

## Sustainable moveable wall solution

**Style Partitions is the first ever UK supplier of EPD certified moveable walls in accordance with ISO 14025 and EN15804**

The EPD (Environmental Product Declaration), which applies to DORMA's Variflex, and Varitrans products, is the pinnacle of product sustainability.

It is of importance to anyone seeking sustainable solutions for:

- **BREEAM** : BRE Environmental Assessment Method
- **LEED** : Leadership in Energy and Environmental Design
- **SKA** : Measuring the environmental effects of an office fit-out

An EPD communicates the environmental performance of a product. For each product a life cycle analysis (LCA) is carried out in accordance with ISO 14040, and by having an EPD means architects and contractors can participate in tenders involving sustainable building certification procedures.

The EPD covers a number of key criteria including:

- **Global warming potential (GWP)**
- **Cumulative energy demand (CED)** arising from each product's manufacture
- **Total weight of the production waste recycled at the pre-consumer stage**
- **Total weight of the production waste recycled at the end of the product's life**

Skyfold, Style's vertically rising acoustic partitioning wall system, is also constructed mainly from recycled materials, which offers tremendous advantages and opportunities to earn points required for LEED certification.

Style is also accredited by Bureau Veritas to a UKAS standard for ISO 14001:2004 Environmental Management System, positioning the company and its products at the forefront of sustainability in the moveable walls sector.
