on laboratory experiments with chemically pure substances. The values should therefore be regarded as for guidance only.

	AISI 316 L Stainless	AISI 304 Stainless	EPDM	NBR	FPM
Acetone	A	A	D	D

VALUES TO BE REGARDED AS FOR GUIDANCE ONLY

PLEASE NOTE!

Concentration level, length of exposure, temperature and in particular the combination of several chemicals have a direct influence on the resistance of stainless steel to certain chemicals.

Each application should therefore be carefully reviewed to determine the suitability of stainless steel.

In particular, be careful with the use of hydrous cleaning agents containing compounds of chlorine.

Material properties of rubber seals

Rubber types

International designation	EPDM	NBR	FPM
Rubber type	Ethylene propene	Nitrile	Fluorine (Viton)
Nominal hardness IRHD	60 (+/-5)	60 (+/-5)	60(+/-5)
Colour	Black	Black/yellow dot	Purple (New: green)
Tensile strength MPa	≥ 10 N/mm ²	≥ 10 N/mm ²	≥ 8 N/mm ²
Elongation after fracture %	≥ 300%	≥ 300%	≥ 260%
Max. temperature range	-35/+100° C	-30/+80° C	-25/+200° C

Resistance

Wearability	B	B	B
Resistance to mineral oil	D	A	A
Resistance to vegetable oil	B	A	A
Resistance to benzene/petrol	D	A	A
Resistance to aromatic compounds and hydrocarbons	D	B	A
Resistance to ketones	A	D	D
Resistance to ordinary diluted acids and alkalines	A	A	A
Resistance to ozone and weather stresses	A	C	A
Resistance to air diffusion	D	C	A

A = Very good service - B = Moderate service - C = Limited or variable service - D = Unsatisfactory

A lip sealing ring constitutes the seal between socket and spigot end. The lip sealing ring ensures quick and efficient jointing of the pipe system while providing a tight seal in case of both pressure and vacuum. BLÜCHER® sealing rings are available in three different rubber qualities.

EPDM This sealing ring is black and made of ethylene propene rubber. This is BLÜCHER's standard sealing ring and it is suitable for all rainwater and waste water installations where there is no oil or no petrol residues in the waste water. The EPDM lip seal is a good all-round rubber quality suitable for a wide range of applications.

NBR This sealing ring is black with a yellow spot and made from nitrile rubber and is the sealing ring to be used where there are petrol or oil residues on the waste water (e.g. in connection with oil and petrol separators at service stations, garages etc.). The NBR lip seal should not be used where there is a risk of temperatures above 80°C. NBR is not resistant to solvents.

FPM This sealing ring is purple (New: green) and made from fluorine rubber (Viton®). This is BLÜCHER's sealing ring for special applications. The material is particularly heat-resistant and resistant to oil, solvents and strong acids. However, the FPM seal has only limited resistance to e.g. butyl acetate, acetone and methyl alcohol.

For advice regarding the suitability of the different rubber qualities, consult BLÜCHER.

Approvals

BLÜCHER has own testing facilities and cooperates with internationally recognized independent institutes. At BLÜCHER we also play an active part in setting international standards.

The functionality of our products has been documented by test reports and approvals from international institutes such as Sitac (SE), LGA (DE), BBA (UK), VTT (FI), ETA (DK) etc.

All pipes and channels are CE marked.

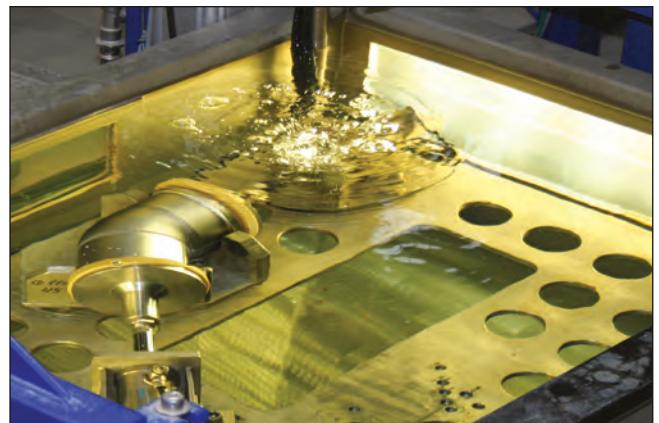

For a complete list of all current product approvals we refer to www.blucher.co.uk.

Furthermore, we use approved institutes for fire and sound testing, for instance DTI (DK) and Fraunhofer Institut (DE)

All production is carried out in Denmark in accordance with ISO 9001.

Production

Excellent workmanship, common sense and the most sophisticated production technology are combined to ensure the highest quality in our products.

All BLÜCHER® products are tested for leakages before leaving the factory

Maintenance

BLÜCHER stainless steel drainage products require only a minimum of maintenance.

The smooth, acid-pickled surface retains its uniform matt silver finish in most environments such as wet rooms, bathrooms and kitchens. However, in particularly demanding environments such as the food industry, laboratories, the chemical industry and agriculture, it may be necessary to clean the installation to avoid formation of coatings which can cause subsequent corrosion.

Cleaning can for instance be done by means of high pressure flushing. In some cases it may be necessary to use diluted citric acid. After use take care to rinse with plenty of water.

Please also notice that particularly aggressive and hazardous substances should be collected in containers and disposed of in another way and not through the drainage system.

The most modern piping machinery in Europe

Variants

- Range of sealing rings for various applications
- EPDM
- FPM (Viton)
- NBR

A WATTS Brand

The BLÜCHER® EuroPipe push-fit drainage pipework system provides an easy to use alternative type of drainage pipework and rainwater pipework for all applications, e.g. commercial buildings, food factories and laboratories.

In sizes 40 mm, 50 mm, 75 mm, 82 mm, 110 mm, 125 mm, 160 mm, 200 mm, 250 mm and 315 mm. BLÜCHER® EuroPipe is lightweight, versatile, aesthetically pleasing and economical. Combined labour and material savings can be considerable when compared with traditional pipe systems.

Specification

Stainless steel BLÜCHER® EUROPIPE push-fit pipework and fittings manufactured to BS EN 1124 Pt 1 & 2 and having BBA certificate 86/1751, 40, 50, 75, 82, 110, 125, 160, 200, 250 mm and 315 mm diameter as supplied by:

BLÜCHER UK Ltd
Station Road Industrial Estate
Tadcaster, North Yorkshire LS24 9SG
Telephone: 01937 838000

■ Application

The BLÜCHER® EuroPipe push-fit waste pipework system is suitable for the drainage of:

- a) soil and waste water
- b) rain water
- c) process waste water

Waste liquids of varying corrosive composition are discharged in chemical, pharmaceutical and food processing industries, also laboratories and catering establishments. Depending on their composition and temperature, these substances may cause unpredictable damage to traditional pipe materials. Pipes for discharging these substances must be manufactured from a material which is resistant to them. Stainless steel BLÜCHER® EuroPipe with EPDM sealing rings is suitable for most applications and can be used in both above ground and below ground situations.

■ Materials

Stainless steel is a clean, durable, corrosion resistant and long lasting material ideally suited for buildings with a design life expectancy of over fifty years. All stainless steels have inherent corrosion resistance but the austenitic group have greater resistance.

BLÜCHER products are manufactured from high grade austenitic stainless steel in grades AISI 304, suitable for most environments and AISI 316L suitable for corrosive environments such as marine installations or other aggressive locations

If AISI 316L is required add suffix S to type no.

Sealing rings to BS 2494: 1986 (Materials for elastomeric joints for pipework and pipelines), are moulded from EPDM synthetic rubber and are specially designed for the BLÜCHER® EuroPipe ring groove.

Working temperature range for EPDM sealing rings is -40° to +100° C.

Special sealing rings are available if required e.g. FPM (Viton). For advice regarding the suitability of elastomeric sealing rings in chemical environments consult our Technical Department.

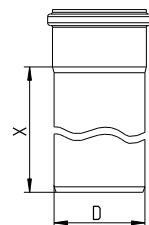

■ Finish

All pipes and fittings are chemically descaled (acid pickled) in order to enhance the natural corrosion resistance and provide a uniform aesthetically pleasing matte silver finish. Enhanced finishes can be provided if required (electro polished, powder coated etc.) at extra cost.

Standard pickle finish Brush polish finish Bright polish finish Powder coated

For a complete range of BLÜCHER drainage products please visit our web site at www.blucher.co.uk
Any non standard fittings or special fabrications can be made on request

Fixing and support

VERTICAL FIXING

All vertical pipework should be provided with pipe brackets at maximum of 3 m intervals. Brackets to be placed under ring seal sockets whenever possible.

HORIZONTAL FIXING

All horizontal pipework should be provided with pipe brackets at maximum of 3 m intervals. Brackets to be placed under ring seal sockets whenever possible.

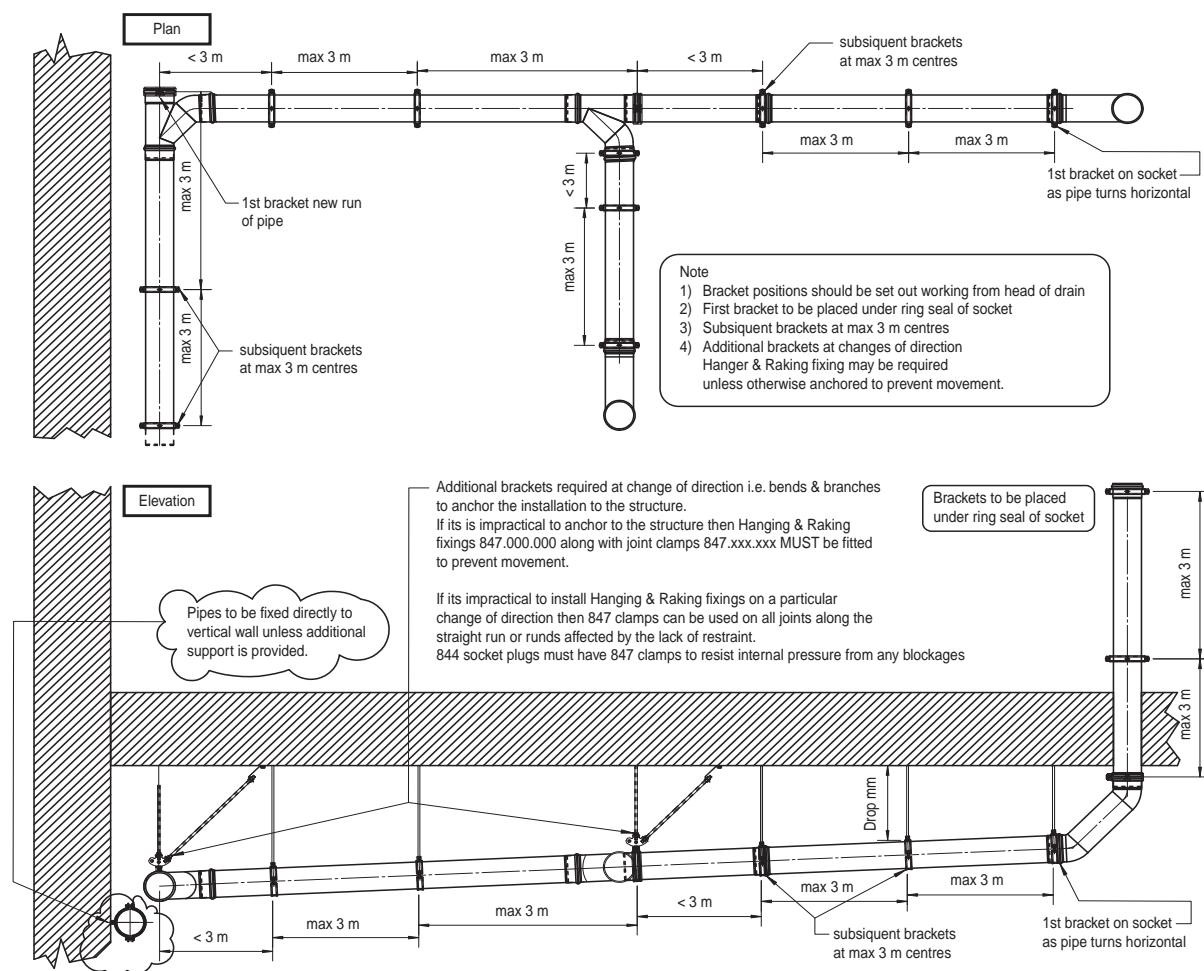

Additional brackets required at change of direction, ie bends and branches, to anchor the installation to the structure. If

it is impractical to anchor to the structure then Hanging & Raking fixings 847.000.000 along with Joint Clamps 847.xxx. xxx **MUST** be fitted to prevent movement.

If it is impractical to install Hanging and Raking fixings on a particular change of direction then 847.xxx.xxx clamps can be used on all joints along the straight run or runs affected by the lack of restraint.

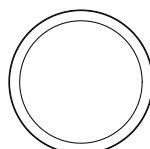

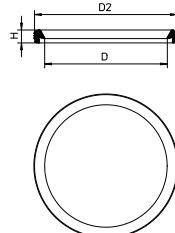

844 Socket plugs must have 847 clamp to resist internal pressure from any blockage

Horizontal pipe runs are always to be installed with a gradient. If no self-cleansing calculation is available, a gradient of 20 ‰ is recommended in gravity systems. Horizontal pipe runs in vacuum systems are to be installed in accordance with the recommendations of the vacuum system supplier.

006.050.160	5705499124132	Support base for electrical pipe cutter

CUTTING OIL/JOINTING LUBRICANT

Jointing lubricant is applied to make jointing a simple action. After a few days the lubricant will dry out and lose its lubricity making subsequent demounting of a joint difficult. If subsequent demounting of joints can be envisaged then we can supply a silicone based lubricant that will not dry out. BLÜCHER jointing lubricant is based on a mild and harmless liquid detergent that is biologically degradable. BLÜCHER cutting oil is recommended for use with BLÜCHER® EuroPipe pipe cutters.

Flow tables

INTRODUCTION

Stainless Steel pipes are hydraulically smooth (Ks value 0.003mm) and are less susceptible to scaling than other pipe materials e.g. cast iron.

