

DRAINAGE FOR INFRASTRUCTURE PROJECTS

Good drainage is fundamental to the success of the infrastructure within our towns and cities. In addition to our standard range of drainage products, our in-house technical design team creates engineered drainage solutions to meet the specific requirements of individual infrastructure projects.

By combining high levels of product performance, corrosion resistance and durability with market-leading technical design and support, our drainage is a popular choice for a wide variety of infrastructure projects.

APPLICATIONS

Our drainage is used in a variety of infrastructure applications including:

- ▶ railway stations
- ▶ bus terminals
- ▶ airports
- ▶ bridges
- ▶ car parks
- ▶ prisons

PRODUCT RANGES

- Modular 125 channel
- Freedeck channel
- Deckline channel
- Stainless Steel Gullies
- Total Flow Gullies
- Roof Outlets
- ACO Pipe
- GMX Pipe
- Access Covers
- Engineered Solutions

INTERNAL & EXTERNAL DRAINAGE

Our product portfolio offers a wide variety of drainage solutions for both internal and external applications, and is suitable for use with every building type ranging from historic landmarks to modern office complexes and city centre infrastructure. It can be found in and around some of the most prestigious buildings in the country.

Combining high performance with discrete, aesthetically appealing design, our drainage helps to ensure the urban landscape is not only well drained but that is also complements the internal design of the buildings situated within it.

WHAT ELSE DO WE DO?

In addition to providing high performance drainage products, we also offer a comprehensive range of services to support you throughout the life of your project and, via our in-house technical design team, can develop engineered solutions which are tailored to meet specific requirements.
