- ▲ EASY TO CLEAN LIGHT CREAM COLOUR
- ▲ SAFE AND COMFORTABLE CHANGING SURFACE
- ▲ EASY OPENING AND CLOSING WITH GAS STRUT
- ▲ BUILT-IN LINER/TOWEL DISPENSERS AND BAG HOOKS
- ▲ 20 KG LOAD CAPACITY CONFORMS TO EU STANDARD

Description

The horizontal baby changing unit is designed for use in commercial, recreational and institutional applications. The contemporary space saving design with no sharp edges or corners and subtle light cream colour provides a safe, comfortable and hygienic place to change babies away from benches, vanity tops and floors.

Construction

The horizontal baby changing unit is manufactured from 100% high-density non-porous polyethylene with an antimicrobial agent. The light cream colour unit is easy to clean and resistant to bacterial growth.

The horizontal style is ideal for confined areas or narrow passageways, extending only 585 mm from the wall when open. The large concave changing bed folds away when not in use to a depth of only 107 mm.

The unit has a metal hinge design providing high strength and stability. A concealed gas strut mechanism allows easy opening and closing with one hand. The bed has two integral heavy duty bag hooks and is fitted with strong adjustable safety straps with a snap-lock fitting. Incorporated into the back panel of the baby changing unit are two storage boxes/dispensers which can be used for wipes, liners, paper towels etc. The horizontal baby changing unit is can be easily positioned to allow wheelchair access.

Standards

The horizontal baby changing unit complies with the European Standard EN 1221:2008+A1:2003.
