CPM Flow Control Chamber Systems

- **1200mm and 1500mm sealed manhole flow control chamber with cast-in base, headwall and benching**
- **1800mm sealed manhole flow control chamber with cast-in base and headwall**
- **2100mm wide wall one-piece flow control chamber**
- **2000mm to 4000mm sectional flow control chamber**
- **1800mm to 4000mm weir wall and split wall chambers**
- **Integrated pipe tank chamber flow control**
- **Circular inlet/out holes can be formed or cored from 100mm to 1800mm (ID) to suit a variety of pipe materials**
- **Chambers can be pre-fitted with Hydro-Brakes® for storm or foul water, orifice plates, penstocks and non-return flap valves.**

CPM has been at the forefront of precast concrete flow control chamber design and development for over ten years, providing solutions to both standard and complex flow control systems. Today, CPM provides a rapid solution to building flow control chambers, whilst ensuring the highest quality with correctly fitted flow control devices, and are involved in a ground breaking joint venture with Hydro International, who are market leaders of vortex flow devices, such as the Hydro-Brake®. This relationship has culminated with the introduction of Hydro-Brake Optimum® which is pre-fitted into a CPM sealed manhole Hydro-Brake® chamber encompassing the best qualities that each has to offer.

CPM's commitment to a sustainable future includes continuous research and development into storm water management solutions with a dedicated product development team that can offer specialist advice, AutoCAD drawings and a range of precast products that includes solutions for control, storage, rainwater harvesting and treatment, so why spend days constructing a flow control chamber on site when an off-site preformed solution from CPM is available and can be installed in hours not days.
