

# Coursing Units

Coursing units are produced from the same material and are suitable for all the same applications as conventional size Celcon Blocks, allowing consistency within the building fabric.

They are suitable for use both externally and internally in load-bearing and non load-bearing situations.

Load-bearing walls should not be constructed of Coursing Units as the only masonry unit.

## Applications

- Protect against cold bridging
- Infill above doors and windows
- Coursing at floor and ceiling level
- Making up between joists
