Altro self-adhesive

Altro transport flooring with
self-adhesive backing

altro.co.uk

Altro self-adhesive

The pressure sensitive self-adhesive backing facilitates maximum manoeuvrability and efficiency during installation. Simply position the flooring in the desired location, peel away the release tape and smooth the flooring into place.

Self-adhesive transport floors achieve a bond comparable to traditional adhesives, but do so with almost no VOC emissions.

Altro self-adhesive transport floors perform consistently across all key subfloor variants. It can be laid, bonded, and welded, then walked on immediately.

Since first entering the transport market in 1960, Altro have been driven to create quality, holistic flooring solutions to meet the unique challenges of this diverse industry. So, sticking to form, we have developed a self-adhesive solution to streamline the process of vehicular installations.

Step 1: Backing your decision

Self-adhesive floors utilise a double-sided, pressure sensitive backing system to enhance efficiency. Flooring can be laid with minimal processes, while still providing maximum performance.

Step 2: Universal appeal

Eliminating any need for the mixing of adhesives - and crucially the associated curing times - self-adhesive transport flooring can be installed directly on to all standard subfloors for immediate use to allow engineers to continue work without delay.

Step 3: Hold tight

All existing Altro transport flooring products are available in a self-adhesive format, without any compromise to product performance or compliance. The flexibility of the system also means that it can be

supplied in rolls or precision-cut kits made to the specifications of your vehicles for optimum efficiency.

Selecting a self-adhesive transport floor is a cleaner, more efficient way to achieve consistent, cost effective, high-quality installations for vehicles. It couldn't be simpler. Try it once and you'll stick with it.

Did you know?

All existing Altro transport flooring ranges and designs are available in a self-adhesive format, so you never have to compromise on performance or style.

Streamline installations

Extensive research into the global transport industry has highlighted the negative impact and costs associated with extended vehicle downtime. With this in mind, our self-adhesive solution has been engineered to reduce the number of steps involved in traditional flooring installations. The result is a cleaner, more streamlined process. Once positioned and bonded, self-adhesive flooring can be welded and walked on immediately. This ultimately frees up time to continue assembly and refurbishment work as required, driving efficiencies from the ground up.

Reduce VOC emissions

By using self-adhesive flooring you effectively eliminate the need for traditional, contact and solvent adhesives from the installation process entirely. This ultimately provides two substantial benefits; a greatly streamlined installation with almost no VOC emissions.

Did you know?

Pre-cut self-adhesive flooring kits are a complete solution to enhance efficiency even further by reducing labour and keeping material wastage to the absolute minimum.

Work with all subfloors

Naturally, a key component to achieving heightened efficiency is the capability to meet the specific needs of different vehicles. Altro transport flooring with self-adhesive backing has been successfully tested on all key subfloor variants including plywood, steel and aluminium, performing consistently on all of them.

Save on weight

In addition to lightening the time pressure on installation crews trying to complete intricate projects, Altro self-adhesive has also been proven to remove weight. Unlike traditional bonding agents, our pre-applied acrylic backing offers the advantage of providing a consistent, uniform application of adhesive. In fact, tests show that flooring using the system achieves a minimum adhesive weight saving of 60% per m² when compared to the recommended applications of polyurethane and contact adhesives.

Pre-cut self-adhesive
flooring kits are available

Overcome installation challenges

Because the floor plans of public transport and commuter vehicles are rarely without complexities, the self-adhesive solution has been engineered to cope with the unique and intricate challenges installers can often encounter. The acrylic backing system allows flooring to be applied to both horizontal and vertical surfaces to facilitate installation. So, even in the most challenging areas, a self-adhesive flooring solution keeps your installation heading in the right direction.

Enhanced savings

Because the backing system carries a uniform, tried and tested application of adhesive, it forms a long-lasting bond comparable to traditional adhesives. It achieves this without the need for any manual adhesive application, reducing the labour required and eliminating any potential wastage in the process. The combination of time and cost-saving efficiencies provided by using your preferred Altro flooring in a self-adhesive format can offer significant benefits you'll value for your future projects.

The optimum solution

With fleet downtime coming at a premium, being able to more accurately forecast the duration of an installation is invaluable. Altro self-adhesive, when used in conjunction with customised kits from Altro cutting services – provides an assured installation method that reduces manual processes and can be replicated again and again. By employing this complete installation solution, you can navigate the most direct route through manufacturing or refurbishment projects, driving up productivity in the process.

**Tonny van de Mast,
Planning and
Homologation manager,
Tribus, The Netherlands**

“Using Altro self-adhesive with pre-cut kits will generate a great advantage. It saves us time, providing consistent quality. It is ultimately better for the people that work with it”

Why choose Altro self-adhesive?

- To reduce vehicle downtime and the impact it has on service delivery
- To increase efficiency, but not at the price of performance
- To remove the skilled process of manual adhesive application
- To achieve a consistent, high-quality finish across your entire fleet
- To reduce exposure to VOC emissions

Available for...

- Altro Transflor Meta™
- Altro Transflor Chroma™
- Altro Transflor Figura™
- Altro Transflor Wood™
- Altro Transflor Momentum™
- Altro Transflor Met™
- Altro Transflor Tungsten™