Pipe manufacturers often claim very low roughness coefficient values (Ks) but for design purposes 0.6mm for Surface Water drainage and 1.5mm for Foul drainage are recommended in BS EN 752:4 and should be used. BS EN 752:4 further recommends that where surface water drains remain clean, unsoiled and in good condition throughout their design life, the roughness will depend principally on the pipe material. In such cases, recommended pipe roughness values (ks) can be obtained from H R Wallingford Tables for Hydraulic design of pipes.

FLOW TABLES

The flow tables are based on the Colebrook-White equation and are full bore velocity and discharge values.

Velocities (V) are in metres/second (0.76 m/s is regarded as the minimum for self cleansing in foul sewers).

Discharge capacities (Q) are in litres/second.

PIPE SIZING

Internal Soil Waste and Rainwater pipes should be sized in accordance with the requirements of BS EN 12056 - Gravity drainage systems inside buildings.

External Below Ground Foul and Storm Drains should be sized in accordance with the requirements of BS EN 752 - Drain and sewer systems outside buildings.

Hydraulic Flow Data - Roughness Coef Ks=0.6

Installation

BELOW-GROUND INSTALLATION

Filling around the pipe

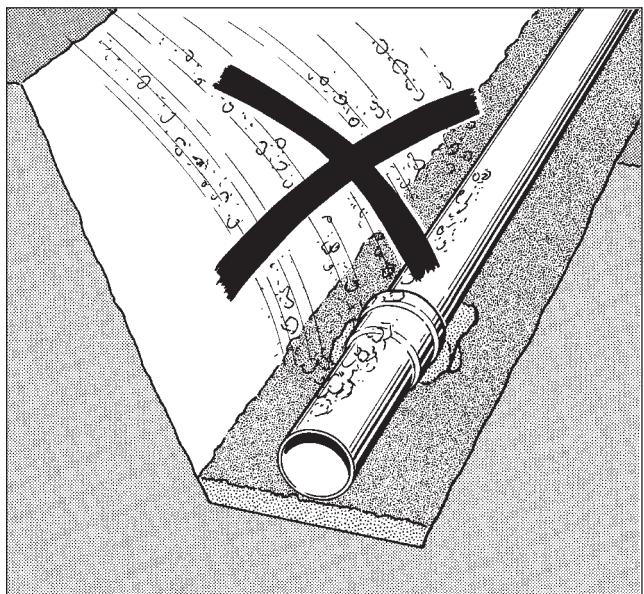

Filling around the pipe can only start when the line and level of the pipe has been checked and approved.

Compression

Avoid tipping the filling directly on to the pipe.

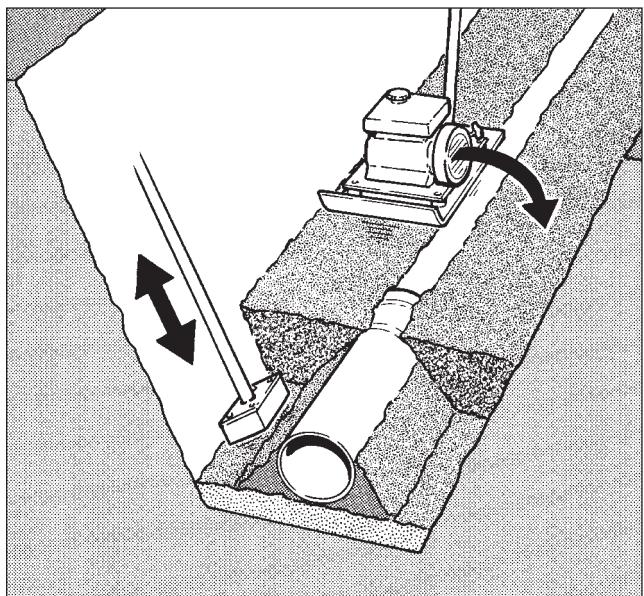

If a machine is used for compression, the equipment's own weight and impact force must be adapted to conditions.

The filling should be compressed to at least 93%.

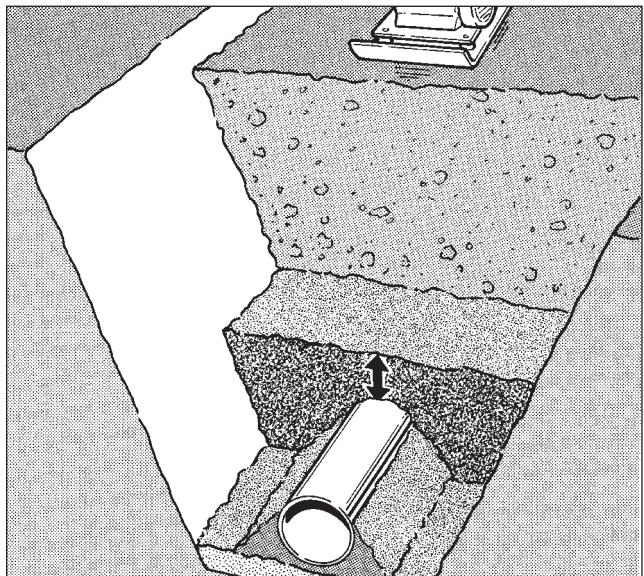

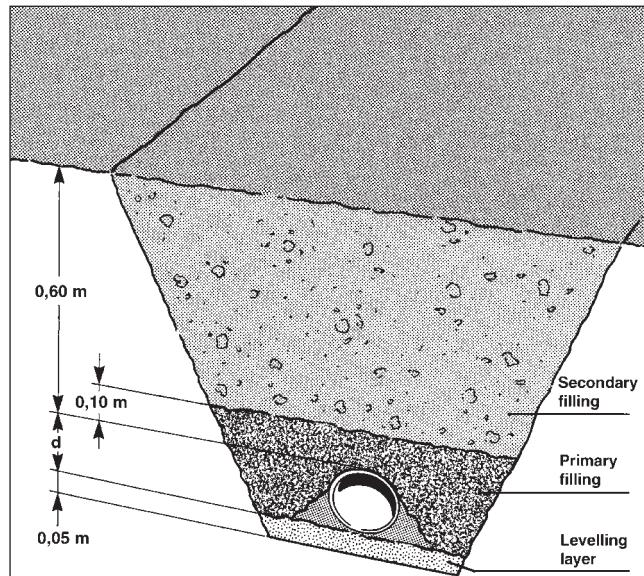

Filling in the excavation

Soil from the excavation can be used for filling, but larger stones and blocks may not be used. Compression of the filling material outside reinforced areas is not necessary if the settling will not cause problems or damage.

Further guidance can be obtained from BS 5955 Pt 6

Installation

JOINT CLAMPS

Drainage systems for soil, waste water and rainwater in above-ground installations are gravity systems, which are free draining and should not become subjected to internal hydrostatic pressure unless a blockage occurs.

The BLÜCHER® EuroPipe drainage pipework system has push-fit joints and consequently will not resist internal hydrostatic pressure, unless precautions are taken to ensure that the joints will not slide apart.

Appropriate fixing to the building, as recommended, will prevent the joints from sliding apart in most cases, upto approx. 10 m head. If it is difficult or impossible to fix the pipes to the building, joint clamps (type 847.xxx.xxx) can be used to prevent the push-fit sockets and spigot ends from sliding apart in the event of a blockage causing internal pressure to be generated.

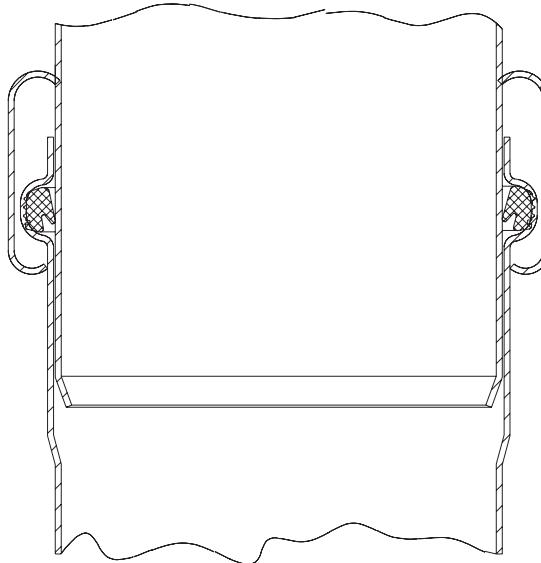

Fig. 1

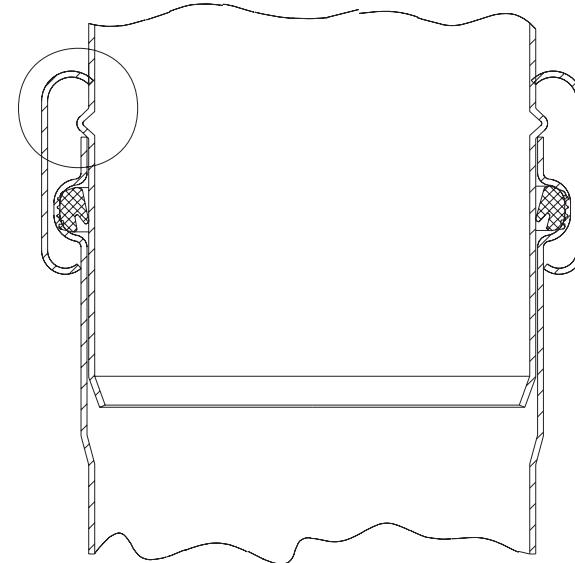

Fig. 2

Joint clamps can be used in two ways: They can simply be tightened (16Nm) (see Fig. 1), or the spigot end can be provided with dimples for the clamps to grip (see Fig. 2).

The max. acceptable pressure depends on the method chosen. A joint with dimples on the spigot end can, as shown below, withstand a higher pressure than a joint without dimples.

Push-fit socket and spigot end without dimples, with joint clamp type no. 847.xxx.xxx, can withstand the following pressures:

Pipe dimension	Max. pressure
Ø 40 mm	+ 2.0 bar
Ø 50 mm	+ 2.0 bar
Ø 75 mm	+ 2.0 bar
Ø 82 mm	+ 2.0 bar
Ø110 mm	+ 2.0 bar
Ø125 mm	+ 1.0 bar
Ø160 mm	+ 1.0 bar
Ø200 mm	+ 0.5 bar
Ø250 mm	+ 0.2 bar
Ø315 mm	N/A

Push-fit socket and spigot end with dimples, with joint clamp type no. 847.xxx.xxx, can withstand the following pressures:

Pipe dimension	Max. pressure
Ø 40 mm	+ 3.0 bar
Ø 50 mm	+ 3.0 bar
Ø 75 mm	+ 3.0 bar
Ø 82 mm	+ 3.0 bar
Ø110 mm	+ 3.0 bar
Ø125 mm	+ 3.0 bar
Ø160 mm	+ 3.0 bar
Ø200 mm	+ 2.5 bar
Ø250 mm	+ 2.0 bar
Ø315 mm	N/A

Installation

DIMPLES ON THE SOCKET END

For pipe dimensions OD 50, 75, 110, 125, 160 and 200 mm, a number of dimples are pressed on the spigot end of the pipe with a special tool before jointing with the socket end.

The dimples can be pressed very quickly. When the spigot end has been mounted in the socket end, the joint clamp can be mounted in the usual way so that the part of the joint clamp holding the spigot end covers the dimples (see Figure 2).

The table right shows the number of dimples to be pressed on the pipe for the joint to be able to withstand 3 bar.

Pipe dimension	No. of dimples
Ø 40 mm	N/A
Ø 50 mm	2
Ø 75 mm	2
Ø 82 mm	2
Ø 110 mm	4
Ø 125 mm	5
Ø 160 mm	8
Ø 200 mm	12
Ø 250 mm	16
Ø 315 mm	N/A

The tool consists of a set of special jaws for the electro-mechanical tool used in pressfitting systems (see Fig. 3).

It is important that the joints are completely tightened.

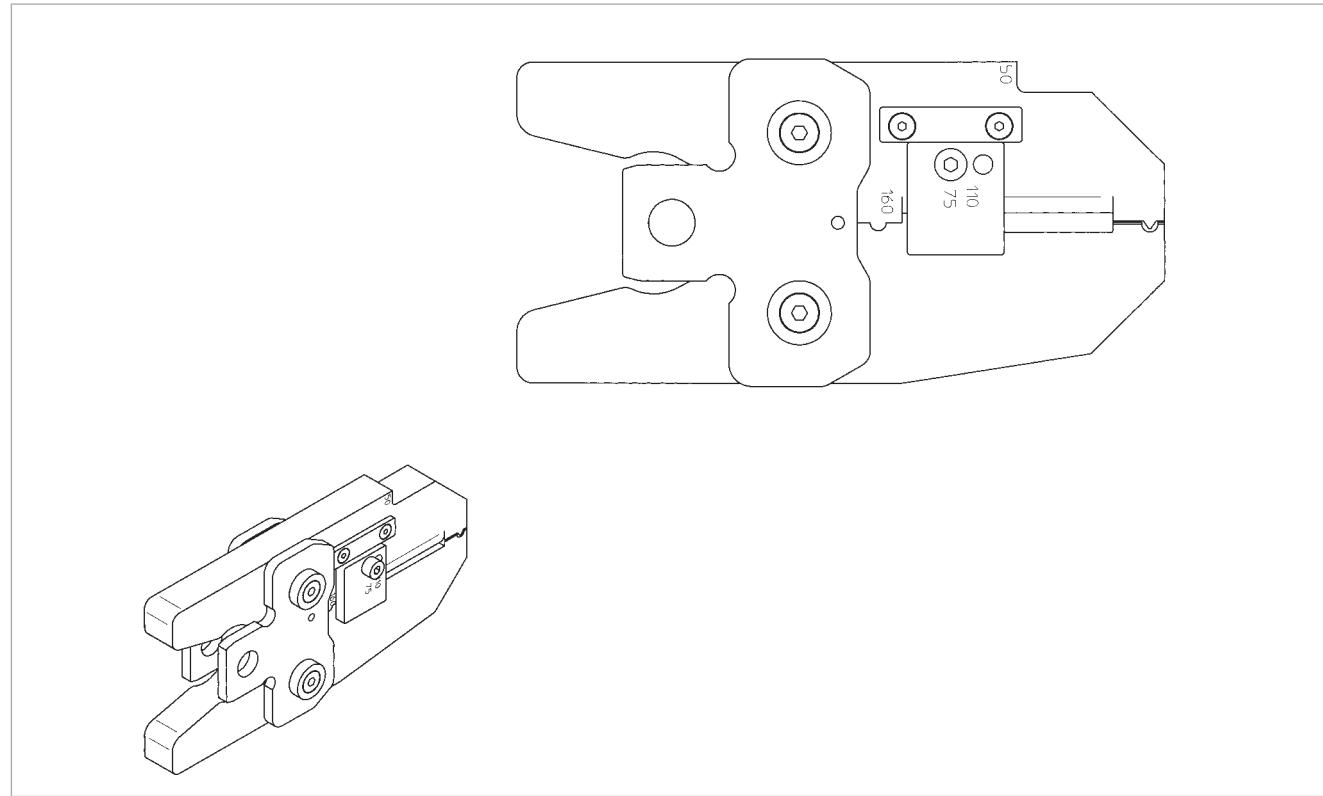

Fig. 3

Using socket plug clamps as access plugs

As stated above, drainage systems for waste water and rainwater in above-ground installations are gravity systems which are free draining and should not become subjected to internal hydrostatic pressure unless a blockage occurs.

