

## THE IMPORTANCE OF LOCKDOWN SYSTEMS

We have seen a recent increase in the number of schools across the UK that have been forced to implement lockdown procedures following various incidence and terrorist threats.

### What is lockdown?

Putting a school in lockdown is a way to protect pupils and staff from unauthorised members of the public accessing the grounds. Or keeping people protected when local incidence occur.

### What can we do?

E.A. Combs provides a wide range of audio over IP devices which allow implementation of your lockdown procedure via

- public address using our gooseneck microphone console.
- pre-set coded announcements via a push button device
- speakers suitable for all environments

Gooseneck microphone

3 watt multidirectional speaker

10 watt outdoor speaker

6 watt durable metal case speaker

### So much more than a lockdown system.

Of course, as important as a lockdown system is to the safety of children and staff we would hope that these procedures are rarely needed. That's why to get the most out of your system it can double up as a PA announcement or even a bell ringing system for class changes.
