Electric Fence

Generated on 02.10.2017

Detailed description

Electric fencing provides a high security solution for premises, factories producing high value or sensitive products, data centres, secure distribution centres etc. The electric fence works by giving a short, sharp but safe electric shock to any intruder who touches it. There is also the obvious visual deterrent. Complies with BS 1722–17.

Electric Fencing - Trophy FT:

The high-level integration of Gallagher's electric perimeter fence security system delivers full configuration, control and monitoring capability for multi-zone, multi-site perimeter security.

- Provides deterrence and fully monitored detection of potential intruders.
- A scalable networked perimeter security solution.
- Configure unlimited, uniquely identified fence zones to facilitate a fast, appropriate alarm response.
- Single management system for central or distributed alarms management across multiple sites.
- Integrated imaging systems for visual record of events.

This superior level of integration allows for the incorporation of a combination of any of the following:

- Perimeter security (electric fence and/or sensors).
- Electronic access control and PhotoID (wireless, data on card, wired and biometric fingerprint).
- Intruder alarms.
- Imaging systems (DVR, NVR, CCTV).
- Building management systems such as air conditioning and lighting.

Standalone Electric Fence - Trophy 6 System:

The Gallagher Trophy Pulse Fence Controller sends regulated electrical pulses along each fence channel with the returning pulses being monitored:

- Any attempt to climb to disable the fence or cut the wire is detected.
- With the ability to identify zones, the Trophy 6 system allows high-voltage zone separation and selectable zone control.
- Features a dedicated intelligent keypad that is the control point of the Trophy 6 system.
- User operations are menu-driven with 'soft keys' to prompt the next step, the functions of which change according to the screen being used. The keypad enables users to set and unset alarms, view the voltage level on the fence zones and view alarm logs. It is specifically designed for ease of use with back-lighting and a large graphic display.

Applications:

- Warehousing.
- High security vehicle storage.
- Power stations.
- Airports.
- Retail, sports and recreation.
- Industrial units.