Under these conditions, joint clamps are not necessary to retain the access plugs in place. As it can be difficult to remove the

access plugs after the lubricant applied on the installation has been washed away, using non-drying silicone as lubricant on these joints should be considered. However, if the access plugs are to be secured to prevent being pushed out, e.g. as a result of an unforeseen blockage in the pipe system, 847 joint clamps should be used.

Installation

BLÜCHER® EuroPipe

BLÜCHER® EuroPipe stainless steel drainage pipework system is a light-weight push-fit piping system comparable to plastic pipework systems in weight and to cast-iron pipework systems in strength.

Pipes are available in OD40 - OD315 mm in lengths ranging from 150 cm to 6 m. In addition, the pipes can be cut to length on site. For this purpose we recommend the BLÜCHER® pipe cutter, (see page 36).

Considering the whole-life costs of the pipework system, BLÜCHER® EuroPipe is the most cost-efficient choice, offering approximately 40% saving on installation time as compared to cast-iron pipework systems as stated in BSRIA data sheet 5.11.2

Being non-combustible and not damaged by impacts as opposed to plastic pipework systems, BLÜCHER® EuroPipe offers lower whole-life costs as stated in Building Performance Group Ltd. assessment report no. 1732.

Testing

Sanitation

All pipework systems above or below ground should be tested in accordance with BS EN 12056 annex NG.3

This allows for an air test of 38mm water gauge to be applied without leakage for 3 mins.

There is no justification for a water test to be applied to the whole of the system. The part of the system mostly at risk is that below the lowest sanitary appliance. This may be subjected to a water test up to the level of the lowest appliance, but must not exceed 6m head.

All rainwater pipework should be tested in accordance with BS EN 12056 annex NG4.

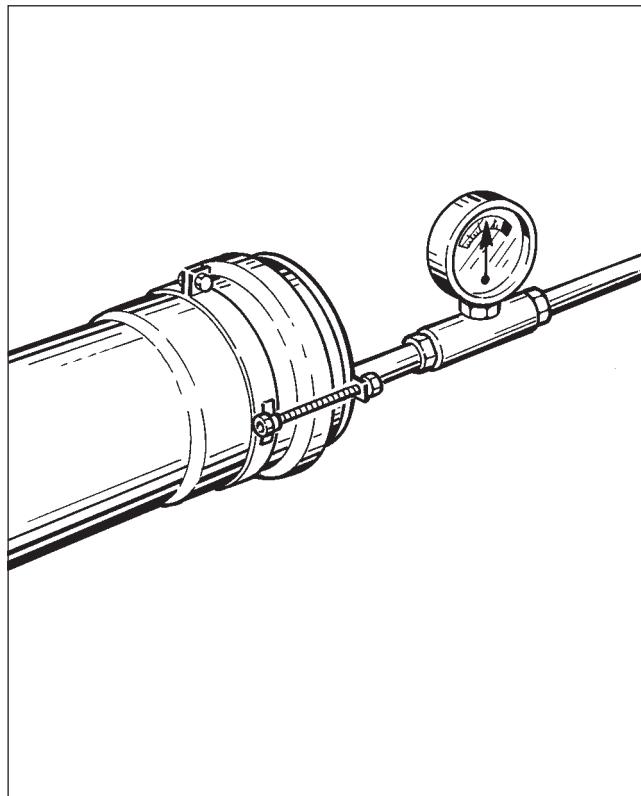

This also allows for an air test of 38mm water gauge to be applied without leakage for 3 mins.

Leakage test

All fittings manufactured in Denmark are individually tested before leaving the factory.

The test is carried out with an air pressure of 0.5 bar (5m head). Any leak will then be immediately evident.

Products are also tested at regular intervals with water pressure and vacuum by BLÜCHER and by independent approval authorities.

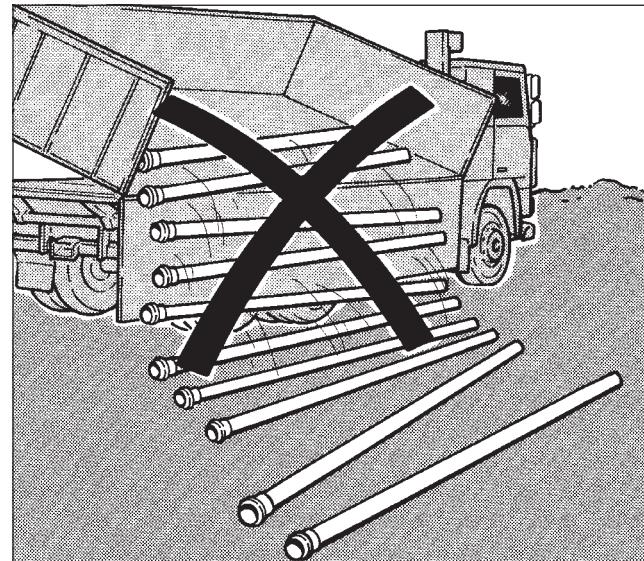

Handling

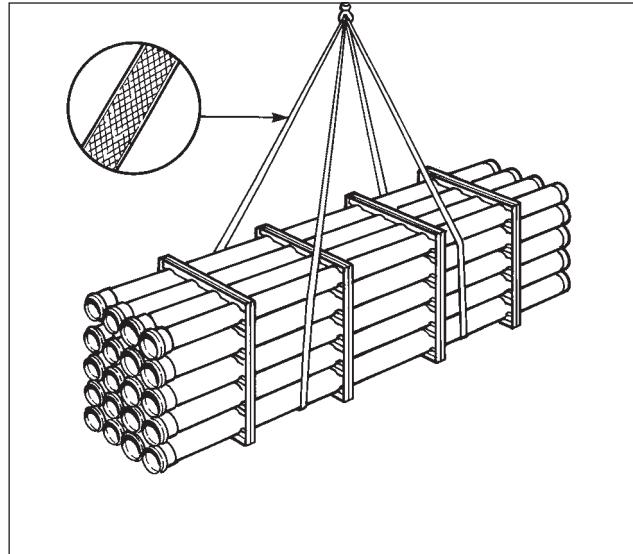

TRANSPORT, UNLOADING AND HANDLING

General:

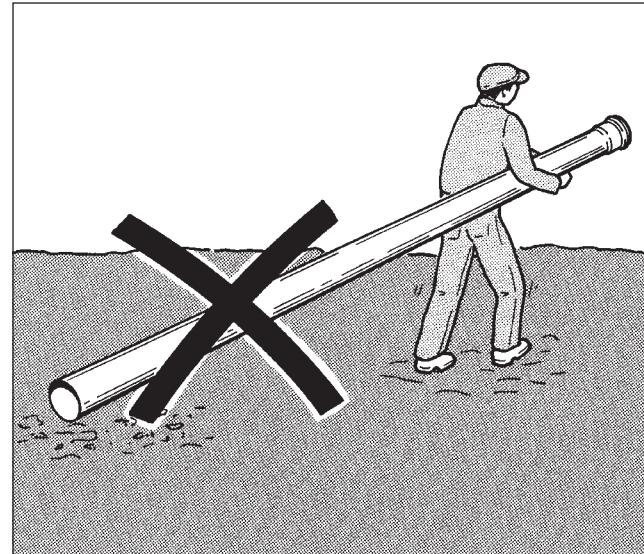

All pipe shipments from BLÜCHER are cradled and packed on pallets. Fittings are packed in cardboard boxes and stacked on pallets. All goods are carefully packaged to avoid damage during transport.

Pipes and fittings must not be dumped off trucks.

Support straps for loading and moving bundles of pipes by crane must be made of textile, canvas or similar material.

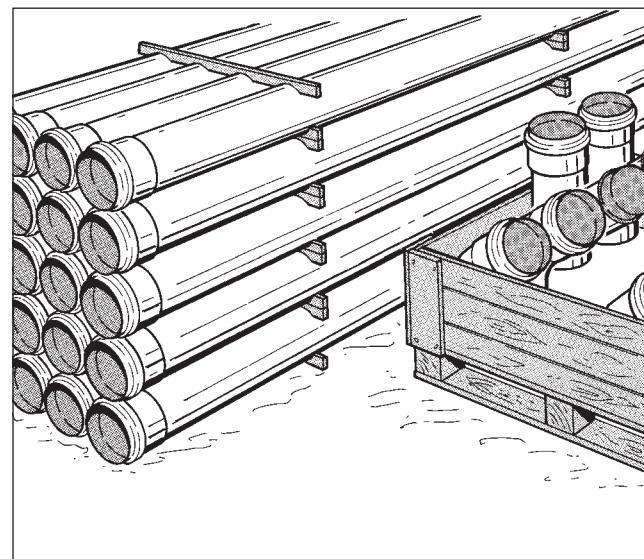

Pipes and fittings must not be dragged along the ground or other surfaces which could cause damage.

Storage

To avoid deformation of, or serious damage to, pipes and fittings, we recommend storing the products in their original packaging until they are to be used.

Store pipes and fittings so that they do not come into contact with carbon steel, which can leave traces of corrosion on the stainless steel. Pipes and fittings must also be stored a safe distance away from sparks and spray from e.g. angle grinders and oxyacetylene torches.

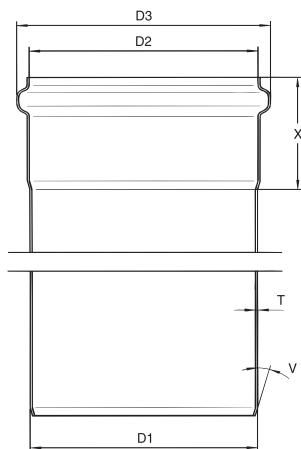

Pipe bundles and loose pipes should be stored on a flat surface and supported so that the pipes do not rest on their sockets.

Technical data

DIMENSIONS

For pipe socket dimensions and wall thicknesses for 40 mm, 50 mm, 75 mm, 82 mm, 110 mm, 125 mm, 160 mm, 200 mm, 250 mm and 315 mm outside diameters - see Figure 1.

315	316	344	116	20°	2

Figure 1. Pipe dimensions (in mm).

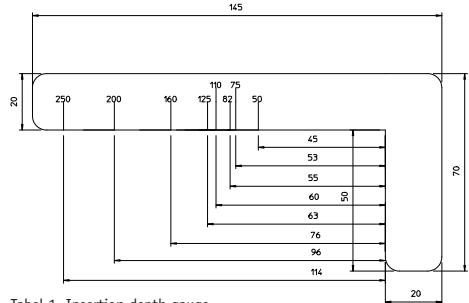

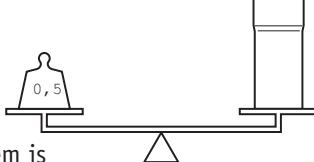

Table 1. Insertion depth gauge.

WEIGHT

Being manufactured from lightweight stainless steel the BLÜCHER® EuroPipe system is easy to handle and install. It offers major savings on labour costs when compared with traditional pipe systems. The weight savings are of great benefit when used on multi-storey buildings, ships and offshore structures.

Diameter	Pipe only	Pipe filled with water
40 mm	1.00	2.70
50 mm	1.30	3.01
75 mm	1.94	6.03
82 mm	2.15	7.35
110 mm	2.87	11.86
125 mm	3.30	14.96
160 mm	5.31	24.48
200 mm	8.12	38.60
250 mm	9.70	58.80
315 mm	15.80	91.80

Figure 2. Pipe Weights (Kg/m).

CUTTING

May be carried out with either BLÜCHER Cutting and Bevelling Tools (manual or electric) or by a fine toothed metal saw. Adequate mineral oil lubrication (type no. 007.500.050) is recommended. When a saw is used ensure pipe is cut square, chamfered and deburred prior to jointing.

Note!

When cutting and jointing BLÜCHER® EuroPipe care should be taken to wear all site PPE as required. Site gloves will protect against any potential sharpe edges from the cutting process, when handling and jointing.

BLÜCHER
Cutting and
Bevelling Tool
(manual)

Type No. 006.050.110 to cut and bevel 50 mm, 75 mm, 82 mm and 110 mm diameter BLÜCHER® EuroPipe. Type No. 006.125.200 to cut and bevel 110 mm, 125 mm, 160 mm and 200 mm diameter BLÜCHER® EuroPipe. Type No. 006.200.315 to cut and bevel 200mm and 250mm.

BLÜCHER
Cutting and
Bevelling Tool
(electric)

Type No. 800.050.160 to cut and bevel 50 mm, 75 mm, 82 mm, 110 mm, 125 mm and 160 mm diameter BLÜCHER® EuroPipe.

JOINTING

Mark insertion depth on spigot end of pipe as figure 1, or using Insertion depth Gauge. Lubricate spigot with BLÜCHER® lubricant. Apply standard soap based lubricant for normal use (type no. 007.100.050) or silicone based lubricant (type no 007.200.040) if there may be a requirement to demount the joints at a later date.

