

DELTA MEMBRANE SYSTEMS LTD

895 CHAMBER - FOUL AND GREY WATER

The Delta 895 chambers are designed for foul and grey water collection.

The Delta V3 Foul Packaged Pump Stations are suitable for collecting wastewater from the kitchens, bathrooms and/or utility rooms and discharging this into the mains drainage system.

The Delta Foul V3 is an effective way of moving foul/grey water to where it needs to be.

This specially designed chamber offers a large storage dimension, not forgetting the all-important cost savings – less excavation costs, less labour costs, less requirement for concrete/steel (when housed).

Recommended RC Sump Dimension - 1000mm x 1000mm x 1000mm

Delta 895 Chamber size - 895mm x 660mm (750mm spigot to spigot)
