

DRAINAGE FOR FOOD & DRINK MANUFACTURING

Drainage is critical to the success of any food and drink manufacturing facility whether you're an international brewer or a manufacturer of ready meals for a major supermarket. It impacts upon the hygienic performance, sustainability and profitability of every food and drink manufacturer, and ultimately upon public health.

We design and manufacture drainage products that deliver the ultimate hygienic performance and our HygieneFirst philosophy underpins our entire approach to product development. This includes a commitment to making ongoing and significant investments in R&D, working in partnership with every part of the industry to improve our own knowledge and adhering to the very highest manufacturing and design standards. We were also the first drainage company to become members of the European Hygienic Engineering and Design Group (EHEDG).

APPLICATIONS

Our products are used by a wide variety of food and drink businesses including breweries, dairies, meat and fish processors, and cheese makers. They are used for applications which include:

- ▶ high risk manufacturing areas
- ▶ washdown areas
- ▶ food and drink preparation areas
- ▶ delivery areas
- ▶ canteens
- ▶ product and ingredient storage facilities
- ▶ refrigeration areas

HygieneFirst

PRODUCT RANGES

- Kitchen / Tray channels
- Stainless Steel Gullies
- Total Flow Gullies
- Modular 125 Channel
- Stainless Steel Kerb
- Access Covers
- Engineered Solutions

CONSTRUCTION SECTORS

Food & Drink
Manufacturing

Commercial
Kitchens

Hotels

Infrastructure

Commercial &
Industrial

Healthcare

Education

Sport & Leisure

Residential

DRAINAGE SYSTEM ASSESSMENTS

We provide free on-site drainage system assessments (DSA) for food or drink manufacturers. Conducted by our in-house team of drainage experts, drainage assessments are designed to help you identify sub-optimal drainage, manage potential areas of risk and optimise the hygienic performance and operational efficiency of the drainage within your food or drink manufacturing facility.

Our team also provides guidance on how to make it easier to clean and maintain your drainage systems and can design new drainage layouts which make fluid removal more efficient.

WHAT ELSE DO WE DO...

In addition to providing hygienically designed, high performance products, we also offer a comprehensive range of services to support you throughout the life of your project and, via our in-house technical design team, can develop engineered solutions which are tailored to meet specific requirements.