Push fit to marked insertion depth, this allows for expansion

All pipes and fittings have sockets. Direction of flow should be from spigot into socket to ensure the correct use of the built in fall in the fittings. Couplings may be used to fit cut pipe lengths.

BLÜCHER Lubricant

Type No. 007.100.050	1/2 litre soap lubricant
Type No. 007.100.050.SIL	1/2 litre Silicon oil
Type No. 007.200.040	400 ml silicon lubricant
Type No. 007.000.000	Atomizer

Technical data

EXPANSION

Stainless steel has a low coefficient of expansion. This approximates to 1 mm per metre length of pipe per 60° C change in temperature, see Figure 3.

Polyethylene	12.00
PVC	8.00
Aluminium	2.40
Copper	1.62
Stainless Steel	1.60
Cast Iron	0.90

Figure 3. Coefficient of expansion of different pipe materials.
(Increase in mm per m when heated up by 100° C.)

An allowance for expansion is only therefore required when the pipes are carrying hot waste water, see Jointing, page 26.

FIRE RESISTANCE

The BLÜCHER® EuroPipe system being of stainless steel is inherently fire resistant and may be considered as non-combustible for the requirements of the Building Regulations.

i.e. When exposed to a temperature of 800° C. will not soften or fracture to the extent that flames or hot gases will pass through the pipe wall.

It is recommended that any structural opening for the pipe be kept as small as possible and fire-stopped around the pipe. Suitable fire-stop materials are:

I) cement mortar, II) gypsum based plaster, III) intumescent materials.

CHEMICAL RESISTANCE

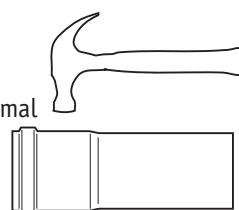

Austenitic Stainless Steels are extremely chemical resistant and are unaffected by elevated temperatures.

The BLÜCHER® EuroPipe system utilises EPDM sealing rings to provide a flexible, chemical resistant joint. For extreme applications special sealing rings are available e.g. FPM (Viton) if required. For advice regarding the suitability of BLÜCHER® EuroPipe and elastomeric sealing rings in chemical environments consult our Technical Department.

STRENGTH

All pipes and fittings have adequate resistance to the forms of loading associated with installation and normal service conditions. However, the pipes and fittings should be protected from impacts by heavy vehicles such as fork lift trucks.

ENVIRONMENT

Stainless steel is capable of endless recycling with no loss of physical properties. The stainless steel materials used by BLÜCHER have a recycled scrap content of approx. 70%.

Environmentally friendly manufacture, long life and 100% recyclability - BLÜCHER® drainage products are part of the ecological cycle and recommended by Greenpeace as a suitable alternative to PVC.

PREFABRICATION

Purpose made fittings can be manufactured to customers requirements. For information regarding the prefabrication service consult our Technical Department.

EARTH CONTINUITY

The BLÜCHER® EuroPipe push-fit waste pipework system has been tested and certified by AREPA Test and Calibration in Denmark, to be classified as equipotentially bonded without the addition of earth continuity clamps.

Copies of the test procedure and results are available upon request to our Technical Department but may be summarised as follows:

1. Resistance measurements are taken with pipe/ fittings pushed together and also pulled apart by 4 mm. In each case values are taken and the inserted pipe rotated 120 degrees and 240 degrees and retested.
2. A current of 10A DC is applied and resistance values calculated.
3. Resistance values between 0.25mΩ and 19.68mΩ were obtained.

It is recommended that the pipework system is checked regularly for equipotential bonding in case accidental damage or modification has occurred.

TESTING

Testing in accordance with BS EN 12056 Sanitary pipework or BS EN 752 Building drainage can be carried out immediately following installation.

It is recommended that pipework is tested in sections where appropriate.

Technical data

APPROVALS AND LABELLING

EN 1124

The BLÜCHER® EuroPipe system (pipes and fittings) is made, tested and checked under the EN standards EN 1124-1 and EN 1124-2.

These two standards cover the following:

- EN 1124-1** specifies requirements, tests and quality controls applying to pipes and fittings.
- EN 1124-2** specifies requirements applying to pipe dimensions and dimensional tolerances for various fittings and pipes.

The above EN standards were prepared by the European standardisation organisation CEN. The BLÜCHER® EuroPipe system will thus soon obtain the recognised CE approval (CE label).

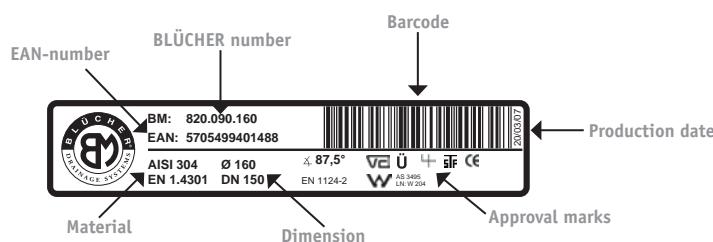

These approvals serve as documentation that the approved product complies with all specified requirements.

TYPE APPROVALS

BLÜCHER® EuroPipe has also been tested and approved in Norway, Sweden, Finland, England, Germany and Switzerland, and for ships and off-shore installations in accordance with Bureau Veritas, Lloyd's Register, DNV (Det Norske Veritas), Germanischer Lloyd, Rina (Registro Italiano Navale), and ABS (American Bureau of Shipping).

LABELLING

Pipes and fittings

Stainless steel AISI 304 - RED label

Stainless steel AISI 316L - GREEN label

NEGATIVE PRESSURE RATING

BLÜCHER® EuroPipe is suitable for use on syphonic rain-water schemes and vacuum drainage applications.

Negative Pressures:

Diameter	Standard seal
40 mm	-0,85 bar
50 mm	-0,85 bar
75 mm	-0,85 bar
110 mm	-0,60 bar
125 mm	-0,60 bar
160 mm	-0,60 bar
200 mm	-0,60 bar
250 mm	-0,60 bar
315 mm	N/A

Roof drainage

BLÜCHER® Drain Roof

bimready
files at bimstore.co.uk

BLÜCHER offers a stainless steel roof drainage system suitable for:

- Flat roofs of all designs
- Downpipes from roofs of all designs
- Roofs with bitumen or single ply roof membrane
- Equally suitable for gravity and siphonic systems

BLÜCHER® roof drainage system comprises strong products which are capable of resisting impacts, corrosion as well as fire and require minimal maintenance.

Gravity roof drainage is used in traditional new build or refurbishment projects.

Siphonic roof drainage creates a flow rate approximately 3 - 5 times higher than in a gravity system.

This means that a larger roof area can be drained by fewer roof drains connected to one pipe string in smaller diameter than that required for the gravity system.

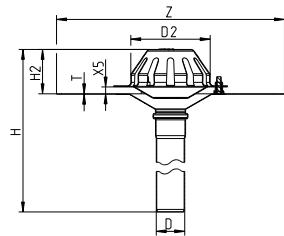

It is BLÜCHER's mission to provide a high-quality roof drainage system with roof drains easily connected to the BLÜCHER® EuroPipe pipework system, offering the customer a safe roof drainage system that minimizes installation time and ensures high performance as regards

- High flow capacity
- Ease of installation
- Non-combustibility
- Long product life
- A1 fire approved

for siphonic

Gravity and siphonic roof drainage systems

BLÜCHER® gravity roof drainage

Gravity System

Traditional gravity system with drains spread over the roof area and water led from the roof through downpipes to a below-ground pipework system

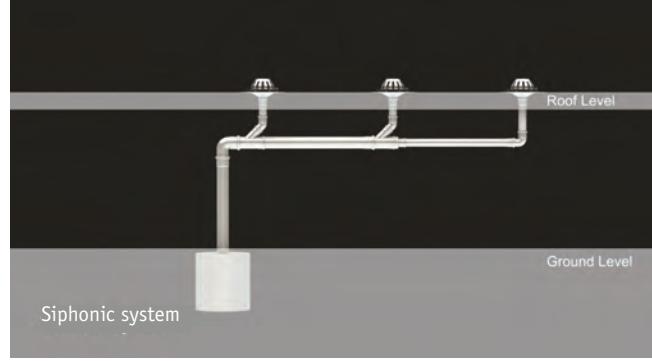

Gravity System

BLÜCHER® siphonic roof drainage

Siphonic system

Siphonic system with fewer drains and a small-diameter horizontal pipework system underneath the ceiling. More water is transported through the pipework due to faster flow and a filled pipework system, reducing if not completely removing below-ground drainage.

Siphonic system

Gravity and siphonic roof drainage systems

Advantages of BLÜCHER® roof drainage

All in stainless steel AISI 304 or AISI 316L Corrosion-resistant, temperature-resistant and impact-resistant

Not affected by UV

Minimal expansion caused by temperature changes

Retains its aesthetically pleasing finish, requiring minimal maintenance

Robust construction that resists vandalism

100% recyclable

Fire-approved

Non-combustible, fire rated A1

Thin-walled pipes

Light-weight and easy to handle, makes installation fast and easy and provides better working environment

Fewer fixing points required due to the low weight of the pipework system

Larger inside diameter in combination with the low surface roughness of stainless steel provides up to 30% higher flow capacity compared to similar outside diameter cast-iron pipes

Smooth inside surface

Excellent self-cleansing properties

High flow rate

Prevents blockages

Push-fit jointing

Fast and easy pipe assembly

Pipe sizes OD 40 - 315 mm and lengths 0,15 - 6 meters

Compact dimensions take up less space

Less cutting to size required, thereby less installation costs

Equally suitable for siphonic and gravity

One pipework system fits all applications

Equipotential bonding

BLÜCHER® EuroPipe is designed to be equipotentially bonding from drain to sewage

BLÜCHER® siphonic roof drainage offers the added advantages of

Only one downpipe to the ground

Less piping necessary

Less below-ground work

Fewer roof drains required

Fewer cut-outs in the roof required, thereby lower costs

Small pipe diameters

Light-weight, takes up less space as compared to traditional plastic or cast-iron systems

Pipes approved for vacuum

Safe solution: OD 40 - 75 mm = -0,85 bar; OD 110 mm = -0,60 bar

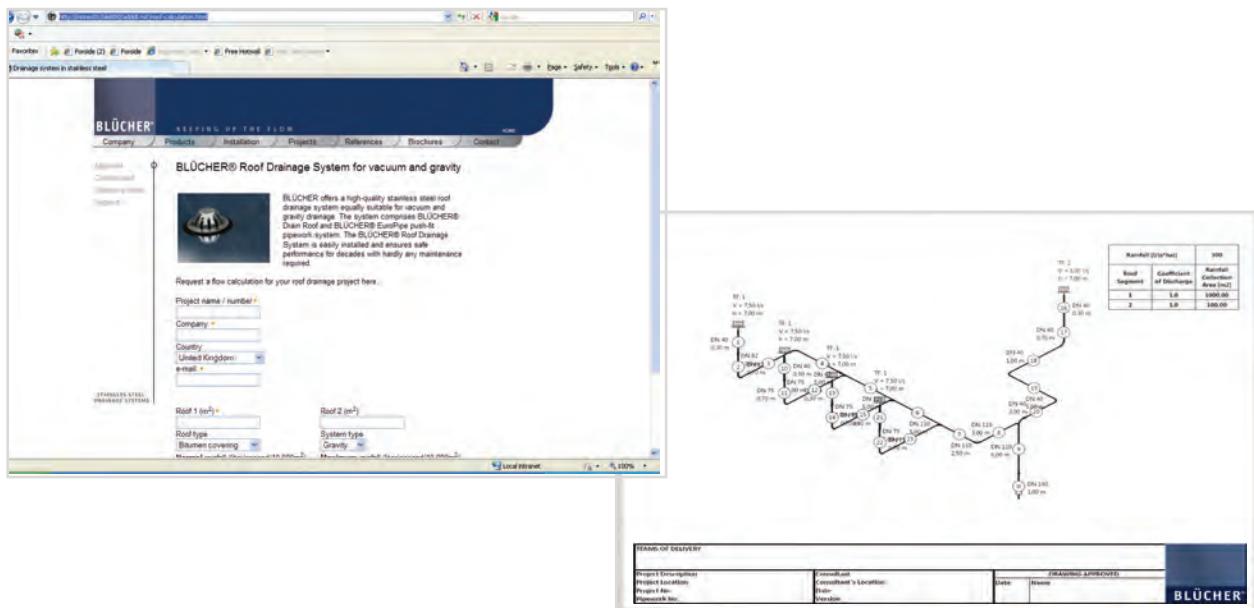

Horizontal pipes without fall

Ease of installation

Flow calculations

BLÜCHER offers to assist with the design and calculations.

Enquiries can be submitted to mail@blucher.co.uk, or call BLÜCHER on: +01937 838000

Installation video for BLÜCHER® Drain Roof is available at www.blucher.co.uk

BLÜCHER® Drain Roof

Siphonic drains and gravity drains

BLÜCHER® Drain Roof - siphonic

BLÜCHER® Drain Roof - gravity

Owing to the siphonic plate of the drain, the pipe is quickly 100% filled, keeping air out of the system and allowing full bore discharge to induce a siphonic action resulting in higher velocities and greater discharge.

Traditional gravity drainage system with pipes filled max. 33%.

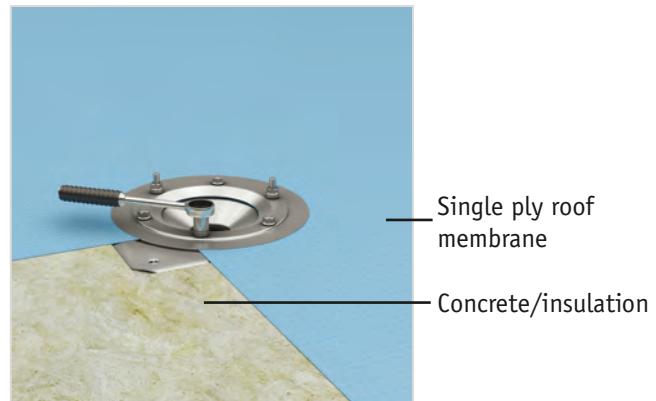

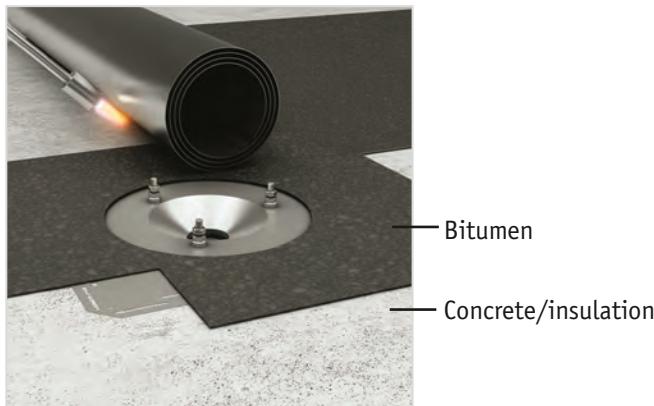

Both types of drains are available for roofs with bitumen or roofs with single ply roof membrane, shown above are drains for roofs with single ply roof membrane.

