**KÖSTER
KB-FLEX 200**

Successful waterproofing of pipe and cable penetrations is a challenge for every applicator. Due to different and incompatible materials (concrete, plastic cables, metal pipes, etc.), waterproofing can become very difficult.

In order to prevent leakages reliably, KÖSTER offers an innovative solution - KÖSTER KB-Flex 200:

- durable plastic sealing compound
- compatible to a large range of different materials
- permanently malleable
- one-component product
- easy to handle and install
- application directly from the cartridge
- safe and reliable

**Immediate Waterproofing
of Pipe and Cable
Penetrations**

PRODUCT FEATURES

KÖSTER KB-Flex 200 is an innovative waterproofing system for cable and pipe penetrations. It is suitable for waterproofing against ground moisture and pressurized water.

KÖSTER KB-Flex 200 is a one-component material and easy to use. It allows a reliable seal also with many different materials. KÖSTER KB-Flex 200 does not shrink or dry out and thus remains permanently plastic. Because of this feature, cables can be installed into the finished waterproofing material even at a later date if necessary.

KÖSTER KB-Flex 200 is impermeable against water and vapour.

APPLICATION

1. A leaking ...

2. ... pipe is sealed...

3. ... with KÖSTER
KB-Flex 200 ...

4. ... immediately,
easily ...

5. ... comfortably ...

6. ... and permanently.

KÖSTER KB-Flex 200 can be applied on all mineral construction materials, e.g. concrete, masonry, mortar and plaster. It will also bond to ceramics and plastics such as PVC, polyethylene and polypropylene. The substrate can be dry, moist or wet. It must be sound, free of grease, tar and oil as well as dirt and other debris.

KÖSTER KB-Flex 200 can be installed with the special caulking gun from the KÖSTER accessories program.

Follow our technical guidelines.
