Product Information

Typical Use

Read the Health, Safety and Environmental Information. Bare or untreated wood should be pre-treated

with an appropriate wood preserver to prevent rot and decay. Surfaces should be dry and free from dirt and algae etc. Remove any algae, lichen, fungi or moss using an appropriate fungicidal wash or cleaner designed for the job.

Composition

Water-based

Key Benefits

One Coat coverage, Easy application - less mess, Quick drying, Water based

Pack size

5L, 6L, 9L

Application Method

Stir thoroughly before use. Try a test area first to ensure that colour and adhesion are acceptable. Please note that the colour in the tub may be different to the final shade when dry. Brush on evenly along the grain. If a deeper colour is required, more coats can be applied. Allow 2-4 hours between coats under normal weather conditions. Product performance will be reduced if applied to grey and weathered smooth wood. Do not apply in temperatures below 5C, in damp conditions or if rain is likely before the product has dried. If using more than one can it is advisable to mix them together in a larger container or finish in a corner before starting a new can.