BLÜCHER® Drain Roof for bitumen and single ply roof membrane

BLÜCHER® Drain Roof for bitumen

BLÜCHER® Drain Roof for single ply roof membrane

Roof drains for bitumen are also available with premounted bitumen collar quality PF 5200 SBS as recommended by Danish roofing felt information council TOR

In connection with single ply roof membranes it is important that the sealing material of the roof drain matches the material of the membrane to avoid migrating of softeners from PVC to the other material, since this could make the PVC material brittle, resulting in a higher risk of cracking.

BLÜCHER® Drain Roof comes as standard with a PVD sealing ring for use with PVC membranes. As alternative, to be purchased separately, we offer a SI sealing ring which is recommended for use with TPO/FPO membranes.

Both types of drains are available as siphonic drains and as gravity drains, shown above are siphonic drains.

BLÜCHER® Drain Roof with perforated upper part for green roofs and similar applications

BLÜCHER® Drain Roof with perforated upper part for bitumen

BLÜCHER® Drain Roof with perforated upper part for single ply membrane

Outdoor drains

Stainless steel drains for roof gardens, green roofs and over below-ground car parks.

The drain is installed in the roof structure, usually comprising concrete deck, membrane, insulation, gravel, sand and stone paving.

The outdoor drain consists of an adjustable upper part 200x200 with a perforated pipe OD110 or 160 mm, which can be cut to length. The upper part fits into the BLÜCHER® Drain Roof lower parts for single-ply membrane and bitumen in gravity drainage systems.

Through the perforated pipe between frame and lower part water is drained from the sand or gravel in which the drain is installed, and into the lower part. To prevent sand and gravel from getting into the drain together with the drainage water, the perforated pipe is to be wrapped in a textile cloth.

A sand bucket and a range of gratings are available for the outdoor drains.

Applicable standards

EN 1253

BLÜCHER® Drain Roof has been tested by LGA Würzburg and complies with the requirements of EN 1253 2.

BLÜCHER has its own state-of-the-art laboratory with facilities to design and develop drainage products in accordance with EN 1253.

BLÜCHER is committed to offering a thoroughly tested roof drainage system that complies with applicable standards and regulations as to performance and installation.

EN 12056, DS 432 and VDI 3806

BLÜCHER recommends installation in accordance with DS 432/EN 12056 3 and VDI 3806. This ensures that the BLÜCHER® roof drainage system can be used in all common building projects in Europe.

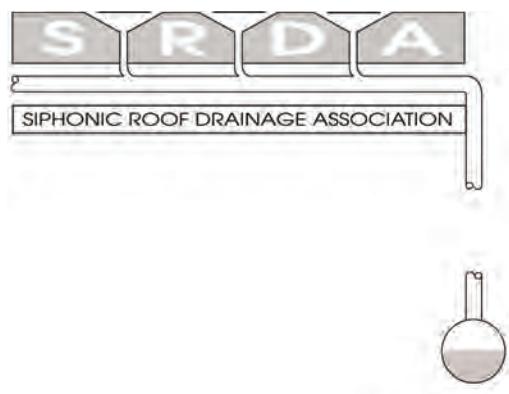

VDI 3806 are guidelines for siphonic roof drainage, used as applicable guidelines in the EU.

TOR recommendations

BLÜCHER® roof drainage system complies with the recommendations of TOR (Danish roofing felt information council).

SRDA

Member of SRDA - Siphonic Roof Drainage Association. Comply hereby to BS8490:2007

Fire approved

Fire rated A1

Accessories

Emergency drainage

All roof drainage systems require emergency drainage to ensure that the roof remains water tight in the event of a rain storm rate in excess of the chosen design storm rate. For roofs with bitumen and for roofs with single ply roof membrane BLÜCHER offers an emergency drainage system to be installed in the same way as the common roof drainage system but with a separate BLÜCHER® EuroPipe downpipe leading water away from the roof.

Thermal insulation

Where there is a need for protecting the roof from condensate, an insulating sleeve can easily be fitted around the drain outlet. For BLÜCHER® Drain Roof we have selected a non-combustible insulation core which performs optimally even at temperatures on the roof below 5 °C, thus minimizing condensation.

Optionally, BLÜCHER® Drain Roof can be supplied with the insulating sleeve fitted to the drain outlet.

Trace heating

For installation in areas where ambient temperatures below 0 °C often occur, BLÜCHER offers a heating cable which is to be fitted around the roof drain and then covered by the insulating sleeve. This ensures a frost-free roof drain that will not be blocked by ice. The heating cable has a performance of 14,5 W per meter at an ambient temperature of 0 °C. Optionally, BLÜCHER® Drain Roof can be supplied fitted with heating cable and insulating sleeve.

Installation

BLÜCHER® Drain Roof

Due to the small size of the drain bowl leading the water into the piping system, only a small hole in the roof or the insulation is necessary, and this can be drilled easily and quickly.

Secure the drain to the roof by fixing the flange by means of 4 screws, or optionally secure the drain to the membrane selected for the roof.

Drain outlet piping

The roof drains come with outlet pipes of either 400 or 600 mm length, and this makes it possible to penetrate the roof insulation without any pipe joints. This makes installation fast and safe, and below the insulation BLÜCHER® EuroPipe pipes and fittings can be fitted directly to the outlet piping.

If a shorter outlet pipe is requested, the outlet pipes can be cut to the desired length on site. For this purpose we recommend the BLÜCHER® pipe cutter. (see page P36)

Installation

Suspension and fixing of pipework

The following describes the fixing of pipes for vertical and horizontal pipe runs.

Vertical piping

All vertical pipework should be provided with pipe brackets at intervals not exceeding 3 metres. Brackets to be placed under ring seal sockets whenever possible.

Horizontal piping

All horizontal pipework should be provided with pipe brackets at intervals not exceeding 3 metres. Brackets to be placed under ring seal sockets whenever possible.

Additional brackets are required at each change of direction, i.e. bends and branches, to anchor the installation to the structure. If it is impractical to anchor to the structure, then hanging and raking fixings 847.000.000 along with joint clamps 847.xxx.xxx must be fitted to prevent movement.

If it is impractical to install hanging and raking fixings on a particular change of direction, then joint clamps 847.xxx.xxx can be used on all joints along the straight run or runs affected by the lack of restraint. Socket plugs type 844 need joint clamps type 847 to withstand internal pressure from a possible blockage.

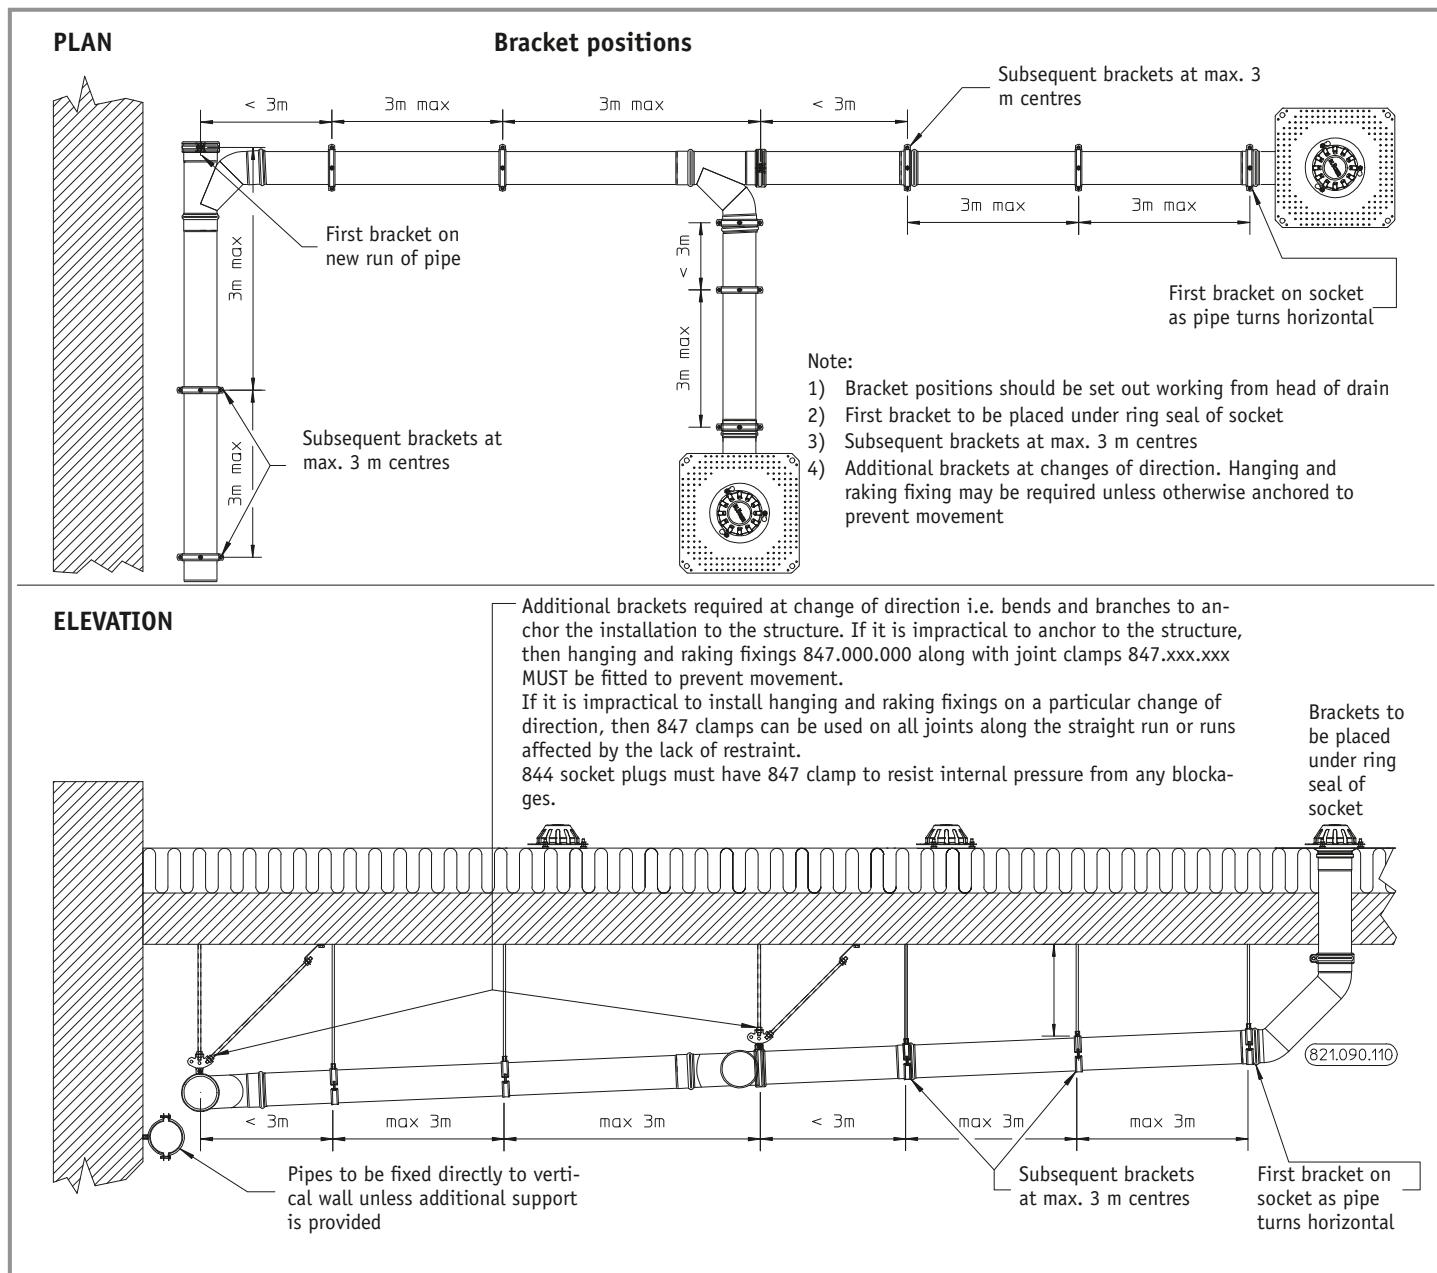

Recommended distances between pipe brackets (center - center)

Based on pipe brackets type 895.40x.xxx as offered by BLÜCHER

Pipe dimension	33% filled	50% filled	75% filled	100% filled
40	3,0 m	3,0 m	3,0 m	3,0 m
50	3,0 m	3,0 m	3,0 m	3,0 m
75	3,0 m	3,0 m	3,0 m	3,0 m
82	3,0 m	3,0 m	3,0 m	3,0 m
110	3,0 m	3,0 m	3,0 m	3,0 m
125	3,0 m	3,0 m	3,0 m	3,0 m
160	3,0 m	3,0 m	3,0 m	3,0 m
200	3,0 m	3,0 m	3,0 m	3,0 m
250	3,0 m	3,0 m	3,0 m	2,5 m
315	3,0 m	3,0 m	3,0 m	2,5 m

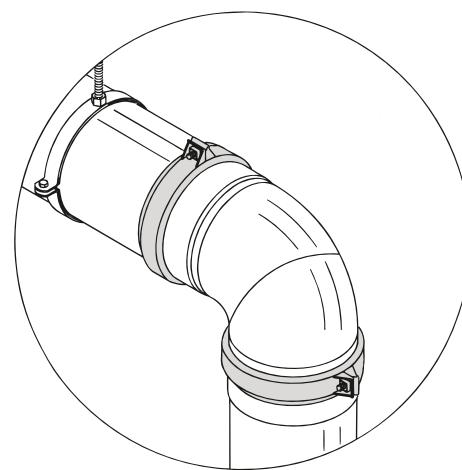

Gravity installation

We recommend the use of pipe joint clamps at the first 1 or 2 vertical joint(s) under the sealing to keep the roof drain locked to the pipework system. The maximum distances between pipe brackets can be seen in the table "Recommended distances between pipe brackets" - please note that in case of a blockage the pipes may be filled 100%

Siphonic installation

We recommend the use of pipe joint clamps at each bend or bracket and the use of the BLÜCHER® mounting plate for suspension of the drainage pipework for each 3 metres. This will safeguard the pipework system against vibrations and keep the pipes in place in siphonic roof drainage installations. The maximum distances between pipe brackets can be seen in the table "Recommended distances between pipe brackets"

Pipe joint clamps type no. 847.
xxx.xxx may be required if walls
or soffits are not accessible for
brackets.

