

The AUTOPA Heavy Duty Warehouse Rail

The AUTOPA Heavy Duty Warehouse Rail is designed to protect vulnerable areas on busy industrial and commercial sites. BS 6399 compliant, it is ideal for protecting places and people from high impact collisions. Manufactured from mild steel and galvanised for longevity, it is suited for internal and external use.

The Heavy Duty Warehouse Rail is constructed from a variety of different sections (each sold separately), allowing a system to be built to suit any site. Barrier legs are flanged as standard (ragged versions are available upon request) and double height leg extensions can be added to provide an additional level of protection.

Options

Order Code	Description	Weight
