

**Harcon Services Ltd are a leading specialist in the design, supply, installation and commissioning of Access Ladder systems.**

With our in-house design service and technical support team we can offer solutions to your height safety and access requirements.

Each system is designed specifically to suit your site requirements.

Your requirements for access, aesthetics and safety are all taken into account when designing the system, with material options in Aluminium and Galvanised Steel, and safety options including traditional hoops, vertical cable system and vertical track systems.

Where your requirements are more specific we can also supply specialist types of access ladders that not only are less obvious to the eye to enhance the localised appearance but also incorporate a vertical fall device in the centre of the ladder (spine).

All our ladder systems can be integrated into safety barrier systems and gates to ensure 100% safety for your workers.

Manufactured from high grade aluminium our aluminium range is aesthetic and maintenance free.

Fitted with either a hoop system or a vertical fall arrest system it offers high levels of safety and comfort.

Where your environment requires your system to be visible and not detract from the appearance of your building our aluminium ladder range is the ideal solution. Manufactured from high grade materials our aluminium range is aesthetic and maintenance free.

The excellent corrosion resistance of aluminium is the result of its special 'skin' – a protective film of inert aluminium oxide which thickens on exposure to air and contact with aqueous solutions. The adherent film reforms as soon as the surface is cut or scratched, and even more rapidly in high temperatures. The build-up of this particular barrier makes aluminium a good choice in corrosive environments. Anodised ladders are available at extra cost for enhanced corrosion protection in extreme applications.

Aluminium is non-toxic, making it ideal for the food industry, vessel entry and other environments, while its non-spark nature makes it ideal for confined spaces and high-explosion-risk environments.

Whatever your buildings structure Harcon Services can provide a solution for fixing that compliments the existing structure, whether the structure is steel, masonry, concrete or cladding.

## Key Features & Benefits

- Non-toxic – ideal for the food industry
- Non-spark – ideal for high-explosive-risk areas
- Non-corrosive – ideal for corrosive environments
- Quality finish – highly aesthetic

## Optional Extras

- Hoop Systems - Where the system is over 2m in height fall protection must be provided. A hoop system is the basic entry level of safety on ladders.
- Fall Protection Systems - Offering full safety from falls a vertical lifeline is the best option for ladder safety.
- Platforms - Where a step over onto a roof is required we can provide a platform with hand rails to ensure that the egress is as safe as possible.

## Technical Information

- Material Aluminium
- Fixing To suit site requirements (bolt / weld / rivet / clamp)
- Conformity BS 4211:2005