Emergency drains

All pipework to be installed in the same way as in vacuum systems, i.e. with pipe joint clamps at each bend or bracket.

Auxiliary products to BLÜCHER® roof drainage system

Balcony drains

Stainless steel balcony drains with low built-in height, long product-life expectancy and aesthetically pleasing design for your balcony.

183.101.0XX

183.151.XXX

182.105.032

Outdoor rainwater piping

All BLÜCHER® EuroPipe rainwater downpipes are vandal-resistant, combining the aesthetically pleasing look of stainless steel with vandal-proofing of the downpiping and the other inherent benefits of stainless steel material.

Channels

Stainless steel drainage channel system suitable as gutter around a defined area, in front of doors to prevent water flowing in through the door and to collect the water to be drained off the roof area.

Installation examples

Easy and simple installation in single ply roof membrane provides high strength and a secure solution.

Roof drains for bitumen have a wide collar for secure fixing to the bitumen.

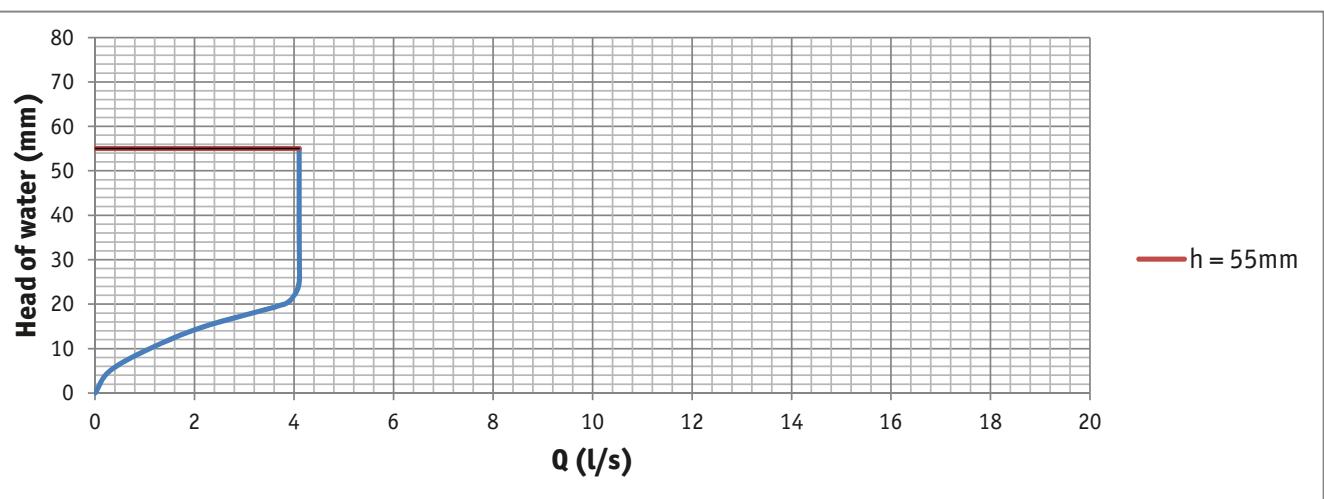

2-part roof drain

2-part roof drains can easily be installed on the roof. Use a standard roof drain in combination with a separate lower part matching the membrane type of the roof.

Flow rates for pipe dimension OD40 mm

Gravity flow boost

For gravity roof drainage systems in which flow rates exceeding those that can be achieved with the BLÜCHER® Drain Roof for gravity, are requested, roof drains for gravity system, type 40X.10X.XXX, with vacuum plate type 400.000.100 can be installed to boost the water flow through the drains.

Owing to the vacuum plate, a vacuum zone is created around the drain, and this vacuum zone will be activated immediately when the water flow reaches the larger pipe line installed in accordance with EN12056 and with our recommendations as to the installation of roof drainage with drains for gravity system.

Note: We recommend securing all BLÜCHER® EuroPipe pipe joints after the roof drains with pipe joint clamps type 847.XXX.XXX.

Test information and basis

Flow test carried out in accordance with EN1253-1, 8.11.1 (gravity), min. 1,7 l/s at 35 mm head of water

Test set-up in accordance with EN1253-2 11.2, figure 8c

Conditions:

Limits for maximum water volume in downpipes are specified in local and European regulations.

The requirements to which the acceptable flow is to be designed, are described in EN12056-3.

BLÜCHER always recommend complying with and dimensioning in accordance with applicable national and European standards.

BLÜCHER® EuroPipe offers considerable advantages when it comes to flow rates due to the large internal pipe diameter.

The table below shows flow values for BLÜCHER® EuroPipe (vertical piping) based on the Wyly-Eaton equation used in EN12056-3:2000 item 6 table 8.

Outside pipe diameter mm	Inside pipe diameter mm	Flow rate

Drains for commercial applications

Shower drains for tiled, resin and vinyl floors

bimready
files at bimstore.co.uk

Applications

For tiled and vinyl floors in:

- Private housing bathrooms
- Toilets and showers in hotels, hospitals, fitness centres, etc.

Details

- Square, triangular or circular frame
- Brushed grain finish
- Low frame height
- Grate with starlock screw-system
- Stainless steel AISI304/EN 1.4301 or AISI316L/EN 1.4404

Variants

- Side inlets Ø32/40 mm
- Vertical or horizontal outlet
- Flange for liquid or sheet membrane
- Adjustable height, rotation and tilt

Options

- Removable water trap
- Design gratings in 3 shapes and 6 designs

Series

- Series 100 without flange for concrete and tiled floors
- Series 200 for vinyl floors
- Series 300 with liquid or sheet membrane flange for concrete and tiled floors

Product database at www.blucher.co.uk

Complete drains

Concrete and tiles without membrane

Standard grating VIENNA included
Optional design gratings available

Optional filter basket
Optional removable water trap
Adjustable upper part

Lower part with or without side inlets

Concrete and tiles with liquid membrane

Standard grating VIENNA included
Optional design gratings available

Optional filter basket
Optional removable water trap
Adjustable upper part

Flange

Lower part with or without side inlets

Concrete and tiles with sheet membrane

Standard grating VIENNA included
Optional design gratings available

Optional filter basket
Optional removable water trap
Adjustable upper part
Adjustable clamping flange

Lower part with or without side inlets

Vinyl

Standard grating VIENNA included
Optional design gratings available

Clamping ring
Optional inlet deflector
Optional filter basket
Optional water trap
Adjustable upper part

Lower part with or without side inlets

Complete drains

Drain

Adjustable 2-part drains or non-adjustable 1-part drains

Grating

Standard VIENNA grating is included. Optional design gratings are not included - to be ordered separately

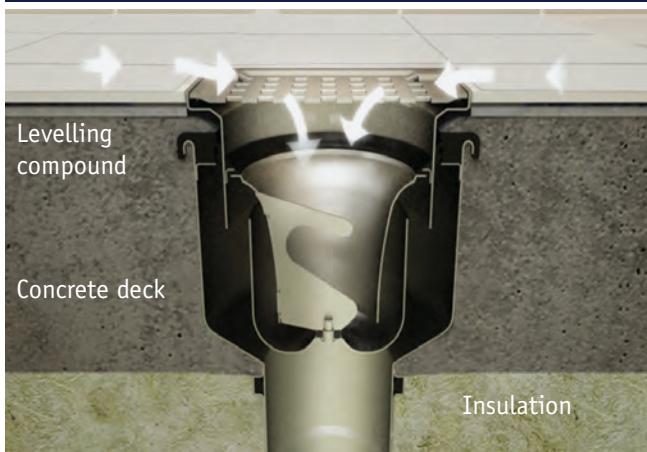

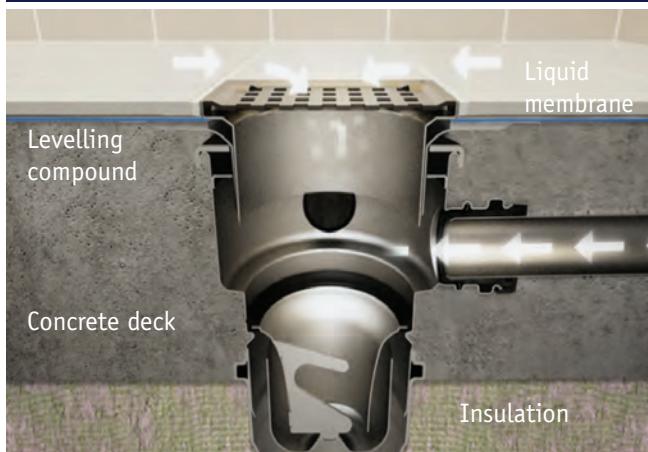

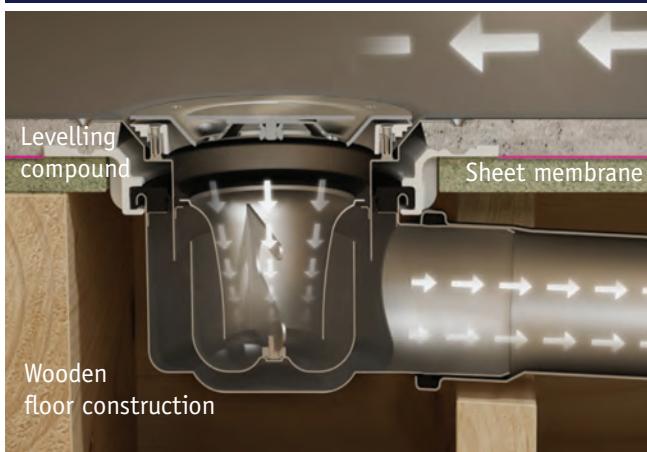

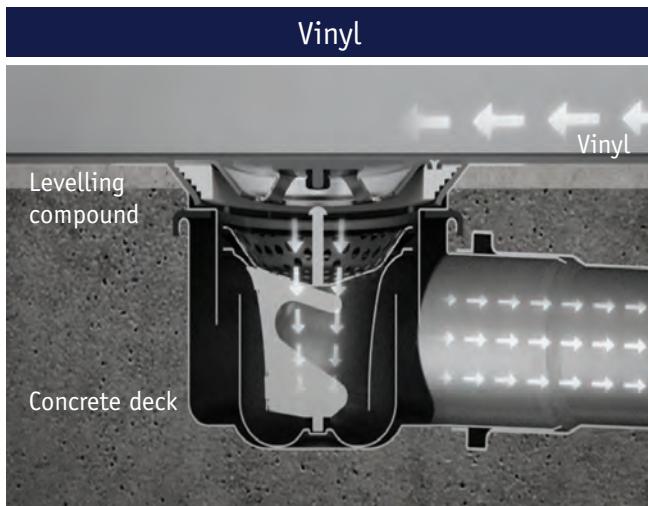

Water trap

Removable water trap not included - to be ordered separately.

Other accessories

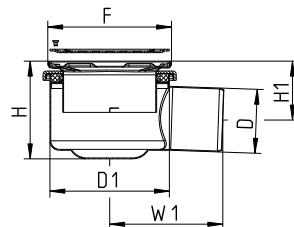

Other accessories such as filter basket not included - to be ordered separately. Most drains with side inlets come with inlet deflector.

Installation examples

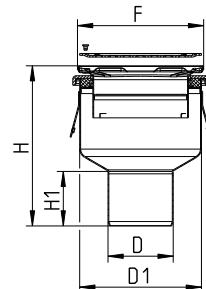

Concrete and tiles without membrane**Concrete and tiles with liquid membrane****Concrete and tiles with sheet membrane****Vinyl****Two-part removable water trap**

Due to its design the water trap has unique self-cleansing properties, and the slanted handle does not gather hair or dirt. Separable to facilitate cleaning. After cleaning, assemble the two parts by screwing them together tightly.

