WYKAMOL WATERPROOFING SOLUTIONS

GLOBAL WARMING

The use of non biodegradable plastics, and the embracing of green renewable energy are the biggest challenges and opportunities facing the planet.

Recycling has very quickly become standard practice for all households However, we must do more, and it will intensify.

Micro plastics are omni present within our oceans. Manchester University discovered up to 1.9 million pieces per square metre! The impact of plastics within our oceans can be devastating to all marine life.

The only national UK manufacturer of cavity drain membranes using solar power and membrane offcut collection service to help save our planet

WHAT DOES THIS MEAN?

And what are Wykamol doing to change the established norms in the waterproofing and preservation market?

- Nationwide membrane offcut collection service.
- All virgin material from ANY manufacturer collected.
- Bags supplied FOC.
- No cost for collection (we anticipate 200kg per bag).
- All materials collected will be recycled.
- You click, we collect!

For every 200kg of HDPE collected we will be saving enough energy to make 32,000 cups of tea, or drive 3496 miles in a large 2L diesel vehicle.

SOLAR ENERGY

WYKAMOL are installing almost 400 solar PV panels across their two production sites, saving over 62 tonnes of CO_2 emissions per annum, but what does this mean in plain measurable terms?

- Enough energy saved to make 1,170,000 cups of tea, that's 22,500 cups per week!

- Enough energy saved to drive 189,000 miles in a large 2L diesel vehicle, that's 3600 miles per week!

- Enough energy saved per annum to stop the melting of 186m^2 of Artic ice, that by the way is about 2.5m in thickness!

We cannot allow the natural habitat of our wildlife to be destroyed by global warming.

No one in the UK waterproofing and preservation market is doing more than Wykamol to embrace green energy, and make a real difference to our planet.

Help save the environment - try wykamol on your next project.
