

# ENGLISH CHEESECAKE COMPANY

[www.acobd.co.uk](http://www.acobd.co.uk)

## THE PROJECT

Founded in the late 1980s by two people with a passion for all things cake-shaped, the English Cheesecake Company manufactures a full range of desserts for companies, consumers and the foodservice sector. In 2014, the company decided to move from its original headquarters to a new site that would be purpose built for its needs and which would allow it to gain British Retail Consortium (BRC) accreditation – an essential requirement for its pending expansion into the supermarket, airline and mainstream retail markets.

## THE BRIEF

ACO Building Drainage was approached by architects Arctica and contractors Chalcroft to design a hygienic drainage solution for the new manufacturing facility.

## THE SOLUTION

Channel and gullies from ACO's HygieneFirst range were specified by Arctica because of their hygienic design which incorporates the best practice recommendations of the European Hygienic Engineering and Design Group (EHEDG). The Chalcroft team were also keen to work with ACO Building Drainage based on their previous experience of working with the company and its product range.

Edward Getley of Chalcroft comments: *"ACO were the natural choice for us. We have worked with their team on numerous occasions and are very happy with the quality of their products and, when required, the technical support provided. The hygienic design of ACO's drainage solution was also critical to ACO's appointment. Arctica, who specialise in food factory design, were impressed by the hygienic design of ACO's range and felt that these products were by far the best solution for the project."*

ACO. The future of drainage

## DRAINAGE FOR FOOD & DRINK MANUFACTURING

Drainage is critical to the success of any food and drink manufacturing facility whether you're an international brewer or a manufacturer of ready meals for a major supermarket. It impacts upon hygienic performance, sustainability and profitability, and ultimately upon public health.

We design and manufacture drainage products that deliver the ultimate hygienic performance and our HygieneFirst philosophy underpins our entire approach to product development.

This includes a commitment to making ongoing and significant investments in R&D, working in partnership with every part of the industry to improve our own knowledge and adhering to the very highest manufacturing and design standards. We were also the first drainage company to become members of the European Hygienic Engineering and Design Group (EHEDG).

Our products are used by a wide variety of food and drink businesses including breweries, dairies, meat and fish processors, and cheese makers in applications including high risk areas, food preparation areas, delivery areas and refrigeration facilities.

## IN WHICH SECTORS DO WE OPERATE?

ACO Building Drainage specialises in the development and manufacture of high performance drainage systems for a wide range of sectors

Food Processing

Commercial kitchens

Hotels

Infrastructure

Commercial & Industrial

Healthcare

Education

Sport & Leisure

Residential