Drains for housing and commercial applications with universal lower part and range of mounting sets

Shower drains for tiled and vinyl floors
square, circular or linear

bimready
files at bimstore.co.uk

Applications

For tiled and vinyl floors in:

- Private housing bathrooms
- Showers in apartments, hotels, hospitals, fitness centres

Details

- Same lower parts for all types of flooring, combinable with all mounting sets
- Square, circular or linear frame
- Brushed grain finish
- Low frame height
- Grate with starlock screw-system
- Stainless steel AISI304/EN 1.4301 or AISI316L/EN 1.4404

Variants

- Side inlets Ø32/40 mm
- Vertical or horizontal outlet
- Flange for liquid or sheet membrane
- Adjustable height, rotation and tilt

Options

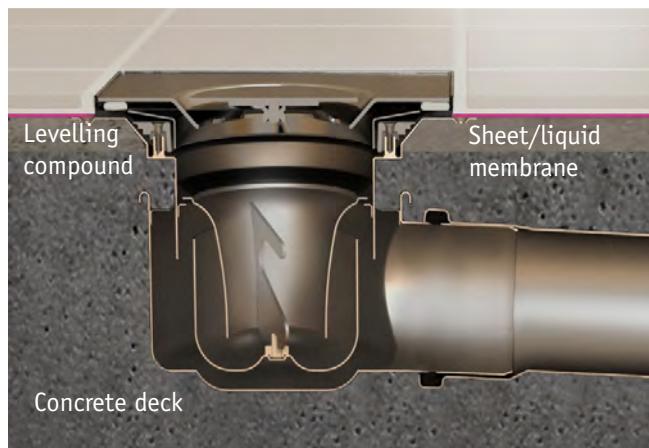

- Removable water trap
- Design gratings in 4 shapes and numerous designs

Series

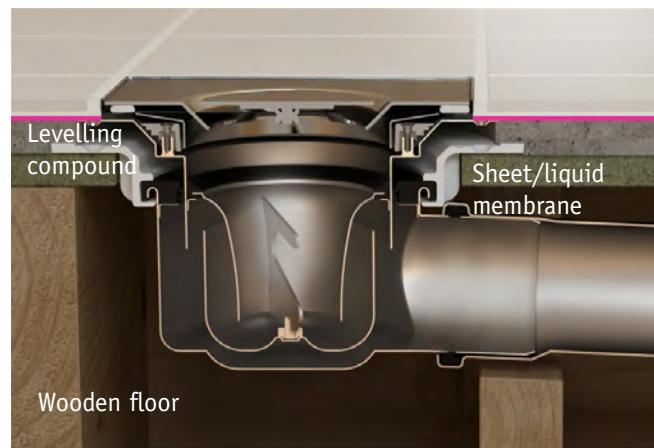

- Series 200 for vinyl floors
- Series 300 with liquid or sheet membrane flange for concrete and tiled floors

Installation examples

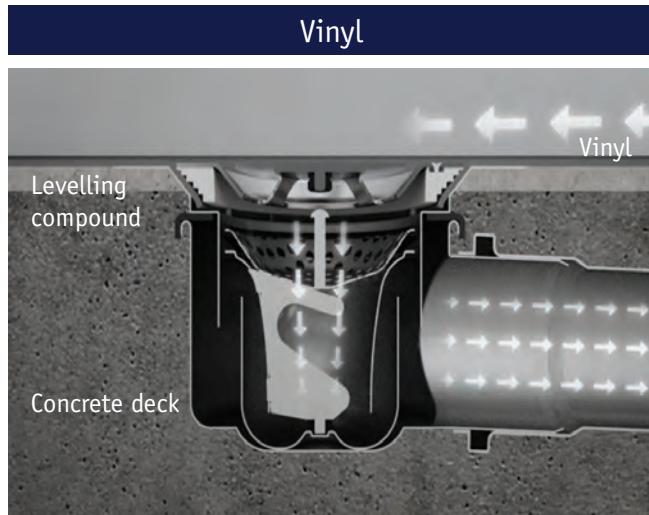

Concrete and tiles with sheet or liquid membrane

Concrete and tiles with sheet or liquid membrane

Vinyl

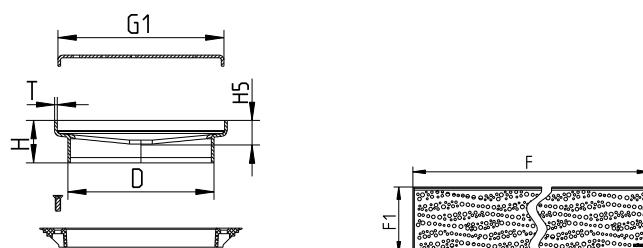

Two-part removable water trap

Due to its design the water trap has unique self-cleansing properties, and the slanted handle does not gather hair or dirt. Separable to facilitate cleaning. After cleaning, assemble the two parts by screwing them together tightly.

383.200.050	5705499133288	50	110	Ø222	86	58	113

LOWER PART MULTI, LOW MODEL TYPE 383

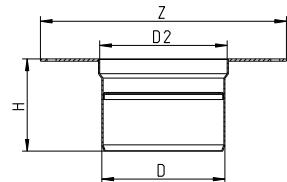

FOR MOUNTING SET, WITH REMOVABLE WATER TRAP

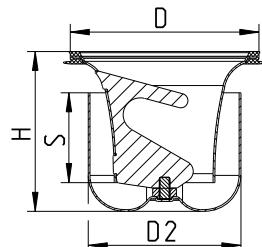

Type no.	EAN no.	D	D1	Z	H	H1	S	W1
383.200.050 V	5705499131796	50	110	Ø222	86	58	50	113

LOWER PART MULTI TYPE 110

FOR MOUNTING SET, WITH LIQUID MEMBRANE FLANGE

Type no.	EAN no.	D	Z	H	D2
100.000.110	5705499135442	110	Ø220	83	114

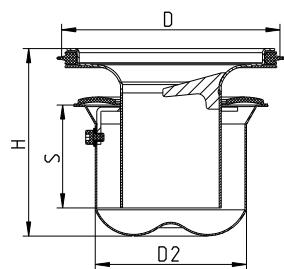

REMOVABLE TWO-PART WATER TRAP TYPE 502.050

Type no.	EAN no.	D	H	S	D2	Max Flow (l/s)
502.050.110	5705499124064	108	89	50	85	1.7

Accurate flow rate depending on type of drain and grating.

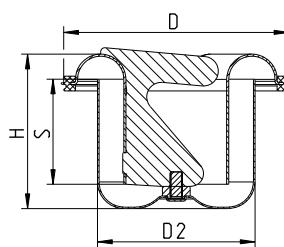

REMOVABLE WATER TRAP TYPE 503.001

PREVENTS SMELL

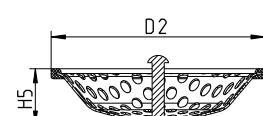

Type no.	EAN no.	D	H	S	D2	Max Flow (l/s)
503.001.110	5705499134728	108	93	51	75	1.3

Accurate flow rate depending on type of drain and grating.

REMOVABLE TWO-PART WATER TRAP, LOW MODEL TYPE 506

Type no.	EAN no.	D	H	S	D2	Max Flow (l/s)
506.050.110	5705499131864	108	74	50	75	0.6

Fits only into lower part MULTI type 382 and 383

FILTER BASKET FOR REMOVABLE TWO-PART WATER TRAP

Type no.	EAN no.	H5	D2
502.000.000 S	5705499124101	24	106

All dimensions in mm - Stainless Steel grade AISI 316L specify type no. with suffix S

Shower channels for housing and commercial applications

Height-adjustable
No permanent connection between wall and floor

bimready
files at bimstore.co.uk

Applications

For tiled and vinyl flooring in:

- Private housing bathrooms
- Toilets and showers in hotels, hospitals, fitness centres, etc.

Details

- **NEW: One model for concrete/tiles can be installed with outlet left or right and against wall(s) or away from walls**
- 20 mm frame width
- 50 mm end outlet
- All in stainless steel AISI 304/EN 1.4301, brush finish
- Adjustable frame height
- Secured grate providing rat stop

Options

- OD40 mm outlet part without water trap
- OD75 mm water trap - horizontal or 45°
- Side inlet connection
- 6 different design gratings

Variants

- 300-700-800-900-1000 mm standard lengths
- Up to 2000 mm length as customized channel

Series

- Series 178 for tiled floors without membrane
- Series 275 for vinyl floors
- Series 378 for tiled floors with liquid membrane
- Series 398 for tiled floors with sheet membrane

Product database at www.blucher.co.uk

Complete drains

Series 178 for tiled floor without membrane

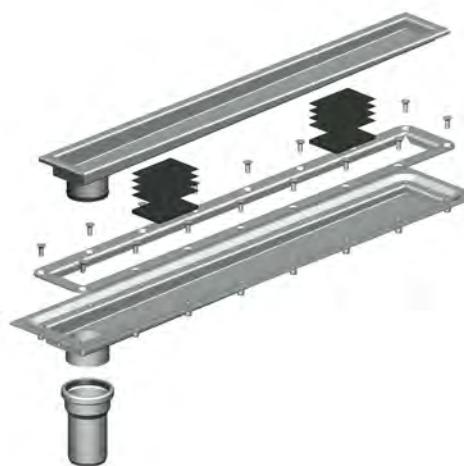

Series 275 for vinyl floor

Series 378 for tiled floor with liquid membrane

Series 398 for tiled floor with sheet membrane

Complete shower channel

Channel

Series 178 1-part channel or series 275, 378 and 398 adjustable 2-part shower channel. Standard OD50 mm end outlet included.

Series 378 and 398 come with rubber pads for height adjustment.

Series 378 comes with removable mounting brackets.

Grating

No standard grating is included - selected design grating to be ordered separately.

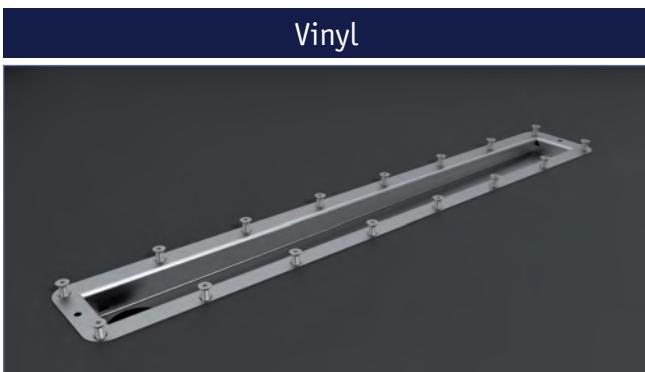

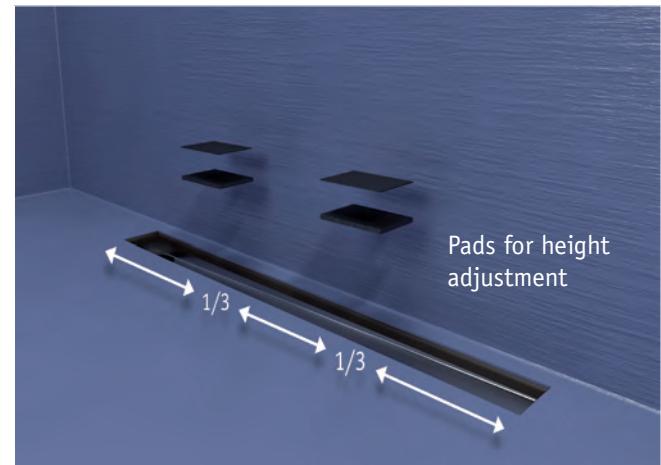

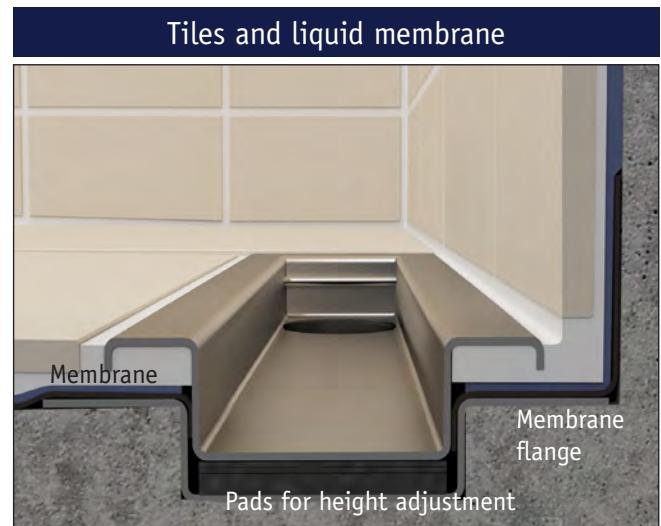

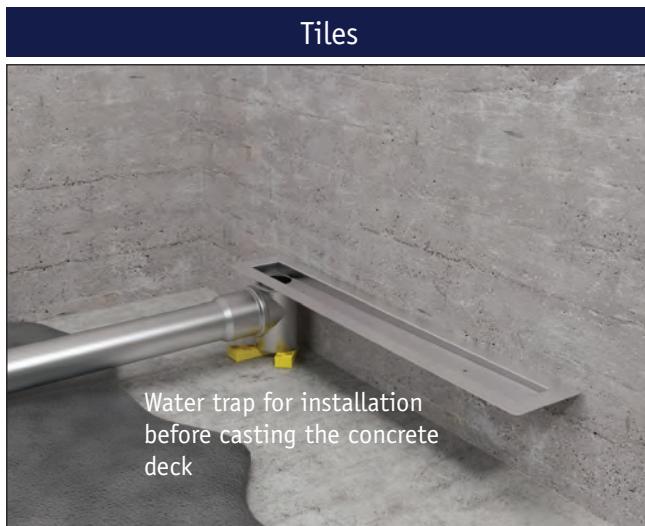

Water trap

Water trap with casing and stand pipe not included - to be ordered separately. To be fitted during installation of the channel, cannot be retro-fitted.

Side inlet OD40 mm is an accessory - to be ordered separately.

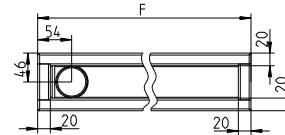

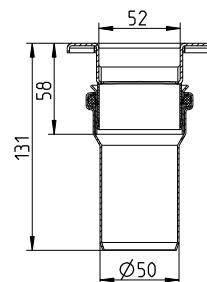

Installation examples

Floor drains

For concrete, tiled, epoxy or vinyl floors square or circular

Applications

For concrete, tiled, vinyl and epoxy flooring in:

- Industrial areas
- Commercial kitchens
- Supermarkets, restaurants, airports, etc.

