COMMERCIAL & INDUSTRIAL DRAINAGE

We recognise that when you're looking for a drainage system for an industrial or commercial facility, the drainage you choose needs to complement the building's design and look as good as it performs.

Manufactured from fully pickle passivated stainless steel, our drainage systems combine aesthetic appeal with high performance, corrosion resistance and durability. The range is complemented with a comprehensive range of pipe products and accessories. We also employ an in-house design team who use their expertise to provide technical support at every stage of your project.

APPLICATIONS

Our drainage is used across a wide range of commercial and industrial applications including:

- ▶ manufacturing and industrial sites
- ▶ logistics facilities
- ▶ offices
- ▶ supermarkets
- ▶ shopping malls
