

ACO
BUILDING DRAINAGE

STAINLESS STEEL
PIPE

Make the connection

Make the connection

ACO Building Drainage manufactures high quality drainage systems which deliver the level of performance you would expect from one of the world's leading commercial drainage specialists. Known for our class-leading gully and channel systems, we also offer a comprehensive pipe range of the same high quality.

Make the Connection between ACO Building Drainage and stainless steel pipe, and you get access to pipe products in sizes ranging from 50mm to 250mm, more than 2,000 accessories, stock levels which mean we can normally deliver immediately upon receipt of order and market-leading customer service. That's why we're inviting you to 'Make the Connection' between pipe and ACO Building Drainage.

Manufactured to the very highest standards at our UK production site in Bedford and our state-of-the-art pipe plant in the Czech Republic.

Optimal Hygiene

Reduced incidence of risk from bacteria and microbial growth due to the products inherent cleanability.

Aesthetics

A modern design finish that looks good in both traditional and contemporary environments.

Service & Support

The support of our team of in-house design and specification experts.

PIPE SOLUTIONS

Whether you're a public health engineer, an M&E contractor, an architect or a distributor, the ACO PIPE® range comprises market-leading products and comes complete with excellent customer service including access to our own in-house design and specification team.

As the modern alternative to more traditional materials, stainless steel pipe systems also provide a wider range of features and benefits for key groups within the construction sector.

Public Health Engineers
Superior hygienic performance

Architects
Aesthetic qualities

M&E Contractors
Ease of installation

Distributors
Complete and comprehensive system

PIPE STEEL

Key benefits include:

A Comprehensive & Complete System

Full compatibility with other ACO gully and channel systems as well as those offered by other manufacturers.

Easy Installation

Lower weight than traditional materials for ease of installation, minimal use of handling equipment and reduced risk to installer health and safety when working on-site at height or in confined spaces.

Performance & Durability

Superior joint integrity, fully EN1124 compliant and an estimated product life of at least 50 years.

PIPE SECTORS

Suitable for a wide range of applications including commercial offices, transport infrastructure projects, education, food production facilities and even ship building, ACO PIPE® is used across every part of the construction industry.

It's particularly relevant to the food processing and healthcare industries where hygiene is a specific performance requirement.

PIPE SYSTEMS

ACO PIPE® products are fully compatible with other ACO stainless steel systems including our class-leading Modular 125 system, gullies, engineered solutions and kitchen channel range. So the end user always gets the best, high performance, long term solution.
