STAINLESS STEEL DRAINAGE SOLUTIONS

BLUCHER has been manufacturing stainless steel drainage systems since 1965. ISO 9001 compliant, BLUCHER products have been used in some of the most prestigious projects around the globe.

Manufacturing drainage products in stainless steel comes with a variety of inherent benefits. BLUCHER drainage products are resistant to corrosion, hygienic, need minimal maintenance, and require no protective coatings. This means that our drainage products are modern and clean looking and can last the test of rigorous use and time. Perfect for municipal buildings such as schools.

Schooling is about investing in the future and so sustainable materials are important when it comes to building for education. As well as being 100% recyclable, BLUCHER drainage products are manufactured from 70% recycled material using state of the art production facilities ensuring our drainage systems are as sustainable as possible. For a more detailed look at the sustainability of BLUCHER drainage systems please see our Sustainability brochure which is available to download from our website.

Kitchens

There are many BLUCHER products which are ideally suited to the kitchen area. Whilst stainless steel has become synonymous with kitchen sinks, it is also ideal for kitchen drainage as a whole.

BLUCHER KITCHEN DRAINS - Wide channels with built in falls which are ideal for brat pans and tilting kettles. A range of sizes and a variety of grates are available as standard. Benefits include a removable filter and trap for easy cleaning.

BLUCHER INDUSTRIAL DRAINS- A range of heavy duty drains for all floor types. Hygienic cast stainless steel grates are available within our extensive range of grate options. Traps and baskets are removable, allowing for easy cleaning and rodding.

BLUCHER EuroPipe POLISHED - A great alternative to chromed copper. Polished EuroPipe is mechanically polished so it doesn't flake or bubble and maintains its excellent appearance. It is still a push fit system and retains all the natural benefits of stainless steel. The real benefits come with the cost when compared to compression chromed copper pipe, and the streamlined appearance of EuroPipe because there are no bulky joints.

BLUCHER Grease separators - A range of standard size grease separators for installation either above or below ground. The BLUCHER grease separators have been designed to work with dosing units (also supplied) which treat the separator with bacteria that digests the grease. This means little maintenance is required but, unlike direct dosing systems, allows for failsafe grease storage should the dosing be negated.

Pools, changingrooms

BLUCHER's first product was a shower grate, so we have over 40 years experience of drainage in shower applications, meaning our products are always leading the field in design and performance

BLUCHER CHANNELS - Channels manufactured with built in falls for all floor types. A range of widths and grates are available as standard. Benefits include removable filters and traps for easy cleaning and rodding. For showers and change rooms, our shower grate or wedgewire grates are perfect for barefoot use.

BLUCHER LIGHT DUTY DRAINS- A range of light duty drains, all with a brushgrain finish, for all floor types. Barefoot safe pedestrian grates are supplied as standard. Traps and baskets are removable allowing for easy cleaning and rodding.

BLUCHER NEW WATER TRAP. The only trap available on the market that meets the new BS EN 1253 standard and capable of flow rates up to 1.7l/s, well above the minimum requirement of 1.4l/s.

BLUCHER EuroPipe - The ideal alternative to un-environmentally friendly plastics and costly cast iron. Quick to install with its push fit joints, it is also strong and able to resist robust use.

Plant rooms

The BLUCHER Industrial range of stainless steel drainage solutions are designed specifically to cope in heavy duty applications.

BLUCHER ACCESS COVERS - Gas tight covers manufactured from stainless steel. For tiled or concrete floors, with an option for vinyl systems. The covers are manufactured with a tapered edge and come complete with magic keys which make for easy lifting after long periods of closure. Load class B is achieved when filled with suitable grade concrete.

BLUCHER INDUSTRIAL DRAINS- A range of heavy duty drains for all floor types. The non slip ladder grate is ideal for plant room applications. Traps and baskets are removable allowing for easy cleaning and rodding.

BLUCHER EuroPipe - With a wide range of pipe sizes from 50 - 250mm, and an extensive range of fittings, BLUCHER EuroPipe is ideal for use as a drainage pipework.

Toilets and wash rooms

In Denmark, the home of BLUCHER, the most common drains sold are installed in bathrooms, toilets and washrooms as they are aesthetically pleasing, cost effective, and long lasting.

BLUCHER LIGHT DUTY DRAINS- A range of light duty drains with a brushgrain finish. Barefoot safe pedestrian grates are supplied as standard, with a number of designs available to suit all applications. Traps and baskets are removable allowing for easy cleaning and rodding. All floor types are catered for making light duty drains an easy choice.

BLUCHER EuroPipe - A cost effective and environmentally friendly alternative to plastics and cast iron. Quick to install with its push fit joints, it can be supplied in its standard finish or can be polished. Included in the range are tubular and bottle traps which are ideal for fitting under basins and urinals.

External

BLUCHER products are hard wearing and keep their finish without the need for painting.

BLUCHER CHANNELS - Channels manufactured with built in falls for all floor types. The BLUCHER Wedgewire grate is heelsafe and can easily withstand general traffic, making it ideal for external areas. Add the option of screwlocked grate and a silt trap and the channel is perfect for external application.

BLUCHER EuroPipe - A great standard finish with an option for polishing to your required standard, along with excellent rigidity, and slim push fit joints, makes BLUCHER EuroPipe a modern and clean looking rainwater downpipe, to compliment the building design.

Recent projects:

St Aidens Academy , Darlington - Kitchen drains
Milton Keynes Academy - Light duty drains
Castle View Academy, Sunderland - Channels
Academy 360, Pennywell - Shower drains
Beaumont Leys School, Leicester - Channels
