Installation Advice

- 1203 should be fitted with the slotted end to accept the airbrick. 1203 sleeves can also be slotted together to form longer sections if required
- 1204 fits externally over the upper and lower parts of the ventilator, units can be multi stacked for greater height
- 1205 has a 'push-fit' opening for the drainage pipe. The vermin grille of the ventilator can be left in position. For fitting to drainage pipe a coupling will be required
- 1206 fits over the lower rear opening of the ventilator. The vermin grille must be removed to allow this & replaced at the other end of the extension sleeve. 1206s can be slotted together to form longer sections if required.
- To improve joins between the telescopic underfloor ventilator and an accessory, seal using insulating tape or duct tape
- When incorporating with a gas barrier system and adjusted to the required height, the joining sections should be sealed with proprietary tape
