

DRAINAGE FOR COMMERCIAL KITCHENS

Drainage is critical to any foodservice business and commercial kitchen operator when it comes to optimising health and safety, operational costs and, of course, hygiene. It's now widely accepted that poor hygiene can be caused as a direct result of bacteria that's present in drainage and drainage should be designed to be as hygienic as possible.

ACO Building Drainage provides a full range of hygienically engineered drainage products to reduce the risk of harmful bacteria being harboured in drainage and, by removing surface liquids from floor areas, prevent the spread of bacteria and reduce the risk of slip-related injuries. We also provide high performance products to prevent the build-up of fats, oils and grease (FOG) in your drainage and the wider sewer system.

APPLICATIONS

Our products are used in a wide variety of commercial kitchen applications including:

- ▶ restaurants
- ▶ hotels
- ▶ pubs and clubs
- ▶ fast food outlets
- ▶ hospital catering
- ▶ staff kitchens in offices and other commercial premises
- ▶ leisure centre catering facilities
- ▶ cafes

HygieneFirst

Our HygieneFirst philosophy reflects our commitment to raising standards across every part of the drainage process from design through to installation, cleaning and ongoing maintenance.

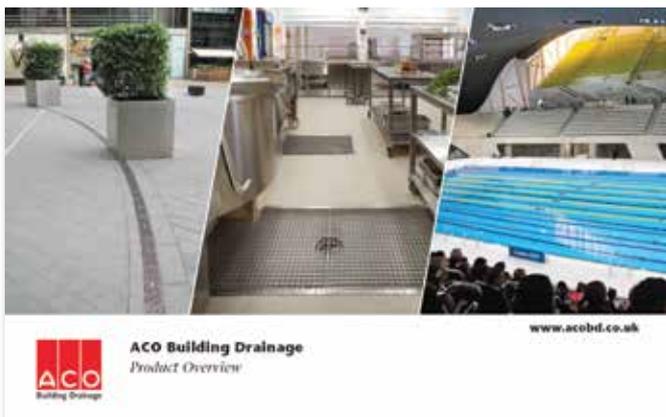

HygieneFirst aims to provide better hygiene outcomes in the areas least considered by operators and is based on five core principles: Hygiene through design based on leading academic research and global best practice; collaboration with suppliers, industry bodies and end users to develop products with market-leading in-situ performance; product improvements for optimal health and safety; the delivery of cost management via product 'cleanability', and significant investment in ongoing and continued innovation.

WHAT ELSE DO WE DO?

In addition to providing hygienically designed, high performance products, we also offer a comprehensive range of services to support you throughout the life of your project and, via our in-house technical design team, can develop engineered solutions which are tailored to meet specific requirements.