Details

- Square or circular reinforced frame
- Flow capacities from 1,2 to 7,8 l/s, with "P" water trap type 525.090.160 S up to 28,5 l/s
- 20 mm frame height
- Gratings suitable for any load class
- Stainless steel AISI304/EN 1.4301 or AISI316L/EN 1.4404

Variants

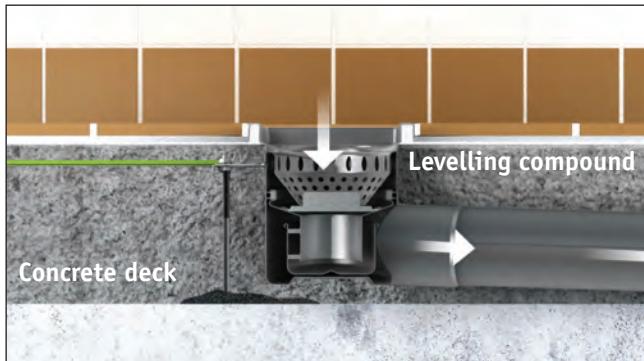

- Vertical or horizontal outlet
- For liquid membrane, sheet membrane or no membrane

Options

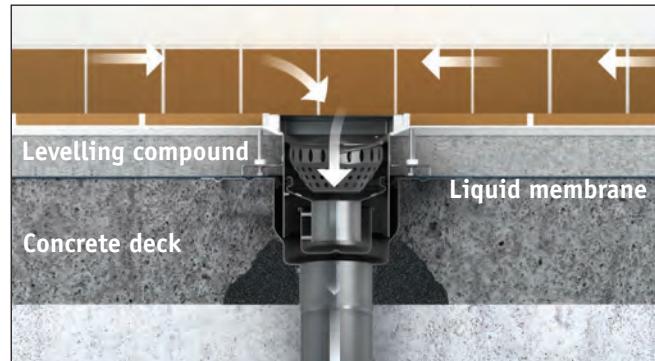

- Removable water trap
- Filter basket and sand bucket

Channels and kitchen channels for commercial and industrial applications

Standard or customised solutions

Hygienic design

Gratings for any purpose and load class

bimready

files at bimstore.co.uk

Applications

For concrete, tiled, vinyl and epoxy flooring in:

- Industrial areas
- Commercial kitchens

Details

- Standard lengths 1 - 6 m (slot channels up to 12 m)
- Longitudinal and cross fall
- Several standard widths
- 2 mm material thickness
- 20 mm frame width
- Anchor tangs
- Gratings for weight loads from 250 to 12000 kg
- Combinable with BLÜCHER® Drain Industrial accessories
- Stainless steel AISI304/EN 1.4301

Variants

- Outlet placed in end or center
- With or without outlet box
- With or without membrane flange

Options

- Removable water trap or P-trap
- Filter basket and sand bucket

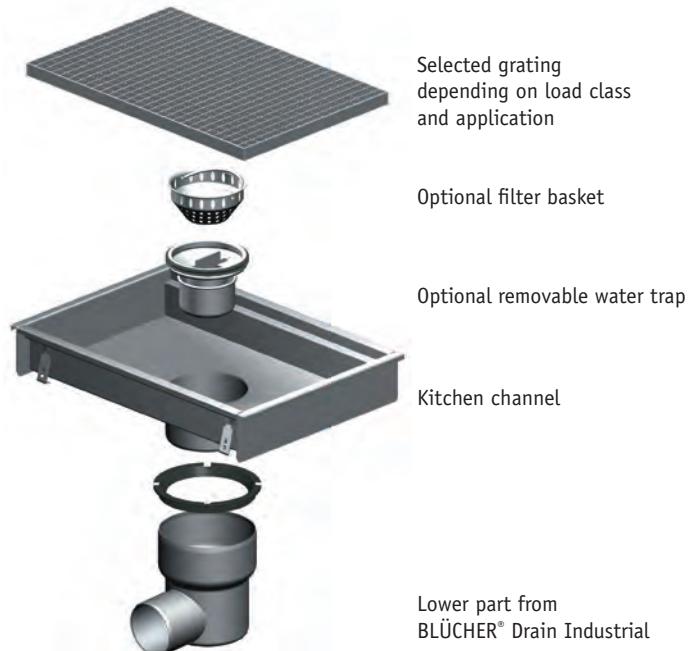

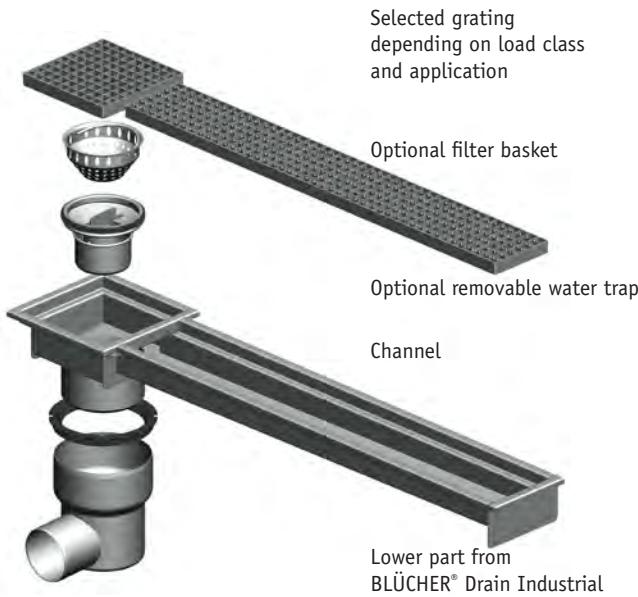

Extras

- Reinforced frames for heavy weight loads
- Stabiliser angle and adjustable legs
- Protective strip and grating lock device

Specialised in customised channels

Product database at www.blucher.co.uk

Complete channels and kitchen channels

Standard channel range or custom solutions

Standard channel range

The BLÜCHER® standard channel range comprises drainage channels for all common applications and for all common floor types, i.e. for concrete/tiled/resin floors or for vinyl floors.

Selecting a channel from the standard range is easy: Use the tables to identify type number for the channel to be selected. Then select grating, lower part and accessories, using the diagrams.

Most standard channels can be supplied from stock with short lead times.

Options and extras

Stabiliser angles, adjustable legs, edge infill, etc. are among the options available for the standard channel range.

Custom solutions

In addition to the BLÜCHER® standard channel range, BLÜCHER also offers purpose-made channels on request to ensure that all drainage requirements can be satisfied, for instance:

- Channels with corners
- Channels with T-pieces
- Channels in customized lengths
- Channels and gratings in customized widths
- Channels in customized designs
- Channels for other types of flooring
- Channels in acid-resistant stainless steel grade AISI 316L for demanding environments
- Other types of gratings

Our drainage know-how enables us to provide extensive engineering assistance.

For further information please contact our sales department.

Channel range overview

Type 670 **Channel for concrete, tiled and resin floors**

Width: 150, 200, 300 or 400 mm

Typical application: Shower areas, kitchens, food and beverage production, chemical plants, abattoirs

**Type 671** **Channel with outlet box for concrete, tiled and resin floors**

Width: 150 mm

Typical application: Kitchens, food and beverage production, chemical plants, abattoirs

**Type 673** **20 mm slot channel with outlet box for concrete, tiled and resin floors**

Width: 20 mm aperture

Grating: For outlet box only

Typical application: Food and beverage production, chemical plants, breakwaters, abattoirs

**Type 676** **HygienicPro® channel for concrete, tiled and resin floors**

Width: 150 mm

Typical application: Hygienically demanding areas in food and beverage production

**Type 674** **Channel with 50 mm liquid membrane flange for concrete, tiled and resin floors**

Width: 150, 200, 300 or 400 mm

Typical application: Shower areas, kitchens, food and beverage production, chemical plants, abattoirs, dairies

Channel range overview

Type 677 **8 mm slot channel with 50 mm liquid membrane flange for concrete, tiled and resin floors**

Width: 8 mm aperture

Typical application: Shower areas, swimming pools, breakwaters

Type 678 **Channel with 84 mm liquid membrane flange for concrete, tiled and resin floors**

Width: 150 mm

Typical application: Shower areas, kitchens, food and beverage production, chemical plants, abattoirs, dairies

Type 672 **Channel for vinyl floors**

Width: 150, 200, 300 or 400 mm

Typical application: Shower areas, kitchens

Dimensions in gray cells are height from frame top to centre of outlet

HygienicPro®

Matching the strictest hygiene requirements

The HygienicPro® range:

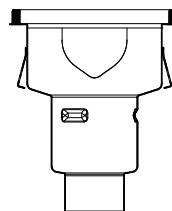

- Point drains or linear drains with center or end outlet
- Channel lengths 1 - 10 metres
- Channel lengths connected to outlet box at different angles
- Outlet box and filter basket in three sizes
- Vertical or horizontal outlet

With a product range consisting of modular components with numerous possible combinations complemented by project-designed bespoke products, BLÜCHER provides customer specific and hygienic drainage solutions to match any drainage project.

TYPE 676

HygienicPro® Channel for concrete, tiled or resin floors

Width (grate location): 150 mm
Length (grate location): 1 - 10 metres
Outlet: OD110 mm
Outlet position: End or center

Installation examples

Linear drainage in hygienically demanding areas in the food and beverage industry, typically fitted with HygienicPro® grating

HygienicPro® are high-capacity channels that provide efficient flow and a high level of self-cleaning. They are easy to clean and prevent bacterial growth while limiting also the water volumes and the production time necessary for operating and cleaning the drainage system.

The outlet can be connected to a "P" water trap or a removable water trap and a filter basket.

Production downtime reduced

Thanks to high-capacity filter basket

Efficient flow towards outlet

New channel geometry keeps channels empty and clean during minimal water flow periods

Hygienic floor concept

Due to rounded corners providing durable floor joints

Easy and efficient floor cleaning

Grating with open sides, rounded corners and no cavities prevents waste and residues from depositing on the grating surface

High-flow water trap

Increases flow rate and improves hygiene by emptying the channel/drain faster. Separable for easy cleaning

Heavy-duty frame for secure bonding to floor

Improving hygiene and durability with frame edge infill and special anchor tangs, minimizing risk of deformation and flooring cracks

Neat and hygienic bonding

Between floor and drain owing to heavy-duty frame

See grating specifications for non-skid levels and load classes.

Accessories

Accessories and outlet configurations available for channel type 676 HygienicPro®:

Kitchen Channel Range Overview

Type 660

Width (grate location):

Length (grate location):

Typical applications:

Kitchen channel for concrete, tiled and resin floors

300, 400, 500 or 600 mm

400, 500, 800, 900 or 1000 mm

Kitchens, food and beverage production, chemical plants, abattoirs

Type 664

Width (grate location):

Length (grate location):

Typical applications:

Kitchen channel with 50 mm liquid membrane flange for concrete, tiled and resin floors

300, 400, 500 or 600 mm

400, 500, 800, 900 or 1000 mm

Kitchens, food and beverage production, chemical plants, abattoirs, dairies

Type 668

Width (grate location):

Length (grate location):

Typical applications:

Kitchen channel with 100 mm liquid membrane flange for concrete, tiled and resin floors

200, 300, 400, 500 or 600 mm

200, 300, 400, 500, 600, 800, 900 or 1000 mm

Kitchens, food and beverage production, chemical plants, abattoirs, dairies

Type 662

Width (grate location):

Length (grate location):

Typical applications:

Kitchen channel for vinyl floors

300, 400, 500 or 600 mm

400, 500, 800, 900 or 1000 mm

VINYL HOLE PUNCHING TOOL

Type no.	EAN no.
001.200.002	5705499128239

Standard variants and options

For all channel types a range of variants and options as described below can be specified:

Variants

A: Stabilizer angle

B: Anchor tangs

Stabilizer angle and anchor tangs can be fitted with adjustable legs (type no. 670.000.001) to be able to adjust the position of the channel before embedding in concrete.

Options

B: Edge infill

C: Protective strip

Anchoring the channel firmly into the concrete is particularly important for channels that will be exposed to heavy weight loads and large temperature variations.

Stabilizer angle (variant A) is point welded to the channel, thus supporting the channel and creating a bond between channel and concrete in the entire length of the channel. Adjustable legs and anchor tangs can be fitted in the stabilizer angle. The stabilizer angle is recommended for all applications with heavy weight load.

Anchor tangs (variant B) are welded to the channel side at 500 mm distance. Before embedding the channel in concrete, the anchor tangs are bent out. Adjustable legs can be fitted into the holes of the anchor tangs. Anchor tangs are suitable for applications without high weight loads or thermal stress, for instance in shower rooms or light industrial applications.

Edge infill (option B) – For optimum channel strength it is important that the channel is properly embedded in concrete. This is particularly necessary with regards to the underside of the channel edge profile. Whilst this can be filled on site it is also possible to have the filling carried out under factory conditions as part of the production process.

In addition to providing greater rigidity to the channel, the edge infill also eliminates voids and any potential for bacterial growth.

Protective strip (option C) The edge profile can be supplied with a protective strip which adheres lightly and is easily removed. This is to protect the edge profile during installation leaving a perfect visible edge once the installation is complete.

Option A designates no edge infill or protective strip, and Option D designates edge infill and protective strip combined.

BLÜCHER offers custom-made channels for all applications. Our team of technical engineers holds over 50 years of know-how and experience in designing channels. For more information please contact our technical sales department.

Selected references

Tall buildings, food and beverage industry , hospitals, prisons, sport and leisure and the pharmaceutical industry are among the customers that benefit from BLÜCHER stainless steel drainage systems.

Commercial

Hope Hospital, Queen Elizabeth University Hospital, The Sick Childrens Hospital, Princess Alexandra Hospital, St. James Hospital, University College London Hospital, Huddersfield Royal Infirmary, Fitness First, Bannatynes Leisure Centre, Rhyd Water Park, Alpamere Water Park, David Lloyd, Virgin Active, Hilton Hotels, McDonalds, Morrisons, Tesco, Lidl, Asda, Heathrow Airport Terminal 2 and Terminal 5 , Gatwick Airport, Manchester Airport Terminal 2, Dublin International, Liverpool Airport, HMP Berwyn, HMP Lyndhome, HMP Addiewell, HMP Forest Bank, York Racecourse, Ascot Racecourse, The Shard, Owen Street, Northern Line Extension, Blackfriars Station, London Bridge Station, Twickenham Station, New Street Station, Docklands Light Railway, CrossRail, Central St Giles Station, 22 Bishops Gate, Plaza Corner, 1 Hyde Park, Chelsea Barracks, Bridgewater Place, Trafford Centre, Golden Square Shopping Centre, Silverburn Shopping Centre, Leadenhall, Bullring, Galway Garda Regional HQ, Cannon Place, Manchester City Training Academy, Battersea Dogs Home, Southbank Place, Grosvenor House Apartments, Rathbone Square, Bloomberg Place, Smithfield Meat Market, The Francis Crick Building, First Direct Arena, Manchester City Football Stadium, Leeds University, Manchester University, Reading University.
