

Pier Caps and Spheres

Generated on 02.10.2017

Detailed description

Pier caps are stones that cap piers and gate pillars. A pier cap can be used on its own, or sit underneath a sphere, finial or other feature. From a functional perspective, pier caps help protect the pier or gate pillar from weather damage but are also aesthetically pleasing. Where old piers or gate pillars are being restored, replacing existing natural stone pier caps with cast stone pier caps is the most cost-effective solution. The cast stone replacement with its authentic finish and colour will look as good as natural stone. Procter Cast Stone Pier caps provide a great finishing touch to a gate post, pillar or pier. Standard cast stone pier caps are available, plus bespoke pier caps in any design and to complement existing or new wall copings.

All components are to be fixed with stainless steel dowels and resin.

Options

Type:

A range of cap styles is available to suit pier size – consult manufacturer's literature and insert size/ design requirements.

Spheres:

300 mm diameter spheres can be applied to pier caps 655 x 555 mm and above.
