SAFETY SECURITY PROTECTION

Eye2Eye

Eye2Eye

Introduction

Safetell Eye2Eye is a railway ticket office security window and counterwork module which protects staff from attack and robbery, and provides equality of access for passengers, as required by the disability discrimination act, through a range of features within the product.

Eye2Eye incorporates a moving counter ideal for locations where only a single counter position is possible, or cost effective, allowing all customers to be served from a single universal position.

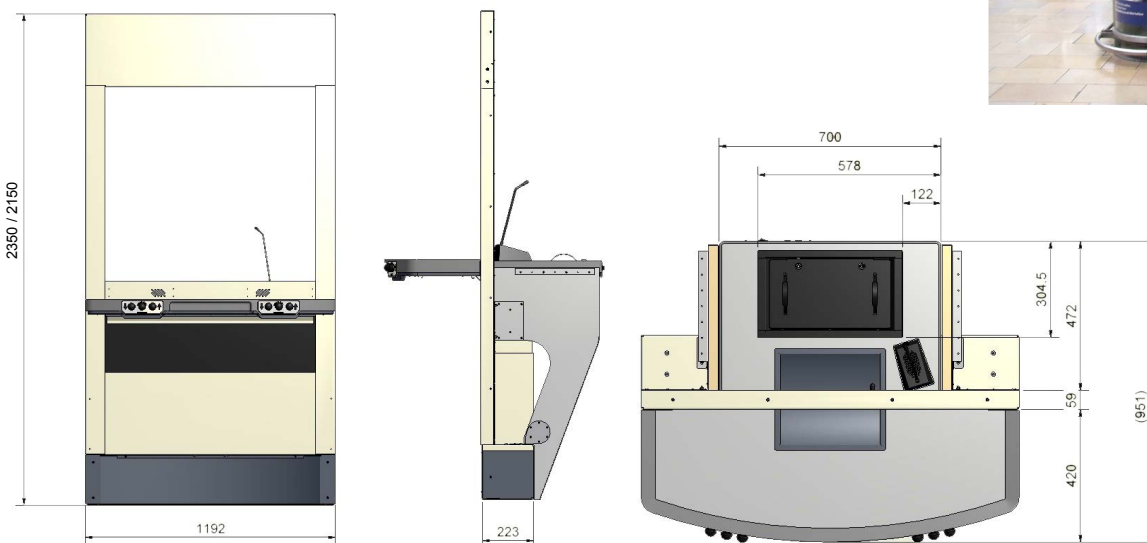

Anti-physical attack or bullet resistant protection versions are available.

Eye2Eye is featured as a product in the Department for Transport code of practice *Accessible Train and Station Design for Disabled People*, and incorporates numerous features to assist passengers with health related travel problems. Among these are sculpted counter edges and cash scoop to assist those with dexterity or muscular problems, induction loop and active speech transfer to aid those with hearing difficulties, contrasting colour schemes to help the partially sighted, adjustable height counter surface to help those with wheelchairs, crutches, walking sticks, and other mobility problems.

The product provides a finished single module solution easily fitted into position at site.
