

Underground Refuse Systems

# HYDRAULIC ICEBERG

Waste collection - the elegant way

**SULO**

# HYDRAULIC ICEBERG

## The Underground Refuse System

The hydraulic lift version of the ICEBERG underground refuse systems allows waste or recycled material to be collected using a 1100L, 4 wheeled bin and emptied using a standard 'comb or side lift' vehicle

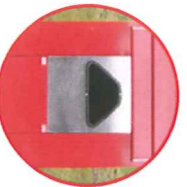

This system is raised using either a hydraulic connection from the refuse vehicle or an 110V / 240V supply. A control unit is used for the 110V / 240V system, either wall mounted or in a vandal resistant steel column

- BENEFITS:**
- Traditional emptying method
  - Powered via vehicle or local source
  - Aesthetically pleasing
  - Reduced noise levels
  - Low maintenance
  - Easy to install
  - Small footprint
  - High quality materials
  - Safe operating
  - Reduce weekly collections

**OPTIONS:**

- Power (vehicle or 110V / 240V)
- Columns (shape, colour etc)
- Access controls
- Apertures (refuse, bottles, paper etc)
- GPRS Fill level indicator system
- Sound proofing
- Platform finish
