

CPM Pre-Formed Chamber Systems

CPM Pre-Formed Chamber Systems

- **Sectional systems available from 1800mm to 4000mm diameter**
- **1500mm and 2100mm one-piece chambers in various heights up to 2500mm diameter**
- **Circular inlet/out holes can be formed or cored from 100mm to 1800mm (ID) to suit a variety of pipe materials**
- **Inherent structural strength of concrete**
- **Reduced installation time on site**
- **AutoCAD drawings available upon request**

CPM is leading the way in the innovation of precast concrete off-site development and has developed a precast sectional chamber system for large diameter manholes that includes a cast-in reinforced base and preformed circular inlet/outlet holes to suit any pipe diameter. This system provides a quick solution to building large diameter manholes, whilst promoting a safe working environment within the manhole once assembled to enable any necessary benching. The offsite team is able to offer pre-benched chambers on some diameters depending on weight, for further information please contact our technical team.

CPM's commitment to a sustainable future includes continuous research and development into storm water management solutions with a dedicated product development team that can offer specialist advice, AutoCAD drawings and a range of precast products that includes solutions for control, storage, rainwater harvesting and treatment, so why spend days constructing a chamber on site when an off-site preformed solution from CPM is available and can be installed in hours not days.
