

Security Doors

Internal Steel Door

Secure Access and Protection

APPLICATIONS

- Local Authorities
- Corporate Offices
- High Street Retailers
- Leisure Facilities
- Government Buildings
- Medical Facilities

PRODUCT DETAILS

Strong and stylish entry and exit doors designed for ease-of-access. Our Internal Steel Doors are available bespoke and made-to-order, and set the standard for steel doors with industry leading specifications, as well as an anti-corrosion guarantee (subject to site location). Our doors are available in polyester powder coating or traditional timber finish and the door blade can be implemented through several options. They are also available in stainless steel.

DIMENSIONS

Single Door Width: 690mm – 1340mm
Double Door Width: 1000mm – 2600mm
Height: 1500mm – 2800mm

WEIGHT

Variable weight depending on specification.

FITTING

Steel Doors can be tailored in accordance with your bespoke requirements.

RESISTANCE

Internal Steel Doors can be custom manufactured as fire rated internal doors and are designed to contain and prevent the spread of fire. Our range of doors can provide protection against fire for up to 60, 120 and 240 minutes respectively, and have been tested to BS 476 Parts 20 and 22, and BS EN 1634.

ACCREDITATION

PERFORMANCE

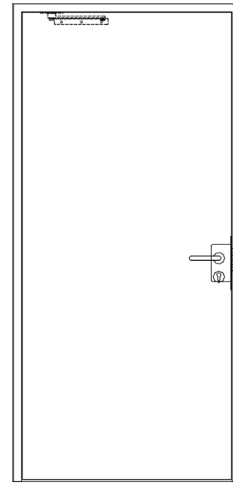

BULLET	
BLAST	
M. ATTACK	✓

DESIGN CONSIDERATIONS

The sleek and flush modern aesthetic allows our Internal Security Doors to be commonly used in situations where traditional timber doors may be used.

Internal Security Doors are available in a range of polyester powder coating colours and woodgrains, as well as having capacity for areas requiring stainless steel with brushed, polished and patterned finishes.

A range of attractive woodgrain PVC laminates are also available, combining the traditional timber aesthetic with the expected modern durability of steel.

SITWORK

The doorsets are supplied fully assembled with hardware fitted as standard which, when combined with our adjustable fixing feet and variable sub-frame, reduces installation time on site, adding value to the end-project.

SERVICE & MAINTENANCE

The single fix design of our doors can offer greater cost savings when priced against overall installation times for timber doors, and the inherent durability of steel means that in areas of high traffic or potential abuse, the lifetime cost of steel doors can be significantly less than timber doors. Safetell's service division provides the UK with complete maintenance call out services for all Safetell products.

HEALTH & SAFETY

Steel Doors must be installed by Safetell's technical specialists into prepared openings. The door blades are constructed using two 1.2mm corrosion resistant steel sheet lock-formed together by two 1mm bonding skins of Aluzinc formed around a rigid honeycomb core using a no-weld construction.

ADDITIONAL INFORMATION

Internal Steel Doors can also be custom manufactured as Acoustic Doors. These acoustic doors are used in many applications to offer privacy and to reduce the transference of noise from one area to another.
